

# A Broader Approach to Investment-Grade Corporates

We favor areas of less direct exposure to the U.S. credit cycle.

August 2019

## KEY INSIGHTS

- We are applying a broader lens to develop portfolio positioning in our corporate bond strategies for diversification away from the U.S. credit cycle.
- We have established a meaningful allocation to corporate bonds from high-quality international issuers, particularly in Asia.
- The strategies also have allocations to asset-backed securities that are much less exposed to a downturn in U.S. credit than investment-grade corporates.

With the U.S. credit cycle in its later stages and escalating U.S. trade conflicts dampening corporate sentiment and expenditure, we are applying a broader lens to develop portfolio positioning in our corporate bond strategies. We have established a meaningful allocation to corporate bonds from high-quality international issuers, particularly in Asia, for diversification away from the U.S. credit cycle. For similar reasons, the strategies also are allocating to asset-backed securities (ABS) that are much less exposed to a downturn in U.S. credit than investment-grade corporates.

We favor shorter-maturity bonds for the reason that this positioning limits exposure to credit risk if there is a meaningful downturn in the U.S. economy. While we do not currently expect a recession in the next 12 months, we believe that this posture is a prudent hedge against credit downside.

## International Exposure Provides Diversification

Diversification away from U.S. issuers into global issuers is a key part of our positioning. This international allocation can provide valuable exposure to credit cycles that are not as synchronized with the U.S. and may have further room to outperform. The number of non-U.S. companies issuing investment-grade debt in U.S. dollars has grown rapidly in the last few years, expanding the universe of corporates available for our analysts to source attractive relative value ideas.

We have a meaningful allocation to Asian investment-grade corporates, which offer low correlation with the U.S. investment-grade corporate market as well as a strong risk-return profile. This exposure to Asian issuers is both defensive in terms of diversification as well as opportunistic as a potential source of higher risk/adjusted returns. Within the Asia region, we favor

\*Sharpe ratio measures a sector's return above that of the risk-free rate, divided by the standard deviation of excess return.

\*\*Excess return is the return above that of a comparable-maturity U.S. Treasury security.

high-quality issuers in the technology and telecommunications sectors. As with all other segments of the investment-grade corporate bond market, we rely on the fundamental research of T. Rowe Price's global network of credit analysts to select individual credits. We have analysts based in Asia who can conduct in-depth, on-site credit research.

### ABS Add Stability and Incremental Yield

As another source of high-quality diversification, we have an allocation to asset-backed securities across our investment-grade corporate portfolios. ABS are generally high-quality and relatively stable—important defensive characteristics—while also providing some incremental yield over U.S. Treasuries. In addition, because

consumer loans form the collateral for most ABS, they are less exposed to the U.S. credit cycle than investment-grade corporate bonds.

One segment of the ABS market that we currently favor is whole-business securitizations (WBS), which have characteristics of both ABS and corporate bonds. Like corporates, WBS do not amortize principal. The collateral backing WBS is generally a first-priority interest in a company's primary revenue-generating assets—hence the "whole business" name. Quick-service restaurant companies are typical WBS issuers, with the majority of the collateral backing the deals consisting of franchise fees and royalties. The cash flows from this collateral tends to be very stable, boosting the credit

quality of the bonds. We have positions in the highest-conviction WBS ideas from our securitized credit analysts. Exposure to BBB rated WBS can provide incremental yield over their similarly rated corporate counterparts.

### **Economic Acceleration Presents Upside Risk**

We believe that the most meaningful risk to our broadly defensive positioning is an unexpected acceleration in the

U.S. economy. While this scenario seems unlikely given the increasing trade war tensions and the fading effects of the 2018 tax cuts, an abrupt pickup in economic growth could extend the credit cycle and allow riskier, longer-maturity corporates to outperform more conservative credits. We think that superior security selection from our global credit analysis team should help mitigate this risk.

### **WHAT WE'RE WATCHING NEXT**

We are closely monitoring developments in the U.S.-China trade conflict—and the Federal Reserve's reaction to the economic pressure caused by the uncertainty surrounding the situation—to anticipate whether the U.S. economy will avoid a prolonged slowdown. The Fed cited the drag from the trade conflict as a factor in its decision to lower interest rates in July, its first cut since 2008.
