

Gain an Understanding of Private Credit and Elevate Your Investment Strategy

Private credit (or private lending) is a rapidly growing alternative asset class. As borrowers continue to see a decline in more traditional lending options after the great financial crisis, nonbank lenders have stepped in. Investors, facing increased market volatility and greater uncertainty, have also found opportunity in private credit.

Structure

Private credit is a form of borrowing outside the banking system. In traditional or syndicated financings, an intermediary bank arranges and places the loan with a much larger group of lenders.

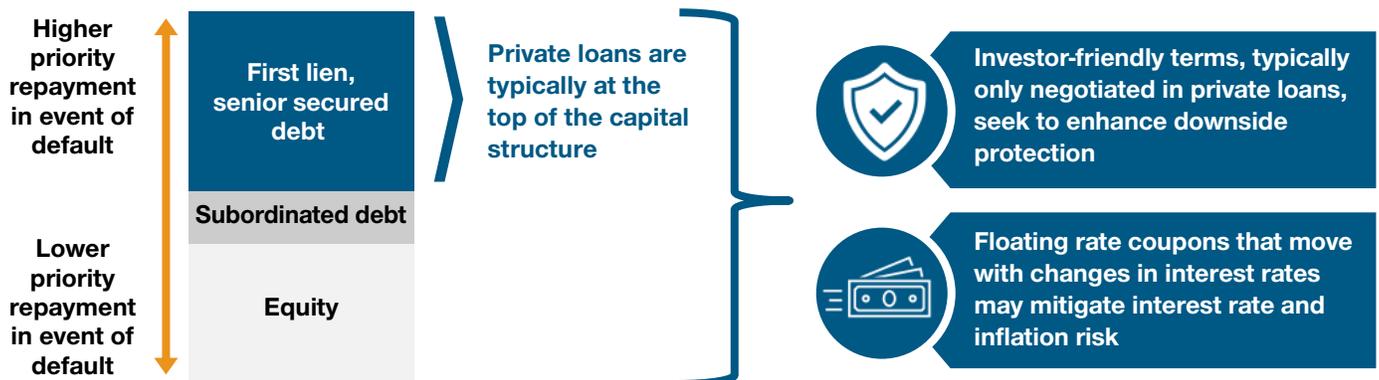

In contrast, private credit typically refers to loans directly originated and negotiated between corporate borrowers and small groups of lenders. The intermediary is not part of the process, which can result in greater flexibility in structure for the borrower and more protection for the investor. As with the traditional borrowing model, most private credit opportunities offer floating interest rates that change as rates change.

Features of private credit

Private loans typically sit at or near the top of a company's capital structure. This placement prioritizes their repayment.

However, since borrowers of nonbank loans may have credit ratings below investment grade, there can also be heightened risks for investors, such as liquidity risk and credit risk.

Accessing private credit opportunities

Investors can access private credit through open-end and closed-end fund structures but should consult with their financial professional to learn more.

Key Risks and Disclosures

This document is for informational purposes only and does not constitute an offer to sell or a solicitation of an offer to buy any securities or partnership interests described herein. Potential investors are urged to consult a financial professional or tax advisor regarding the possible economic, tax, legal, or other consequences of entering into any investments or transactions described herein. Any investor who subscribes, or proposes to subscribe, for an investment in each fund must be able to bear the risks involved and must meet each fund's suitability requirements. Some or all alternative investments may not be suitable for certain investors. No assurance can be given that each fund and account's investment objectives will be achieved. Alternative investments are typically speculative and involve a substantial degree of risk. Each fund and account may be leveraged and engage in other speculative practices that may increase the risk of investment loss. Investors must realize that they could lose all or a substantial amount of their investment in each fund and account. The opinions and commentary provided do not take into account the investment objectives or financial situation of any particular investor or class of investor. Please consider your own circumstances before making an investment decision.

Important Information

This material is provided for informational purposes only and is not intended to be investment advice or a recommendation to take any particular investment action.

Information contained herein is based upon sources we consider to be reliable; we do not, however, guarantee its accuracy.

Past performance is not a reliable indicator of future performance. All investments are subject to market risk, including the possible loss of principal. As interest rates rise, bond prices generally fall. Investments in high yield bonds involve greater risk of price volatility, illiquidity, and default than higher-rated debt securities.
