Meet Hari Balkrishna
Portfolio Manager, Global Impact Equity Strategy
August 2022

Hari Balkrishna is well equipped to manage the Global Impact Equity Strategy. He believes the market is ready for investors seeking to make a more active and conscious choice to favor companies that can deliver positive environmental and social impact.

Tell us about your background and how you started your investment career.

After finishing my bachelor’s degree, I knew that I wanted to work in asset management as I always loved the accountability and game theory of financial markets but wasn’t quite able to break in right after university. I instead spent four years in investment banking in Sydney, Australia, with Goldman Sachs before deciding that it wasn’t for me and applied to business school—to globalize my knowledge base and to break into professional asset management.

During my time pursuing an M.B.A. at Harvard Business School, I completed a summer internship with T. Rowe Price working as an analyst in the London office. I covered the banking sector, which was undergoing huge change after the global financial crisis in 2008. Upon gaining my M.B.A.,
I accepted a role as an investment analyst at T. Rowe Price covering European and Canadian banks, autos, and real estate.

Prior to my role as portfolio manager for the Global Impact Equity Strategy, I was an associate portfolio manager for the Global Growth Equity Strategy for six years, working with Scott Berg. This was a fantastic grounding in globalizing one’s investment knowledge across sectors, but more importantly in building and deepening working relationships with all our analysts, sector portfolio managers, and diversified portfolio managers around the world.

What attracted you to impact investing?

At a personal level, having lived and worked in five different continents, I have built an appreciation for different social constructs and have always been a passionate believer in solving for climate change.

Can public equity investing really make an impact on key environmental and social concerns, especially compared with private investing?

While impact investing was originally the domain of private investors, we believe the potential to capture and create impact in public equity markets has broadened tremendously over the past decade. Ambitious international and local goals are being set on environmental and social initiatives to directly address risks and promote change. Among them are the UN Sustainable Development Goals (SDG), a globally recognized framework that aims to end poverty, protect the planet, and ensure prosperity. On its own, it is estimated that approximately USD 2.5 trillion of capital will be needed annually until 2030 to achieve the UN SDG objectives.¹

Impact investing also brings a nonfinancial dimension to the investment process—a values-based approach that seeks positive environmental and/or social impact as part of distinct performance targets and is material, measurable, and additional. We believe that impact investing is key to putting investors on the right side of societal and environmental change. Capital can be directly deployed into companies that seek positive impact and are change-enabling. But this has to be combined with fundamental analysis, deep research, and valuation discipline.

Part of my role as an impact portfolio manager is to help individuals and institutions make sense of what’s happening in the world around us and how that could manifest into risks and opportunities within an investment portfolio. For example, as the environmental costs of climate change accelerate, planning for the future and thinking about climate mitigation can genuinely help a company’s bottom line.

As businesses become more conscious and active in aligning capital with the economic returns that can legitimately flow from addressing environmental or social tensions, I expect opportunities to grow. That is important because breadth is a key foundation of consistency and meeting the return objectives of impact investing. In short, we are in an era of growth with respect to the opportunity set of impact stocks, and it is a privilege to help our clients access these opportunities.

From an alpha perspective, we also believe impact-oriented companies can offer better topline and bottom-line growth opportunities than the index. Often these companies have products that are in high demand from consumers, but also have business models that regulators wish to incentivize as we try to achieve net zero targets.

Can an investment manager contribute to positive impact?

Impact is achieved within an investment portfolio in more ways than simply owning and capturing the economics and activities of certain types of companies. It involves directing fresh capital toward desired impact outcomes, alongside impact-oriented company engagement, proxy voting, and the associated influence feedback loop.

As a starting point, we screen companies through an impact lens for both materiality and measurability of the desired outcome. This requires an understanding of a business in the context of a defined impact framework. For us, this is driven by a combination of evaluating a company’s current and future operations and the alignment of earnings or revenues with our impact pillars and the UN SDGs. We use the word “future” very deliberately, given the rapid evolution of many businesses and the need to look forward.

Importantly, as a truly global asset manager, we are ready to supply new capital to areas of target impact. We use our position of ownership to enter into dialogues with companies where we can see the potential to accelerate the good aspects of their operations, while helping to mitigate the negative parts that naturally exist even in the purest of business operations. Change takes time and requires resilience, but this is consistent with many aspects of successful long-term investing.

How does your portfolio differ from the theme/factor of ESG, sustainability, or even impact?

It is important to distinguish that impact investing is not environmental, social, or governance (ESG) integration, and it is also a different discipline from sustainable investing. It incorporates both, but takes it a step further. Impact investing in public equity markets lives in the same domain as other styles of investing. We do not believe there needs to be a sacrifice of return potential, and we believe the opportunity set is unrecognizable from a decade ago. Impact investing is also outward-looking (planet and society) and forward-looking compared with ESG integration and sustainability, which tend to look at a company’s own operations much more.

But impact investing backed by stock picking outcomes requires equal, if not greater, levels of due diligence to avoid excessive concentration, crowding, and disappointment. A forward-looking perspective, a stable and expert research foundation, and a good level of imagination are key features of successful investment processes.

What does the future look like for impact investing?

Change is often born of extremes—and we are living in a period of extremes in many respects. The challenges of our era have created open and broad debate about the rights and freedoms of humankind, the growth in inequality, and the clear and obvious pressures on our environment. To this point, rarely have society and investors mobilized in the way we have seen in the past two years, with clear and raised expectations as to how businesses should conduct themselves in the context of the societies and the environments in which they operate.

We are encouraged by the significance and action businesses are applying to demands for new and improved principles. Companies are innovating in response to society’s demands for solutions to pressing issues, and industry leaders are adapting in recognition of their responsibilities. This has created an increasing number of opportunities to access positive impact within public equity markets.
Share with us your personal interests and how they might (or might not) intersect with your professional work.

I strongly believe in the importance of work-life balance. I have two children with a range of interests, and I enjoy spending as much time with them as possible, especially playing cricket and squash with them. I also love cycling, playing squash, and badminton.

I cochair the London Corporate Responsibility Committee, which is an opportunity to allow T. Rowe Price associates to have an impact on our local communities. It is extremely rewarding work where we can make a real difference to the communities around us. Volunteering and charity work is also a daily reminder of the purpose of impact investing—trying to channel capital toward making a difference and making the world a better place.

Risks—the following risks are materially relevant to the portfolio:

Capital risk—The value of your investment will vary and is not guaranteed. It will be affected by changes in the exchange rate between the base currency of the portfolio and the currency in which you subscribed, if different.

Environment, social and governance and sustainability risk—Due to environmental changes, shifting societal views, and an evolving regulatory landscape related to sustainability issues, the earnings and/or profitability of companies that a portfolio invests in may be impacted.

Equity risk—In general, equities involve higher risks than bonds or money market instruments.

Geographic concentration risk—To the extent that a portfolio invests a large portion of its assets in a particular geographic area, its performance will be more strongly affected by events within that area.

Hedging risk—A portfolio’s attempts to reduce or eliminate certain risks through hedging may not work as intended.

Investment portfolio risk—Investing in portfolios involves certain risks an investor would not face if investing in markets directly.

Management risk—The investment manager or its designees may at times find their obligations to a portfolio to be in conflict with their obligations to other investment portfolios they manage (although in such cases, all portfolios will be dealt with equitably).

Operational risk—Operational failures could lead to disruptions of portfolio operations or financial losses.
