Dynamic Global Bond:

An Intentionally Different Approach to Fixed Income

Arif Husain
Head of International Fixed Income

September 2023

Today’s Speaker

Arif Husain

Head of International Fixed Income and Chief Investment Officer

Why the Dynamic Global Bond Capability?

In collaboration with our clients, we designed the Dynamic Global Bond Strategy to seek **a regular and consistent return stream** that could help anchor their portfolio performance in times of equity volatility **regardless of the directionality of interest rates**.

Our Goals

Sustainable Performance

Seeks modest and repeatable outperformance; Controlled risk profile with bond-like volatility

Downside risk management

Focuses on downside risk from potential rise in interest rates

Diversification

Low correlation with risky markets during periods of risk aversion

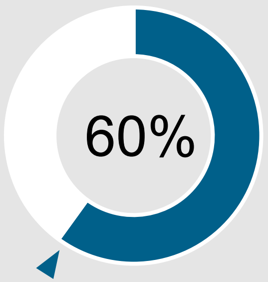
T. Rowe Price Dynamic Global Bond Strategy

What you will own—An actively managed, diversified global sovereign bond portfolio with **opportunistic currency and credit allocations designed to seek to enhance performance and risk**.

Expected Contribution of Value Added

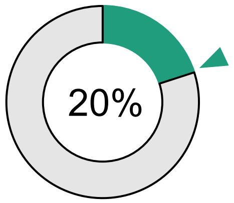
Country/Duration Management

Active global interest rate and curve management
Duration range between -1 and 6 years



Currency Management

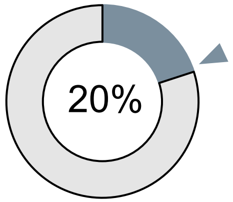
Automatically hedged with a limited currency overlay



Sector Allocation/Security Selection

Credit including Investment grade, High yield, emerging markets and asset backed securities

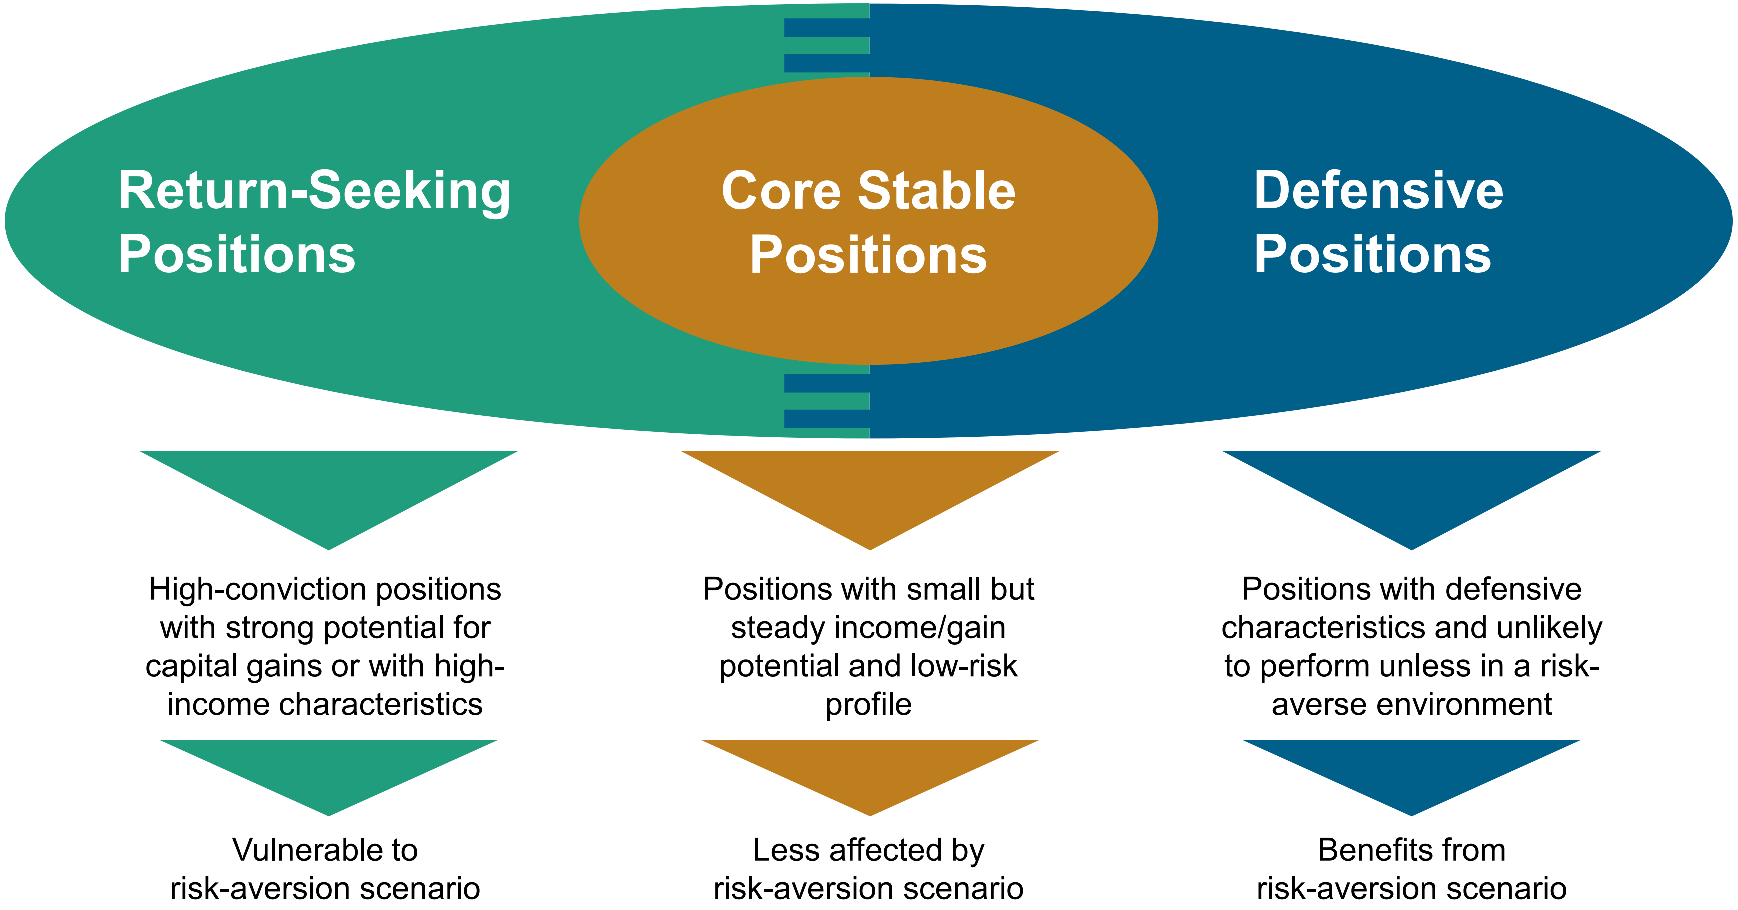
Maximum 30% non-investment grade



Performance and Risk Parameters

Cash Index	TE/Volatility Target
ICE BofA US 3-Month Treasury Bill Index or equivalent	**200–500 bps volatility p.a.**

Portfolio Construction Approach



Positions sized to reflect conviction, liquidity, risk/return expectation and risk skew.

Goal: Downside Risk Management

As of 30 June 2023

Return Analysis—Dynamic Global Bond (USD Hedged) Representative Portfolio

During Periods of Negative Equity Returns <-5%*

	S&P 500 Index Performance	Representative Portfolio
31 July 2015 – 30 September 2015	-8.36%	-0.89%
30 November 2015 – 31 January 2016	-6.47%	0.36%

Past performance is not a reliable indicator of future performance.
Gross performance returns are presented before management and all other fees, where applicable, but after trading expenses. Net of fees performance reflects the deduction of the highest applicable management fee that would be charged based on the fee schedule contained within this material, without the benefit of breakpoints. Gross and net performance returns reflect the reinvestment of dividends and are net of all non-reclaimable withholding taxes on dividends, interest income, and capital gains. Figures calculated in U.S. Dollars. ₳ Since Inception 31 January 2015 through 31 December 2015. ‡‡ Effective 1 May 2021, the benchmark for the composite changed to ICE BofA US 3-Month Treasury Bill Index. Prior to 1 May 2021 the benchmark was the 3 Month LIBOR in USD Index. Historical benchmark representations have not been restated. * The Value Added row is shown as Dynamic Global Bond (USD Hedged) Composite minus the benchmark in the previous row. Please see Additional Disclosures page for information about this ICE BofA information.

Reasons 'NOT' to be Cheerful

Expansion of BRICS[1]

Poor China-US relations

US election (possible return of Trump)

Ongoing Russia/Ukraine conflict

Climate change

BRICS is a grouping of the world economies of Brazil, Russia, India, China, and South Africa.

Dynamic Global Bond Strategy
Main Risks

The following risks are materially relevant to the strategy:

- **ABS and MBS** – Asset-Backed Securities (ABS) and Mortgage-Backed Securities (MBS) may be subject to greater liquidity, credit, default and interest rate risk compared to other bonds. They are often exposed to extension and prepayment risk.
- **Contingent convertible bond** – Contingent Convertible Bonds may be subject to additional risks linked to: capital structure inversion, trigger levels, coupon cancellations, call extensions, yield/valuation, conversions, write downs, industry concentration and liquidity, among others.
- **Credit** – Credit risk arises when an issuer's financial health deteriorates and/or it fails to fulfill its financial obligations to the fund.
- **Currency** – Currency exchange rate movements could reduce investment gains or increase investment losses.
- **Default** – Default risk may occur if the issuers of certain bonds become unable or unwilling to make payments on their bonds.
- **Derivative** – Derivatives may be used to create leverage which could expose the fund to higher volatility and/or losses that are significantly greater than the cost of the derivative.
- **Emerging markets** – Emerging markets are less established than developed markets and therefore involve higher risks.
- **High yield bond** – High yield debt securities are generally subject to greater risk of issuer debt restructuring or default, higher liquidity risk and greater sensitivity to market conditions.
- **Interest rate** – Interest rate risk is the potential for losses in fixed-income investments as a result of unexpected changes in interest rates.
- **Issuer concentration** – Issuer concentration risk may result in performance being more strongly affected by any business, industry, economic, financial or market conditions affecting those issuers in which the fund's assets are concentrated.
- **Liquidity** – Liquidity risk may result in securities becoming hard to value or trade within a desired timeframe at a fair price.
- **Prepayment and** extension – Mortgage- and asset-backed securities could increase the fund's sensitivity to unexpected changes in interest rates.
- **Sector concentration** – Sector concentration risk may result in performance being more strongly affected by any business, industry, economic, financial or market conditions affecting a particular sector in which the fund's assets are concentrated.
- **Total return swap** – Total return swap contracts may expose the fund to additional risks, including market, counterparty and operational risks as well as risks linked to the use of collateral arrangements.

Dynamic Global Bond Strategy
Risks (Continued)

General Portfolio Risks

- **Counterparty** – Counterparty risk may materialise if an entity with which the fund does business becomes unwilling or unable to meet its obligations to the fund.
- **ESG and sustainability** – ESG and Sustainability risk may result in a material negative impact on the value of an investment and performance of the fund.
- **Geographic concentration** – Geographic concentration risk may result in performance being more strongly affected by any social, political, economic, environmental or market conditions affecting those countries or regions in which the fund's assets are concentrated.
- **Hedging** – Hedging measures involve costs and may work imperfectly, may not be feasible at times, or may fail completely.
- **Investment fund** – Investing in funds involves certain risks an investor would not face if investing in markets directly.
- **Management** – Management risk may result in potential conflicts of interest relating to the obligations of the investment manager.
- **Market** – Market risk may subject the fund to experience losses caused by unexpected changes in a wide variety of factors.
- **Operational** – Operational risk may cause losses as a result of incidents caused by people, systems, and/or processes.

Goal: Downside Risk Management

1 The fee rate used to calculate net returns is 0.92%. This represents the maximum fee rate applicable to all composite members. **Past performance is not a reliable indicator of future performance.**
2 January 31, 2015 through December 31, 2015.
3 Effective May 1, 2021, the benchmark for the composite changed to the ICE BofA US 3-Month Treasury Bill Index. Prior to this change, the benchmark was the 3 Month LIBOR in USD Index. The change was made because the firm viewed the new benchmark to be a better representation of the investment strategy of the composite. Historical benchmark representations have not been restated..
4 Preliminary - subject to adjustment.

T. Rowe Price (TRP) claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS standards. TRP has been independently verified for the 26-year period ended June 30, 2022 by KPMG LLP. The verification report is available upon request. A firm that claims compliance with the GIPS standards must establish policies and procedures for complying with all the applicable requirements of the GIPS standards. Verification provides assurance on whether the firm's policies and procedures related to composite and pooled fund maintenance, as well as the calculation, presentation, and distribution of performance, have been designed in compliance with the GIPS standards and have been implemented on a firm wide basis. Verification does not ensure the accuracy of any specific composite presentation.
TRP is a U.S. investment management firm with various investment advisers registered with the U.S. Securities and Exchange Commission, the U.K. Financial Conduct Authority, and other regulatory bodies in various countries and holds itself out as such to potential clients for GIPS purposes. TRP further defines itself under GIPS as a discretionary investment manager providing services primarily to institutional clients with regard to various mandates, which include U.S., international, and global strategies but excluding the services of the Private Asset Management group. As of October 1, 2022, there is no minimum asset level for portfolio inclusion into the composite. Prior to October 2022, the minimum asset level for equity portfolios to be included in composites was $5 million and prior to January 2002 the minimum was $1 million. The minimum asset level for fixed income and asset allocation portfolios to be included in composites was $10 million; prior to October 2004 the minimum was $5 million; and prior to January 2002 the minimum was $1 million. Valuations are computed and performance reported in U.S. dollars.
Gross performance returns are presented before management and all other fees, where applicable, but after trading expenses. Net of fees performance reflects the deduction of the maximum fee rate applicable to all composite members as shown above. Gross performance returns reflect the reinvestment of dividends and are net of nonreclaimable withholding taxes on dividends, interest income, and capital gains. Gross performance returns are used to calculate presented risk measures. Effective June 30, 2013, portfolio valuation and assets under management are calculated based on the closing price of the security in its respective market. Previously portfolios holding international securities may have been adjusted for after-market events. Policies for valuing portfolios, calculating performance, and preparing compliant presentations are available upon request. Dispersion is measured by the standard deviation across asset-weighted portfolio returns represented within a composite for the full year. Dispersion is not calculated for the composites in which there are five or fewer portfolios.
Some portfolios may trade futures, options, and other potentially high-risk derivatives that may create leverage and generally represent in aggregate less than 10% of a portfolio.
Benchmarks are taken from published sources and may have different calculation methodologies, pricing times, and foreign exchange sources from the composite.
Composite policy requires the temporary removal of any portfolio incurring a client initiated significant cash inflow or outflow greater than or equal to 15% of portfolio assets. The temporary removal of such an account occurs at the beginning of the measurement period in which the significant cash flow occurs and the account re-enters the composite on the last day of the current month after the cash flow. Additional information regarding the treatment of significant cash flows is available upon request.
The firm's list of composite descriptions, a list of limited distribution pooled fund descriptions, and a list of broad distribution pooled funds are available upon request. GIPS® is a registered trademark of CFA Institute. CFA Institute does not endorse or promote this organization, nor does it warrant the accuracy or quality of the content contained herein.
A portfolio management change occurred effective May 1, 2007, October 1, 2009, May 13, 2013, September 30, 2013, and November 7, 2019. There were no changes to the investment program or strategy related to this composite.

Fee Schedule

As of 31 August 2023

Dynamic Global Bond (USD Hedged) Composite

The Dynamic Global Bond (USD Hedged) Composite seeks to deliver consistent fixed income returns through a flexible, dynamic and diversified allocation to debt instruments from around the world. The strategy adopts a holistic and rigorous approach to risk management to protect clients on the downside, and particularly seeks to provide adequate diversification at times of equity markets' correction.
(Created January 2015; incepted 31 January 2015)

First 50 million (USD)	32.5 basis points
Next 50 million (USD)	30 basis points
Above 100 million (USD)	30 basis points on all assets[1]
Above 250 million (USD)	25 basis points on all assets[1]
Minimum separate account size	100 million (USD)

[1] A transitional credit is applied to the fee schedule as assets approach or fall below the breakpoint.
