Category Description: Large Growth

Large-growth portfolios invest primarily in big U.S. companies that are projected to grow faster than other large-cap stocks. Stocks in the top 70% of the capitalization of the U.S. equity market are defined as large cap. Growth is defined based on fast growth (high growth rates for earnings, sales, book value, and cash flow) and high valuations (high price ratios and low dividend yields). Most of these portfolios focus on companies in rapidly expanding industries.

Performance as of 03-31-24

The performance data quoted reflects past performance and is calculated according to Morningstar's methodology. For new share classes of an investment, the performance reflected for periods prior to the inception date of such class may have been calculated using the historical returns of the original share class, and in such cases is displayed in italics. The historical returns of the original share class are adjusted to reflect differences in fees when the newer share class has higher fees than the oldest share class but are not adjusted when the newer class has lower fees. Past performance does not guarantee future results. The investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower than the performance data quoted. For the most recent month end performance information, please call 1-800-922-9945, or visit rps.troweprice.com.
