T. Rowe Price Defined Contribution Plan Data

As of April 2022

COVID-19: TWO YEARS IN

In February 2020, when the markets started reacting to the growing pandemic, there were a lot of questions about the impact COVID-19 would have on the retirement plan industry and the participants who rely on it. Two years later, we have our answer: Some industries have faced unprecedented challenges, but overall, most participants have stayed the course—through labor market changes, market volatility, and the CARES Act.

So now the question is: What does recovery look like? As our newest edition of Reference Point shows, for some

plans in 2021, recovery meant plan design changes to reinstate pre-pandemic features or to stay competitive in an increasingly challenging labor market. Looking forward, some participants may need additional support, especially if they took a large loan or distribution through the CARES Act or tapped into emergency savings.

Here we offer insight to support plan sponsors and guide plan design that can help lead to successful outcomes for participants.

GROWTH DESPITE CHALLENGES

The data highlight encouraging signs observed over the past year, not only from market gains. Plan sponsors and participants took positive steps that show they realize the value of retirement savings programs:

- The percentage of plans offering a match returned to pre-pandemic rates or higher.
- The percentage of participants with outstanding loans decreased from 20% in 2020 to 18.8% in 2021.
- Average employee deferral rates have climbed steadily to an all-time high of 8.5% in 2021.
- Plan participation increased from 67% in 2020 to 68% in 2021.
- After two years at 50%, the percentage of auto-enrollment plans defaulting to 5% or more increased to 52%.
- Market growth contributed to account balance increases across every age group—up 8% from an average of \$113,900 in 2020 to a record high of \$123,500 in 2021.

PLANS HIT HARDEST BY THE PANDEMIC: WHERE ARE THEY NOW?

In response to the pandemic, a small percentage of plans reduced or suspended contribution matches in 2020, with certain industries faring worse than others.

Most plan matches returned in 2021, including for the hard-hit leisure and hospitality and retail trade industries. This support from employers bodes well for participants as they strive to increase their retirement savings, and it signals one more step in the recovery. The match reinstatement may also benefit employers in their efforts to attract and retain talent.

PERCENTAGE OF PLANS WITH MATCH FORMULAS

LEISURE AND HOSPITALITY

RETAIL TRADE

COMBINING AUTO-SOLUTIONS TO HELP ACHIEVE BETTER RESULTS

The percentage of plans offering auto-enrollment climbed from 62.2% in 2020 to 64.4% in 2021, a recovery over the generally flat change from 2019 to 2020, most likely due to the pandemic. This is significant because the participation rate for plans offering auto-enrollment was 85% compared with only 39% for those without auto-enrollment. The percentage of plans with auto-increase continued its upward trend since 2015, reaching an all-time high of 84%. Auto-reenrollment—a tool plans can use for employees that have not taken action on their own—remained steady at 14% of plans in 2021, with the success rate returning to its typical level of 78% after a slight dip to 77% in 2020.

Auto-services vs. No Auto-services

While it's not surprising that auto-solutions can lead to increased participation and savings, the data continue to illustrate the value of their adoption in tandem. When comparing plans that implement both auto-enrollment and auto-increase with plans that do not elect these services, the difference is significant. Plans that couple auto-enrollment and auto-increase together achieve an 85% participation rate compared with only 29% for those that do not offer the services—nearly three times greater participation. In addition, participants in plans with both auto-enrollment and auto-increase are saving 5% more than those in plans that did not adopt the solutions: an average pretax deferral rate of 7.8% versus 7.4%.

DEFERRALS CONTINUE TO RISE

Average employee deferrals have continued to climb steadily over the last 10 years to a rate of 8.5% in 2021. Deferral rates have generally exceeded the match ceiling and auto-enrollment default rate, demonstrating that participants recognize the importance of saving for retirement. Roth deferrals continued their growth, with 83% of plans offering this option in 2021. Among plans that offer the option, participant usage of Roth has increased 57% since 2018, perhaps a sign of greater financial education.

57%

Participant usage of Roth deferrals has increased 57% since 2018

DEFAULT DEFERRAL RATES

Plans are continuing to support participants by offering higher default deferral rates through their auto-enrollment. While the number of plans that offered a 6% or greater default rate remained steady at 36%, the number of plans offering a 5% default deferral increased from 14% to 16% in 2021. This continues the trend upward for the 5% rate since 2018. The adoption of these default rates indicates that plan sponsors recognize the importance of starting participants at a higher rate in order to help them accumulate savings faster.

In addition to plans edging default deferral rates higher to put participants on the path to greater savings, participants themselves are also taking positive steps to increase their deferrals. In 2021, 6.9% of participants increased their default deferral rate, while only .8% decreased from the default. This may indicate that participants can tolerate higher defaults and, as evidenced by the data, will still take action to increase deferrals. This data may also support the decision to offer auto-enrollment at higher default rates to help create more positive outcomes.

Auto-enrollment

THE CASE FOR AUTO-ENROLLMENT

To demonstrate the correlation between auto-enrollment and increased participation rates, we looked back at plans that had been with T. Rowe Price for more than five years and had adopted auto-enrollment for the first time in 2017. By 2021, these plans experienced a 20-percentage-point increase in participation while similarly tenured plans that did not adopt auto-enrollment only grew by three percentage points.

We then reviewed the data from plans new to T. Rowe Price in 2021 and found striking results. Plans that included auto-enrollment in their design have achieved participation rates of 84%, while those not opting for the service have only a 24% participation rate.

This analysis shows that auto-enrollment is an effective tool for plans wanting to increase participation in order to help drive better outcomes for participants.

Five-Year Comparison

THE EFFECTIVENESS OF AUTO-INCREASE USING THE OPT-OUT APPROACH

The data from the past 10 years present strong evidence that the opt-out approach for auto-increase (when participants are enrolled in auto-increase automatically) is far more effective than the opt-in approach that requires participants to voluntarily elect auto-increase. After holding steady for the past two years, the percentage of plans offering auto-increase using the opt-out method edged up to 48% in 2021.

In 2021, participation in auto-increase was 65% in plans that used the opt-out approach compared with only 11% for plans using the opt-in approach. This is evidence that choosing the opt-out approach as the standard in plan design is an effective nudge to help improve participant saving behaviors.

LOAN ACTIVITY

When looking at participant loan behavior in 2021 and comparing it with 2020, there are variables to keep in mind. For example, in 2021, coronavirus-related distributions were no longer available, and some participants may have seen their income return to more typical levels after lockdowns which may have resulted in reduced income the previous year.

In 2021, the percentage of participants with outstanding

loans decreased to 18.8%, from 20.0% the previous year. Of those participants with loans, the percentage of participants with multiple loans also declined. However, and possibly due to higher available account balances, the average participant loan balance increased to an average of \$9,663. Participants between the ages of 40 and 60 years old continued to hold the highest percentage of loans and outstanding balances, likely due to their competing financial priorities.

Average Participant Loan Balances — By Age

■ 2021

LOANS: PLAN DESIGN CONSIDERATIONS

What can we learn by digging into plan design and the possible relationship between loan availability, participant behaviors, and retirement savings? Plans that allow more than two loans tend to have lower savings rates—dropping from an average deferral of 7.9% to 6.8%. Allowing a greater number of loans is also correlated with higher average loan balances: \$10,162 for one loan, \$12,424 for two loans, and \$13,698 for three or more loans.

Surprisingly, simply offering participants the option of multiple loans does not impact how many participants will act upon it. On average, in plans that allow participant

loans, approximately 19% of the participant population will take a loan. This stays fairly consistent between plans that allow one, two, or three or more loans.

Given the potential negative impact that allowing multiple loans has on savings, plan sponsors could consider limiting them to one outstanding loan per participant. This could still help satisfy the participant need while also helping to limit the possibility of loans being used for less essential reasons. Increasing employee education and taking advantage of T. Rowe Price financial wellness resources could also help lead to improved participant behavior.

LOOKING FORWARD

The data from 2021 show us that sponsors and participants continue to understand the value of retirement savings programs. There is still a need for financial wellness programs to help participants manage challenges without losing sight of their long-term goals. Continued adoption of plan design best practices can help drive increased participation and savings rates.

PLAN SPONSOR CONSIDERATIONS TO SUPPORT PARTICIPANTS

In our 2022 Retirement Market Outlook, we introduced three themes—Access and Adequacy, Financial Wellness, and The Investment Landscape—shaping the retirement landscape, and how the industry can respond to address them. The data presented here point even more to the opportunities for plan sponsors to help participants stay on course for retirement despite the challenges they face.

Access and Adequacy

- Use auto-enrollment and auto-increase together to help participants save more.
- Increase the auto-enrollment default rate to help participants reach 15% faster.
- Use the opt-out auto-increase method to keep more participants enrolled in the service.
- Deliver targeted communications to keep participants engaged with the plan and to encourage nonparticipants to enroll.

Financial Wellness

- Limit the number of loans allowed to encourage participants to keep money in the plan.
- Provide financial wellness solutions to educate participants and foster positive financial habits.

The Investment Landscape

- Provide educational resources to help participants maintain a long-term investment perspective and proper asset allocation.
- Consider target date strategies as the qualified default investment alternative (QDIA) or as part of a QDIA reenrollment to help manage asset allocation risk along with other options such as managed accounts.

No.56

PERCENTAGE OF PARTICIPANTS WITH LOANS—SINGLE VS. MULTIPLE

	2017	2018	2019	2020	2021
Percent of Loan Participants with a Single Loan	85.0%	85.0%	86.0%	88.7%	89.6%
Percent of Loan Participants with Multiple Loans	15.0%	15.0%	14.0%	11.3%	11.4%

No.57 **AVERAGE PARTICIPANT LOAN BALANCES—BY AGE**

	2019	2020	2021
Age Range			
< 20 Years	\$1,004	\$1,369	\$1,080
20 - 29 Years	3,906	3,966	4,345
30 - 39 Years	8,046	8,049	8,180
40 - 49 Years	10,582	10,640	10,652
50 - 59 Years	11,255	11,323	11,216
60 - 64 Years	9,888	9,909	9,981
65 - 69 Years	8,450	8,886	9,283
70+ Years	8,173	8,036	8,278
Total	9,525	9,612	9,663

The data set includes only plans that allow at least one loan.

No.58 PERCENTAGE OF PARTICIPANTS WITH OUTSTANDING LOANS—BY AGE

	2019	2020	2021
Age Range			
< 20 Years	0.2%	0.1%	0.2%
20 - 29 Years	9.6	7.8	7.3
30 - 39 Years	24.0	21.0	19.7
40 - 49 Years	30.2	27.1	25.6
50 - 59 Years	27.5	25.1	24.0
60 - 64 Years	18.9	17.6	16.5
65 - 69 Years	12.7	11.6	10.9
70+ Years	7.8	7.4	6.8
Total	22.5	20.0	18.8

The data set includes only plans that allow at least 1 loan.

No.59 MAXIMUM NUMBER OF LOANS ALLOWED

	2019	2020	2021
1—Any Type*	58%	60%	60%
2—Any Type*	37	36	36
3—Any Type*	3	2	2
More Than 3—Any Type*	2	2	2
No Limit—Any Type*	1	1	1

* Any type—plan may offer primary residence, standard, or both loan types.
The data set includes only plans that allow at least 1 loan.

Numbers may not total 100% due to rounding.

No. 60 PARTICIPANT DISTRIBUTIONS—DIRECT ROLLOVERS VS. CASH-OUTS

	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021
Percentage of Direct Rollovers	75%	76%	78%	78%	81%	81%	74%	81%	65%	83%
Percentage of Cash-Outs	25%	24%	22%	22%	19%	19%	26%	19%	35%	17%

No.61 PARTICIPANT DISTRIBUTIONS—BY AGE

Age Range	Percentage of Direct Rollovers	Percentage of Cash-Outs
(< 20)	42%	58%
20 - 29	63	37
30 - 39	74	26
40 - 49	82	18
50 - 59	86	14
60 - 64	85	15
65 - 69	88	12
70 +	70	30
Total	83	17

No.62 PERCENTAGE OF PARTICIPANT ROLLOVER COMPARISON—BY AGE

	2019	2020	2021
Age Range			
< 20	25%	29%	42%
20 - 29	54	34	63
30 - 39	68	37	74
40 - 49	77	48	82
50 - 59	84	64	86
60 - 64	83	80	85
65 - 69	87	85	88
70+	73	78	70
Total	81	65	83

Methodology

Unless otherwise noted, all data included in this report are drawn from the following sources: Data are based on the large-market, full-service universe—T. Rowe Price total—of T. Rowe Price Retirement Plan Services, Inc., retirement plans (401(k) and 457 plans), consisting of 660 plans and over 2 million participants.

Auto-enrollment, auto-increase, and default deferral rate results are based on participants of large-market, full-service 401(k) and 457 plans who were automatically enrolled in their plan during 2021. Trend results are based on findings at the calendar year-end from 2012 to 2021.

Auto-reenrollment—An automatic reenrollment for participants who opted not to participate in their plan. This is run on-demand and could occur about once a year.

Auto-restart—For participants who were contributing to their plan and have taken a hardship withdrawal. Once the suspension period is over, participants will have their contributions automatically restarted unless they opt out.

Auto-rebalance—Provides participants with the tools they need to maintain a consistent investment strategy. If they are not investing 100% of their account in a diversified fund, auto-rebalance will automatically rebalance their account on a periodic basis (e.g., quarterly or annually).

Participation rates by age are participant weighted (total number of participants divided by the total number eligible to participate). Participant-weighted year-over-year participation rate averages are calculated by dividing the number of participants by the number eligible to participate. The plan-weighted year-over-year participation rate average is the sum of plan-level averages divided by the number of plans.

Results for participant age breakdowns are based on the number of participants who made Roth contributions during the calendar year periods ended December 31, 2012, through December 31, 2021. These data capture the number of eligible participants in plans that offer Roth contributions at each calendar year-end from December 31, 2012, through December 31, 2021.

Methodology

The data are based on any participants who are eligible to make contributions during the period. Participation results are based on all contributions. Participation rates by age are participant weighted (total number of participants divided by the total number eligible to participate).

Employee and employer contributions are based on plans with contributions during the calendar years ended December 31, 2012, through December 31, 2021. Employer contributions include all types of employer money, such as matching contributions, discretionary contributions, and retirement contributions. Match percentages are the maximum percentage of participant contributions that a company will match. Company vesting percentages shown are an aggregated count of those plans and plan locations that have identifiable vesting schedules for reporting purposes.

Deferral results are based on employee pretax deferral percentages greater than zero for eligible participants over various time periods from calendar years ended December 31, 2012, through December 31, 2021. Average deferral by age is participant weighted (total of all participant deferral percentages divided by the total number of participants with a deferral percentage).

Catch-up contribution results for participant age breakdowns are based on the number of participants who made catch-up contributions during the various calendar year periods ended December 31, 2012, through December 31, 2021. These data capture the number of eligible participants over age 50 in plans that offer catch-up contributions.

Roth qualified distribution—A qualified distribution is tax-free if taken at least five years after the year of your first Roth contribution AND you have reached age 59½, become totally disabled, or died. If your distribution is not qualified, any earnings from the Roth portion will be taxable in the year it is distributed. These rules apply to Roth distributions only from employer-sponsored plans. Additional plan distribution rules apply.

Loan availability and usage results are based on active participants with outstanding loan balances at calendar years ended December 31, 2012, through December 31, 2021. Participant loans are limited to plans that offer loans. Hardship withdrawal data represent all hardship withdrawals from qualified 401(k) and 457 plan types at calendar years ended December 31, 2012, through December 31, 2021.

Methodology

Distribution data represent all distributions and hardship withdrawals from qualified 401(k) and 457 plan types for various time periods from calendar years ended December 31, 2012, through December 31, 2021. The rollover/cash-out percentage is based on the amount of assets cashed out or rolled out of a retirement plan account for any participant, including both active and terminated, during the calendar year ended December 31, 2021.

Throughout Reference Point, the reader will see year-over-year changes expressed as a percentage change (e.g., 25% increase). For example: If the deferral rate was 7.8% in 2020, and the deferral rate was 7.6% in 2019, this would be a 3% increase. In the same example, the percentage point movement would be .2. We have not used percentage point movement in this document except where noted.
