

GLOBAL ASSET ALLOCATION: THE VIEW FROM THE UK

March 2021

MARKET INSIGHTS

As of 28 February 2021

Your Move, Mr. Powell?

After years of muted inflation, investors are becoming concerned as a massive amount of pent-up demand is expected to be unleashed as the economy reemerges in the coming months, bringing higher price pressures. The excess savings that consumers have accumulated over the past year, plus an additional near USD 1.9 trillion fiscal package on the way, could also lead to demand outstripping existing supply, placing upward pressure on prices. As inflation expectations have already breached the 2% threshold, investors are beginning to question the resolve of the Fed to hold monetary stimulus at current levels. So far, Fed Chairman Jerome Powell has repeatedly reiterated a dovish stance, stating that price pressures are likely to be mild and temporary. Until unemployment levels make significant strides toward the Fed's goals, an easy monetary policy appears to be staying in place. Currently, the bond market's recent rise in yields may already be containing inflation for the Fed; however, if rates continue to increase, the Fed may need to step in and take action to rein in longer-term rates.

Yield Score

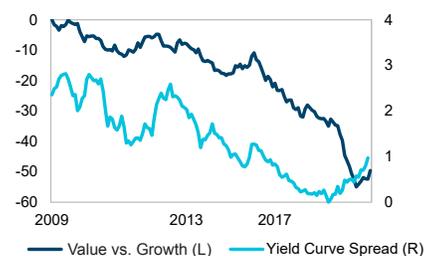

The recent sharp spike in yields is scaring equity investors, who, this time last year, saw the 10-year Treasury yield dip below 1% for the first time. Although rising rates are often a sign of healthy economic growth and should benefit cyclical sectors, such as financials, energy and industrials, they may spell trouble for higher-growth sectors, like technology, that have benefited in an environment of scarce growth and low rates. The high-flying technology sector's extended valuations may become harder to justify amid rising rates. More broadly higher rates could impact borrowing costs for companies and weigh on certain sectors, such as housing, that have benefited from low rates. While historically we are far from yield levels that have negatively impacted stocks, what is unique today is that we are starting from a level of zero policy rates, high-equity valuation levels and the market dominance of technology and related sectors. A further rate rise could challenge broad markets as investors continue to rotate away from higher-growth stocks, such as technology, into more cyclically oriented sectors.

Pedal to the Metal

Commodity markets have climbed to their highest level since 2018 on hopes for a rebound in demand as the global economy reopens and travel resumes later this year. After collapsing in 2020 amid the pandemic-driven shock, oil prices have reached recent highs as demand has gradually recovered, and supply has not kept pace, partially due to supply cut agreements from OPEC+. Industrial metals such as copper have also been on a tear, further supported by a shift in focus toward renewable energy and electric vehicle technology. Some investors are suggesting that the commodity rally may have more durability as the worldwide push for cleaner, greener energy could keep upward pressure on commodities such as copper, platinum and lithium for years to come, many with limited supply. After years of underperformance, a new commodity supercycle could be emerging with cyclical and secular trends finally in their favour, particularly among industrial metals. As inflation expectations continue to rise amid evidence of increasing demand, real assets equities could be poised to outperform broader markets.

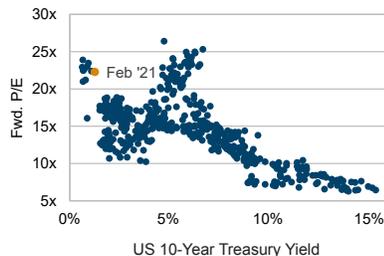

Value vs. Growth and Treasury Yield Spread¹

As of 28 February 2021

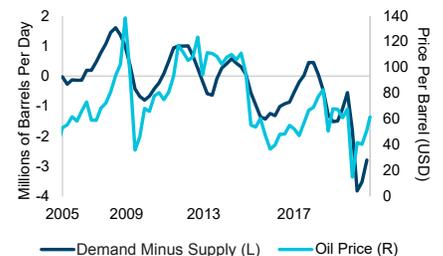

Historical Stock Valuations vs. Interest Rates²

As of 28 February 2021

Oil Demand/Supply and Oil Prices³

As of 28 February 2021

Past performance is not a reliable indicator of future performance.

¹ Value represented by Russell 3000 Value Index. Growth represented by Russell 3000 Growth Index. Treasury yield spread represents the difference between the US 10-year and 2-year Treasury yields.

² Chart represented by monthly data from 31 December 1978 to 28 February 2021. Fwd. P/E represented by the Russell 1000 Index.

³ Demand Minus Supply is based on 12-month averages. Oil Price is represented by Brent crude oil prices.

 **Positives**

 **Negatives**

United Kingdom

- Rapid vaccination means that the economy could return closer to normal by the autumn, potentially two to three months ahead of European Union countries
 - Fiscal support for firms and workers continues to be extended during the second wave
 - The prospect of negative rates has been pushed back by at least six months
 - A Brexit deal has been achieved
- Brexit transition and third lockdown could continue to weigh on economic growth
 - Demand risks from a delayed, but likely very large, fiscal consolidation remain
 - Bank of England has already said negative policy rates remain a prospect should growth not materialise as forecast

Developed Europe

- Higher exposure to more cyclically oriented sectors that should benefit from economic recovery
 - Monetary and fiscal policy remains accommodative
 - Equity valuations remain attractive relative to the US
 - Stronger long-term euro outlook
- Vaccination effort facing supply shortages
 - Limited long-term catalysts for growth
 - Limited scope for European Central Bank (ECB) to stimulate further
 - Brexit likely to negatively impact trade

United States

- More fiscal support on the way
 - Vaccination rollout underway; COVID-19 cases falling
 - Monetary policy remains very accommodative
 - Healthy consumer balance sheets and high savings rate
- Elevated stock and bond valuations
 - Corporate and government debt at high levels
 - US dollar weakness continues
 - Unemployment remains elevated
