KEY FUND RISKS

ABS and MBS - Asset-Backed Securities (ABS) and Mortgage-Backed Securities (MBS) may be subject to greater liquidity, credit, default and interest rate risk compared to other bonds. They are often exposed to extension and prepayment risk. **Credit** - Credit risk arises when an issuer's financial health deteriorates and/or it fails to fulfill its financial obligations to the fund. **Currency** - Currency exchange rate movements could reduce investment gains or increase investment losses. **Default** - Default risk may occur if the issuers of certain bonds become unable or unwilling to make payments on their bonds. **Derivatives** - derivatives may result in losses that are significantly greater than the cost of the derivative. **Emerging markets** - Emerging markets are less established than developed markets and therefore involve higher risks. **Interest rate** - Interest rate risk is the potential for losses in fixed-income investments as a result of unexpected changes in interest rates. **Liquidity** - Liquidity risk may result in securities becoming hard to value or trade within a desired timeframe at a fair price. **Prepayment and extension** - Mortgage- and asset-backed securities could increase the fund's sensitivity to unexpected changes in interest rates. **Small and mid-cap** - Small and mid-size company stock prices can be more volatile than stock prices of larger companies. **Style** - Style risk may impact performance as different investment styles go in and out of favor depending on market conditions and investor sentiment.
