

T. ROWE PRICE FUNDS OEIC

Japanese Equity Fund – Carbon Footprint

As at 31 March 2020

At T. Rowe Price, we recognize that many of our clients wish to understand the carbon footprint of their portfolios and, as such, we provide the following analysis. While carbon footprint analysis can be a useful tool for comparing portfolios, we would caution that a significant portion of the carbon emissions data set is estimated as many companies do not report this figure. Additionally, the statistic of carbon intensity can lack informational relevance in some cases. Carbon intensity is a calculation of carbon emissions divided by revenues, so a low emitting company selling an inexpensive product has a higher carbon footprint than a high emitting company selling an expensive product; and trend movements can be skewed by currency moves affecting revenues.

The following analysis is produced by T. Rowe Price using data provided by Sustainalytics.

The comparator benchmark of the Fund is the TOPIX Index with net dividends reinvested.
