

Global Asset Allocation Viewpoints

March 2021

1 Portfolio Positioning

As of 28 February 2021

Inflation Protection

- Within equities, we added to real assets-related equities, moderating our underweight, as the expected economic recovery fueled by ultra-supportive policies and unleashed pent-up demand could push prices higher in the coming months.
- A similar theme within fixed income, we added to short-term Treasury inflation protected securities (TIPS) from cash on expectations for rising inflation.
- Within developed market equities, we further increased our exposure to Japan, funded from Europe, while remaining underweight U.S. equities. Among developed markets, Japan is highly levered to global trade, which should continue to improve as global economies re-emerge over the coming months.

2 Market Themes

As of 28 February 2021

Your Move, Mr. Powell?

After years of muted inflation, investors are becoming concerned as a massive amount of pent-up demand is expected to be unleashed as the economy re-emerges in the coming months, bringing higher price pressures. The excess savings that consumers have accumulated over the past year, plus an additional near USD 1.9 trillion fiscal package on the way, could also lead to demand outstripping existing supply, placing upward pressure on prices. As inflation expectations have already breached the 2% threshold, investors are beginning to question the resolve of the Fed to hold monetary stimulus at current levels. So far, Fed Chairman Jerome Powell has repeatedly reiterated a dovish stance, stating that price pressures are likely to be mild and temporary. Until unemployment levels make significant strides toward the Fed's goals, an easy monetary policy appears to be staying in place. Currently, the bond market's recent rise in yields may already be containing inflation for the Fed; however, if rates continue to increase, the Fed may need to step in and take action to rein in longer-term rates.

Yield Scare

The recent sharp spike in yields is scaring equity investors, who, this time last year, saw the 10-year Treasury yield dip below 1% for the first time. Although rising rates are often a sign of healthy economic growth and should benefit cyclical sectors, such as financials, energy, and industrials, they may spell trouble for higher-growth sectors, like technology, that have benefited in an environment of scarce growth and low rates. The high-flying technology sector's extended valuations may become harder to justify amid rising rates. More broadly higher rates could impact borrowing costs for companies and weigh on certain sectors, such as housing, that have benefited from low rates. While historically we are far from yield levels that have negatively impacted stocks, what is unique today is that we are starting from a level of zero policy rates, high-equity valuation levels, and the market dominance of technology and related sectors. A further rate rise could challenge broad markets as investors continue to rotate away from higher growth stocks, such as technology into more cyclically oriented sectors.

Pedal to the Metal

Commodity markets have climbed to their highest level since 2018 on hopes for a rebound in demand as the global economy reopens and travel resumes later this year. After collapsing in 2020 amid the pandemic-driven shock, oil prices have reached recent highs as demand has gradually recovered, and supply has not kept pace, partially due to supply cut agreements from OPEC+. Industrial metals such as copper have also been on a tear, further supported by a shift in focus toward renewable energy and electric vehicle technology. Some investors are suggesting that the commodity rally may have more durability as the worldwide push for cleaner, greener energy could keep upward pressure on commodities such as copper, platinum, and lithium for years to come, many with limited supply. After years of underperformance, a new commodity super cycle could be emerging with cyclical and secular trends finally in their favor, particularly among industrial metals. As inflation expectations continue to rise amid evidence of increasing demand, real assets equities could be poised to outperform broader markets.

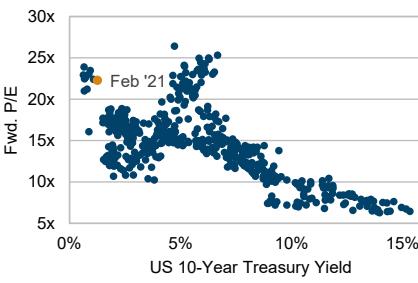

Value vs. Growth & Treasury Yield Spread¹

As of 28 February 2021

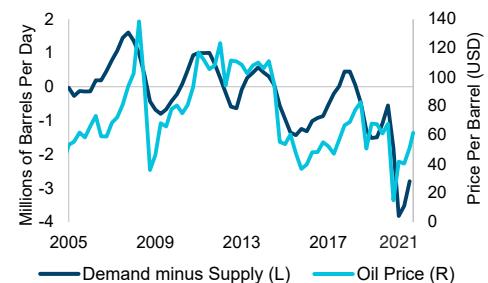

Historical Stock Valuations vs. Interest Rates²

As of 28 February 2021

Oil Demand/Supply & Oil Prices³

As of 28 February 2021

Past performance is not a reliable indicator of future performance.

¹ Value represented by Russell 3000 Value Index. Growth represented by Russell 3000 Growth Index. Treasury Yield Spread represents the difference between the U.S. 10-Year and 2-Year Treasury Yields.

² Chart represented by monthly data from 31 December 1978 to 28 February 2021. Fwd. P/E represented by the Russell 1000 Index.

³ Demand minus Supply is based on 12 month averages. Oil Price represented by Brent crude oil prices.

3 Regional Backdrop

As of 28 February 2021

Positives

United States

- More fiscal support on the way
- Vaccination roll-out under-way, COVID-19 cases falling
- Monetary policy remains very accommodative
- Healthy consumer balance sheets and high savings rate

Negatives

- Elevated stock and bond valuations
- Corporate and government debt at high levels
- U.S. dollar weakness continues
- Unemployment remains elevated

Europe

- Higher exposure to more cyclically oriented sectors that should benefit from economic recovery
- Monetary and fiscal policy remain accommodative
- Equity valuations remain attractive to the U.S.
- Stronger long-term euro outlook

- Vaccination effort facing supply shortages
- Limited long-term catalysts for growth
- Limited scope for European Central Bank to stimulate further
- Brexit likely to negatively impact trade

Developed Asia/Pacific

- Outbreaks milder than in the rest of the world thus far
- Cyclic orientation should benefit from economic rebound
- Strong fiscal and monetary support
- Improving corporate governance

- Weak economic growth going into crisis, driven by long-term demographic headwind
- Limited long-term catalysts for growth

Emerging Markets

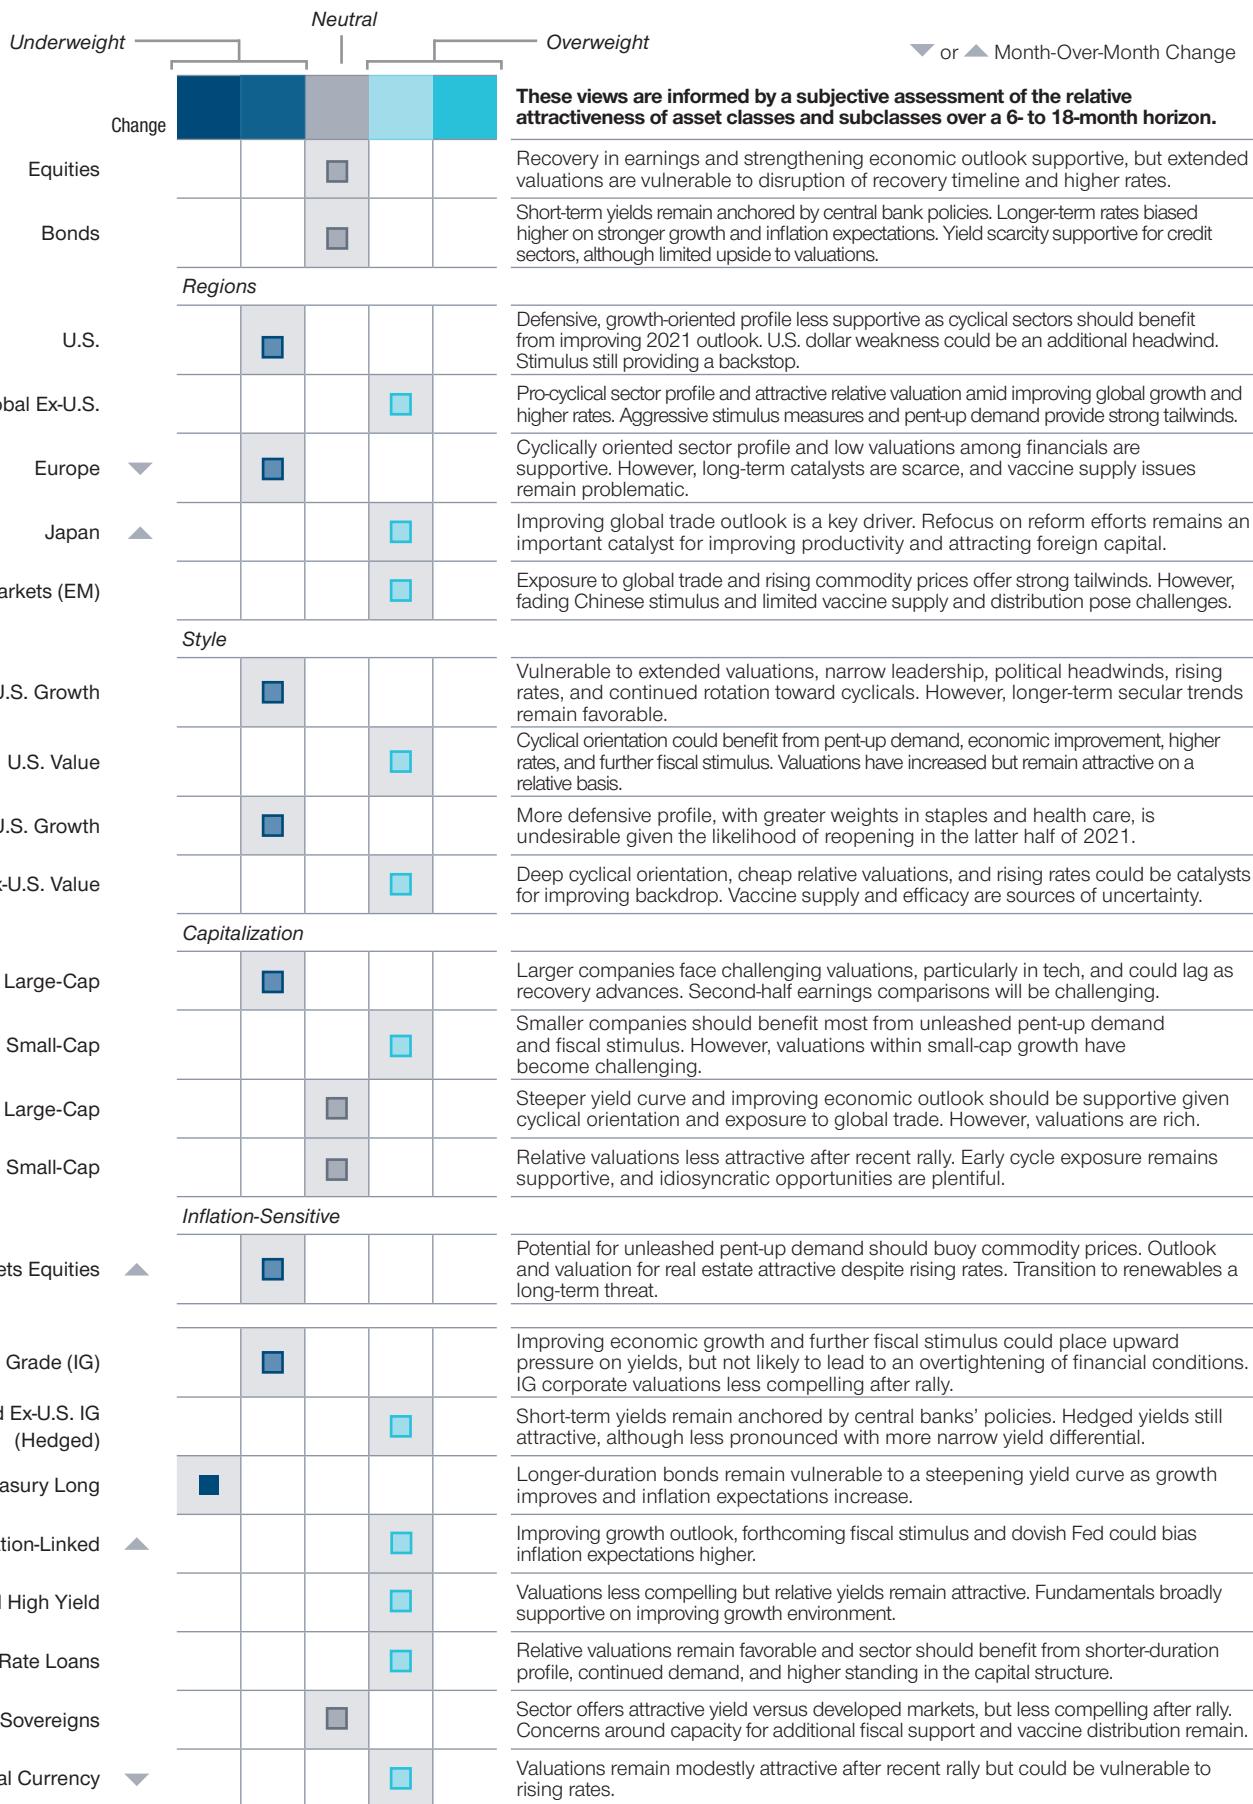

- Exposure to cyclical areas of economy should benefit from broad global recovery
- Chinese economy remains strong
- U.S. dollar weakness continues
- Equity valuations attractive relative to developed markets

- Stimulus from China likely to fade going forward
- Limited ability to enact fiscal stimulus (excluding China)
- Vaccine supply and distribution infrastructure are well behind developed markets

Key risks – The following risks are materially relevant to the information highlighted in this material:

Even if the asset allocation is exposed to different asset classes in order to diversify the risks, a part of these assets is exposed to specific key risks.

Equity risk – in general, equities involve higher risks than bonds or money market instruments.

Credit risk – a bond or money market security could lose value if the issuer's financial health deteriorates.

Currency risk – changes in currency exchange rates could reduce investment gains or increase investment losses.

Default risk – the issuers of certain bonds could become unable to make payments on their bonds.

Emerging markets risk – emerging markets are less established than developed markets and, therefore, involve higher risks.

Foreign investing risk – investing in foreign countries other than the country of domicile can be riskier due to the adverse effects of currency exchange rates; differences in market structure and liquidity, as well as specific country, regional, and economic developments.

Interest rate risk – when interest rates rise, bond values generally fall. This risk is generally greater the longer the maturity of a bond investment and the higher its credit quality.

Real estate investments risk – real estate and related investments can be hurt by any factor that makes an area or individual property less valuable.

Small- and mid-cap risk – stocks of small and mid-size companies can be more volatile than stocks of larger companies.

Style risk – different investment styles typically go in and out of favour depending on market conditions and investor sentiment.
