Important Information

Warning: Please note that a positive distribution yield does not imply a positive return. Investors should not make any investment decision solely based on information contained in the table(s) above. Investors should read the relevant offering document of the Fund for further details including the risk factors.

For Class Ax(USD), dividend are paid on a discretionary basis. Dividend may be paid directly out of capital and/or effectively out of the capital of the share class by distributing all gross income prior to the deduction of any fees and expenses attributable to the share class. Payment of dividends directly out of capital and/or effectively out of capital amounts to a return or withdrawal of part of an investor's original investment or from any capital gains attributable to that original investment. Any such distribution may result in an immediate reduction of net asset value per share. This could also erode capital and constrain future growth.

Net distributable income means the net investment income (i.e. dividend income and interest income net of fees and expenses) attributable to the relevant share class and may also include net realised gains (if any). "Net distributable income" that has been accrued as at the end of a financial year and is declared and paid as dividends at the next distribution date immediately after that financial year end could be treated as "net distributable income" for the next financial year. Also, for the purpose of this Dividend Composition Information, "net distributable income" does not include any income equalisation adjustments.

Average payout yield since inception (per annum)

For share classes less than or equal to 1 year, it is calculated on a cumulative basis.

For share classes more than 1 year but less than 5 years, it is the simple average of annualized yield since inception.

For share classes more than 5 years, it is the simple average of annualized yield for the last 5 years.

Average Distribution Since Inception (per annum)

For share classes less than or equal to 1 year, it is calculated on a cumulative basis.

For share classes more than 1 year but less than 5 years, it is the simple average of distribution per share per annum since inception.

For share classes more than 5 years, the average distribution is only disclosed for the last 5 years.

Underlying Portfolio Yield is an annualized percentage measure of interest and dividend income earned by the portfolio, and is shown net of fees and expenses by deducting the latest available total expense ratio. It is based on TRP's best judgment for the securities in the portfolio on the date shown. TRP makes no representation on the accuracy or the methodology used.

3-Year Annualized Volatility is the standard deviation of the monthly returns over the past 3 years.

Important Information
