Performance data quoted represents past performance and is not a reliable indicator of future performance. Investment return and principal value will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than the performance data quoted. To obtain the most recent month-end performance, visit [troweprice.com](https://www.troweprice.com). The Fund's total return figures reflect the reinvestment of dividends and capital gains, if any.

Prior to 5 April 2023, the name of the Integrated U.S. Small-Mid Cap Core Equity Fund was the QM U.S. Small & Mid-Cap Core Equity Fund.

The fund is subject to the risks of stock investing, including possible loss of principal. The fund's strategy relies heavily on quantitative models to analyze data and construct investment portfolios. Relying on these models entails the risk that the models themselves may be limited or incorrect, that the data the models rely on may be incorrect or incomplete, and that the adviser may not be successful in selecting companies for investment or determining the weighting of particular stocks.

The fund(s) may have other share classes available that offer different investment minimums and fees. See the prospectus for details.

Past performance is not a reliable indicator of future performance. Figures are calculated using monthly data and are net of fees.**SECTOR ATTRIBUTION DATA VS. RUSSELL 2500 INDEX**

(12 months ended March 31, 2024)

Past performance is not a reliable indicator of future performance. All numbers are percentages. Analysis represents the total performance of the portfolio as calculated by the FactSet attribution model and is inclusive of other assets. Non-equity positions are excluded from structure shown. Returns will not match official T. Rowe Price performance because FactSet uses different exchange rate sources and does not capture intra-day trading. Performance for each security is obtained in the local currency and, if necessary, is converted to USD using an exchange rate determined by an independent third party. Figures are shown with gross dividends reinvested. Sources: Financial data and analytics provider FactSet. Copyright 2024 FactSet. All Rights Reserved. MSCI/S&P GICS Sectors; Analysis by T. Rowe Price. T. Rowe Price uses the current MSCI/S&P Global Industry Classification Standard (GICS) for sector and industry reporting. Figures are shown gross of fees. Returns would be lower as a result of the deduction of such fees. Performance returns are in USD.

Definitions

Active Share is a holdings based measure of active management representing the percentage of a portfolio's holdings that differ from those in its benchmark. Compared to tracking error, which measures the standard deviation of the difference in a manager's returns versus the Benchmark returns, Active Share allows investors to get a clearer understanding of what a manager is doing to drive performance, rather than drawing conclusions from observed returns. The greater the difference between the asset composition of a product and its benchmark, the greater the active share is.
