KEY PRODUCT FEATURES

WHAT ARE YOU INVESTING IN?

- You are investing in a sub-fund of T. Rowe Price Funds SICAV, an open-ended investment company incorporated in Luxembourg which qualifies as a UCITS under the 2010 Law.
- Objective: To maximise the value of its shares through both growth in the value of, and income from, its investments.
- With distributing shares, any dividends will be declared at least annually. When a dividend is declared, the NAV of the relevant class is reduced by the amount of the dividend. Share classes with an ‘x’ suffix may distribute income, capital gains and capital. Any charges or dividend distributions paid from capital can result in capital erosion and constrain capital growth.

Refer to paragraphs 1 and 3 of the Singapore Prospectus for further information on features of the product.

Investment Strategy

- The fund is actively managed and invests mainly in a diversified portfolio of corporate bonds from emerging market issuers.
- Although the fund does not have sustainable investment as an objective, the promotion of environmental and social characteristics is achieved through the fund’s commitment to maintain at least 10% of the value of its portfolio invested in Sustainable Investments. The investment manager implements the following investment strategies: exclusion screen, sustainable investment exposure and active ownership.

Refer to paragraph 3 of the Singapore Prospectus for further information on the investment strategy of the product.

KEY RISKS	
WHAT ARE THE KEY RISKS OF THIS INVESTMENT? The value of the product and its dividends may rise or fall. These risk factors may cause you to lose some or all of your investment. You should be aware that the fund may be exposed to other risks not named here, and the risk descriptions are not exhaustive.	Refer to paragraphs 3 and 5 of the Singapore Prospectus for further information on risks of the product.
Market and Credit Risks	
<ul style="list-style-type: none"> • You are exposed to China Interbank Bond Market risk. The China Interbank Bond Market may subject the fund to additional liquidity, volatility, regulatory, settlement procedure and counterparty risks. The fund may incur significant trading and realisation costs. • You are exposed to credit risk. A bond or money market security could lose value if the issuer's financial health deteriorates. • You are exposed to default risk. Default risk may occur if the issuers of certain bonds become unable or unwilling to make payments on their bonds. • You are exposed to emerging markets risk. Emerging markets are less established than developed markets and therefore involve higher risks. • You are exposed to geographic concentration risk. To the extent that the fund invests a large portion of its assets in a particular geographic 	

<p>area, its performance will be more strongly affected by any social, political, economic, environmental or market conditions within that area. This can mean higher volatility and risk of loss as compared to a fund that invests more broadly.</p> <ul style="list-style-type: none"> • You are exposed to interest rate risk. When interest rates rise, bond values generally fall. This risk is generally greater the longer the maturity of a bond investment and the higher its credit quality. • You are exposed to market risk. Prices of many securities change daily and can fall based on a wide variety of factors. 															
Liquidity Risks															
<p>The fund is not listed and you can redeem only on Singapore business days which are also Luxembourg business days.</p> <ul style="list-style-type: none"> • Redemptions could be subject to delays and other redemption policies set by the fund. • Any security could become hard to value or to sell at a desired time and price. 															
Product-Specific Risks															
<ul style="list-style-type: none"> • You are exposed to contingent convertible bond ("CoCos") risk. Investments in CoCos can be subject to higher interest rate risk, capital structure inversion risk, trigger level risk, coupon cancellation risk, call extension risk, unknown risk, yield/valuation risk, conversion risk, write down risk, industry concentration risk and liquidity risk. • You are exposed to derivatives risk. Certain derivatives could behave unexpectedly or could expose the fund to losses that are significantly greater than the cost of the derivative, in other words, they provide leverage. • You are exposed to high yield bond risk. A bond or debt security rated 'below investment grade', is generally subject to higher yields but to greater risks too. The higher yield is offered to compensate for the reduced creditworthiness and the increased risk of default of the issuer to meet its payments obligations of income and principal. High yield bonds are usually more sensitive to market conditions and fluctuations. Their market is typically thinner and less active, creating a higher liquidity risk than for higher-rated bonds. This implies they may become hard to value or to sell at a desired price and/or time.
