## Market Commentary

Major U.S. stock indexes were narrowly mixed in December. As measured by various Russell indexes, large-cap stocks performed best, followed by mid- and small-caps. Value outperformed growth across all market capitalizations. Within the S&P 500 Index, sector performance was mixed. Utilities performed worst, while real estate, consumer staples, health care, and communication services shares also underperformed. On the other hand, financials, materials, and industrials and business services stocks performed best.

Equities were initially buoyed by expectations for a December interest rate cut due to signs of a weakening labor market. Indeed, the Federal Reserve, which reduced rates in September and October despite continued elevated inflation, lowered rates again on December 10. There were hints of sector rotation during the month, as investors seemed to favor cyclical sectors that have previously underperformed but could benefit from lower interest rates and fiscal stimulus legislation passed during the summer. On the other hand, concerns about heightened valuations and enormous capital expenditures among artificial intelligence (AI)-related stocks periodically weighed on some high-growth segments.

While the transformative impact of AI continues to be a defining force, the contours of equity market leadership are shifting. In 2026, we anticipate broader market participation and a widening spectrum of opportunities—both within AI related sectors and across a diverse range of industries and regions. Overall, the market backdrop is complex, but the coming year is likely to bring broader participation. The AI cycle remains powerful, yet it is evolving; fiscal expansion, reindustrialization, and valuation gaps are opening multiple paths to growth. We believe investors should balance exposure to enduring AI leaders with cyclical and international markets that stand to benefit from this broadening.

The Fund's total return figures reflect the reinvestment of dividends and capital gains, if any.

The fund(s) may have other share classes available that offer different investment minimums and fees. See the prospectus for details.

**Risks: Small- and mid-cap stocks:** Investments in securities issued by small and mid-cap companies are likely to be more volatile than investments in securities issued by larger companies. **Quantitative models:** The fund's reliance on quantitative models and the analysis of specific metrics in constructing the fund's portfolio could cause the adviser to be unsuccessful in selecting companies for investment or determining the weighting of particular stocks in the portfolio. See the prospectus for more detail on the fund's principal risks.
