Performance data quoted represents past performance and is not a reliable indicator of future performance. Investment return and principal value will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than the performance data quoted. To obtain the most recent month-end performance, visit troweprice.com. Consider the investment objectives, risks, and charges and expenses carefully before investing. For a prospectus or, if available, a summary prospectus containing this and other information, call 1-800-638-7780 or visit troweprice.com. Read it carefully. The Fund's total return figures reflect the reinvestment of dividends and capital gains, if any.

Prior to 1 March 2019, the name of the International Disciplined Equity Fund was the International Concentrated Equity Fund.

Share prices are subject to market risk, including loss of the money you invest. In addition, there are risks associated with unfavorable currency exchange rates and political or economic uncertainty abroad. The fund is nondiversified, which means it can invest a larger percentage of its assets in the securities of a smaller number of issuers than a diversified fund.

The fund(s) may have other share classes available that offer different investment minimums and fees. See the prospectus for details. For Sourcing Information, please see Additional Disclosures.

MARKET COMMENTARY

International stocks fell in September as surging coronavirus cases in many countries raised fears of more lockdowns that would weigh on economic activity. The U.S. dollar rose against the euro and British pound but weakened slightly against the Japanese yen. Developed European stocks retreated as a second wave of infections in Spain, France, the UK and other countries threatened to snuff out the region's nascent recovery. Virtually every developed European market recorded losses except for Denmark, where stocks rose slightly. Banks, insurers, and travel-related stocks were among the biggest sectoral losers. European Central Bank (ECB) President Christine Lagarde said that the euro economy was recovering strongly from the coronavirus-driven contraction and cited a rebound in manufacturing and services, though recent data suggested that consumer and business confidence were starting to fade. The ECB forecast the euro economy would contract 8% in 2020, a slight improvement over its outlook three months prior, and kept its pandemic bond-buying program unchanged at 1.35 trillion euros. UK stocks fell. Britain's economy expanded 6.6% in July in its third month of growth, raising the likelihood that the UK could exit its coronavirus-driven recession in the third quarter. However, a possible surge in unemployment after the government ends its furlough program and the risk of a no-deal Brexit weighed on the country's outlook. Developed Asian stocks fell, led by Australia and New Zealand. Japanese stocks edged higher, making the country among the few advancers. The Bank of Japan (BOJ) left its key interest rate and asset purchases on hold and raised its assessment of the economy for the first time since the coronavirus hit. The BOJ governor said that the central bank would maintain a close relationship with the new government led by Prime Minister Yoshihide Suga, who took office September 16, signaling little change in monetary policy in the near term. Emerging markets stocks declined. Chinese stocks weakened as Sino-U.S. tensions outweighed economic data showing a strong recovery. Brazilian stocks sagged as the country continues to grapple with one of the world's worst coronavirus outbreaks. Brazil's economy plunged 11.4% in the second quarter from a year ago, its largest slump on record. All 11 sectors in the MSCI EAFE Index retreated. The energy sector fell the most, while health care declined the least.

RISK RETURN CHARACTERISTICS

Past performance is not a reliable indicator of future performance. Numbers may not total due to rounding; all other numbers are percentages. Analysis represents the total performance of the portfolio as calculated by the FactSet attribution model and is inclusive of other assets that will not receive a classification assignment in the detailed structure shown. Returns will not match official T. Rowe Price performance because FactSet uses different exchange rate sources and does not capture intra-day trading. Performance for each security is obtained in the local currency and, if necessary, is converted using an exchange rate determined by an independent third party. Figures are shown with gross dividends reinvested. Sources: Financial data and analytics provider FactSet. Copyright 2020 FactSet. All Rights Reserved. MSCI/S&P GICS Sectors; Analysis by T. Rowe Price Associates, Inc. T. Rowe Price uses the current MSCI/S&P Global Industry Classification Standard (GICS) for sector and industry reporting. T. Rowe Price will adhere to all updates to GICS for prospective reporting. Figures are shown gross of fees. Returns would be lower as a result of the deduction of such fees. Performance returns are in USD. For Sourcing Information, please see Additional Disclosures.

Definitions

Active Share is a holdings based measure of active management representing the percentage of a portfolio's holdings that differ from those in its benchmark. Compared to tracking error, which measures the standard deviation of the difference in a manager's returns versus the Benchmark returns, Active Share allows investors to get a clearer understanding of what a manager is doing to drive performance, rather than drawing conclusions from observed returns. The greater the difference between the asset composition of a product and its benchmark, the greater the active share is.

Additional Disclosures

Source for MSCI data: MSCI. MSCI and its affiliates and third party sources and providers (collectively, "MSCI") makes no express or implied warranties or representations and shall have no liability whatsoever with respect to any MSCI data contained herein.
