Reference Point

Real data and actionable insights—
to help retirement leaders deliver better outcomes

2025

Introduction

T. Rowe Price develops the annual Reference Point report to identify relevant participant trends and to highlight potential opportunities and solutions.

As always, our purpose in delivering this extensive report is to help plan sponsors and financial consultants improve financial outcomes for their participants and their plans.

This report breaks down data and findings from more than 2 million active workplace retirement plan participants with T. Rowe Price as their recordkeeper.

Percentage of plans that have adopted auto-enrollment and auto-increase

Auto-enrollment default deferral rate

Year-over-year change in auto-enrollment default deferral rates

	2023	2024
<3%	0.4%	0.1%
3%	-1.1%	1.4%
4%	1.6%	-2.1%
5%	-0.3%	-0.2%
6%+	-0.5%	0.5%

Results for auto-enrollment are based on those plans that offer the feature.
Numbers are rounded and may not equal 100%.

Auto-enrollment default deferral rate enrollment percentage with percent of participants increasing or decreasing default

Methodology

Unless otherwise noted, all data included in this report are drawn from the following sources: Data are based on the large-market, full-service universe—T. Rowe Price total—of T. Rowe Price Retirement Plan Services, Inc., retirement plans (401(k) and 457 plans), consisting of 692 plans and approximately 2 million participants.

Auto-enrollment, auto-increase, and default deferral rate results are based on participants of large-market, full-service 401(k) and 457 plans who were automatically enrolled in their plan during 2024. Trend results are based on findings at the calendar year-end from 2015 to 2024.

Auto-reenrollment—An automatic reenrollment for participants who opted not to participate in their plan. This is run on demand and could occur about once a year.

Auto-restart—For participants who were contributing to their plan and have taken a hardship withdrawal. Once the suspension period is over, participants will have their contributions automatically restarted unless they opt out.

Auto-rebalance—Provides participants with the tools they need to maintain a consistent investment strategy. If they are not investing 100% of their account in a diversified fund, auto-rebalance will automatically rebalance their account on a periodic basis (e.g., quarterly or annually).

Participation rates by age are participant weighted (total number of participants divided by the total number eligible to participate). Participant-weighted year-over-year participation rate averages are calculated by dividing the number of participants by the number eligible to participate. The plan-weighted year-over-year participation rate average is the sum of plan-level averages divided by the number of plans.

Results for participant age breakdowns are based on the number of participants who made Roth contributions during the calendar year periods ended December 31, 2015, through December 31, 2024. These data capture the number of eligible participants in plans that offer Roth contributions at each calendar year-end from December 31, 2015, through December 31, 2024.

Methodology

The data are based on any participants who are eligible to make contributions during the period. Participation results are based on all contributions. Participation rates by age are participant weighted (total number of participants divided by the total number eligible to participate).

Employee and employer contributions are based on plans with contributions during the calendar years ended December 31, 2015, through December 31, 2024.

Employer contributions include all types of employer money, such as matching contributions, discretionary contributions, and retirement contributions. Match percentages are the maximum percentage of participant contributions that a company will match. Company vesting percentages shown are an aggregated count of those plans and plan locations that have identifiable vesting schedules for reporting purposes.

Deferral results are based on employee pretax deferral percentages greater than zero for eligible participants over various time periods from calendar years ended December 31, 2015, through December 31, 2024. Average deferral by age is participant weighted (total of all participant deferral percentages divided by the total number of participants with a deferral percentage).

Catch-up contribution results for participant age breakdowns are based on the number of participants who made catch-up contributions during the various calendar year periods ended December 31, 2015, through December 31, 2024. These data capture the number of eligible participants over age 50 in plans that offer catch-up contributions.

Roth qualified distribution—A qualified distribution is tax-free if taken at least five years after the year of your first Roth contribution AND you have reached age 59½, become totally disabled, or died. If your distribution is not qualified, any earnings from the Roth portion will be taxable in the year it is distributed. These rules apply to Roth distributions only from employer-sponsored plans. Additional plan distribution rules apply.

Loan availability and usage results are based on active participants with outstanding loan balances at calendar years ended December 31, 2015, through December 31, 2024. Participant loans are limited to plans that offer loans. Hardship withdrawal data represent all hardship withdrawals from qualified 401(k) and 457 plan types at calendar years ended December 31, 2015, through December 31, 2024.
