16 Describe the calculation of the change in basis and the data that supports the calculation, such as the market values of securities and the valuation dates ▶

A tax return of capital occurs when a fund pays out more in distributions than its current and accumulated earnings and profits determined for tax purposes. Due to events after the relevant distribution dates, the fund determined that the distributions paid have exceeded its current and accumulated earnings and profits for the relevant taxable year. The excess represents a tax return of capital by the fund, instead of a distribution.
