INVESTMENT OBJECTIVE

The Fund’s investment objective is to provide long-term capital appreciation through growth in the value of its investments whilst at the same time seeking to have a positive effect on the environment and society by investing in companies whose current or future business activities are expected to generate a positive impact under one of the following three impact pillars (“Impact Pillars”): Climate and resources; Social equity and quality of life; and Sustainable innovation and productivity.

MARKET REVIEW

Positive earnings surprises and an ebbing in the latest wave of the coronavirus boosted many developed equity markets in October. Higher energy prices, particularly in Europe, fed inflationary pressures, although most major central banks kept short-term interest rates near zero. Asian stocks underperformed as China’s economy cooled and the global chip shortage weighed on Japanese auto manufacturers.

U.S. equities recorded solid and mostly steady gains. Investor sentiment—along with corporate profits—remained resilient in the face of the supply shortages and the resulting price increases that dominated economic headlines in the month. A large factor in October’s gains appeared to be another quarter of upside earnings surprises, while investors may have also taken some encouragement from signs that inflation, while still at multi-year highs, might at least be plateauing. The flip side of cooling inflation was a slowing economy, but investors appeared confident that growth would pick up again as the latest delta wave of the coronavirus ebbed.

Shares in Europe climbed, as solid corporate earnings helped to counter worries that elevated inflation, supply chain disruptions, and the prospect of tightening monetary policy could hobble an economic recovery. The European Central Bank maintained its existing policies and indicated that it would continue buying assets under the auspices of its Pandemic Emergency Purchase Programme at the somewhat moderated rate announced in September.

Japan’s stock market returns were negative, with sentiment dampened by political uncertainty in the lead up to the October 31 general election, in particular, concerns that new Prime Minister Fumio Kishida would pursue policies perceived as shareholder unfriendly, such as raising the country’s capital gains tax. As it turned out, Kishida’s ruling Liberal Democratic Party (LDP) held onto its majority in the powerful lower house of parliament; despite losing some seats, the outcome for the LDP was better than opinion polls had suggested.

Chinese equities generated a positive return in October, in part due to progress in the beleaguered property sector. China Evergrande, a heavily-indebted leading property developer, made good on several missed payments, avoiding default. On the economic front, China’s gross domestic product rose a less-than-expected 4.9% from a year ago in the third quarter.

FUND REVIEW

The fund outperformed the MSCI All Country World ex-Australia Index Net in October due to favourable stock selection. A top contributor to relative returns was Intuit, a provider of application software that promotes financial inclusion with products oriented toward personal finance solutions and supporting small- and medium-sized enterprises (SMEs). Sentiment on Intuit has been boosted by the company’s acquisition of Mailchimp, a global customer engagement and marketing platform for SMEs. Atlassian also had a strong month. The U.S.-based software company, which provides a task-sharing platform that meaningfully reduces need for teams to meet in person and improves remote collaboration, released a great set of results, with accelerating subscription revenue growth driven by strength in both its Cloud and Datacenter segments. Conversely, our position in WuXi Biologics held back gains. The company provides a range of services and products to the pharmaceutical industry and through its operations helps to bring down the overall cost of bringing new medicines to market. Given WuXi Biologics has a project backlog in COVID-19 vaccines, its share price took a hit on tentative signs that an easier-to-use, oral drug to treat the virus could emerge. HDFC Bank was another laggard. Shares of the India-based financial services provider, which helps extend life insurance protection and drive financial inclusion in emerging markets, were subject to profit taking after surging to a record-high following the release of a good set of results showing improving retail/SME loan growth and stabilising asset quality.

OUTLOOK

Worries about inflation have been stoked by global supply chain constraints, notably bottlenecks in semiconductor supply, in the face of rebounding industrial activity. We believe that these shortages are transient and slowly abating, as suppliers ramp up production to meet demand; we have already seen this in the case of agricultural commodities such as corn and soy. While we are monitoring closely the factors that could exert upward pressure on wages, we anticipate that inflation will continue to hover around current levels. An environment of stable inflation and reasonable valuations would likely lend support to companies with good durability of earnings—the types of companies that our investment process seeks to identify.

The global economy has made vast progress toward post-coronavirus reopening, and we believe these developments have largely been priced in by markets. Progress in containing COVID-19 has been uneven across the global economy, however, with vaccination rates in emerging market countries lagging developed market peers. As this performance gap closes, which we expect it to, there is the potential for emerging market companies to benefit as their economies get closer to a full reopening.

**ADDITIONAL DISCLOSURES**

Unless indicated otherwise the source of all data is T. Rowe Price.

Active Share is a holdings-based measure of active management representing the percentage of a portfolio's holdings that differ from those in its benchmark. Compared with tracking error, which measures the standard deviation of the difference in a manager's returns versus the index returns, Active Share allows investors to get a clearer understanding of what a manager is doing to drive performance, rather than drawing conclusions from observed returns. The greater the difference between the asset composition of a product and its benchmark, the greater the active share is.
