*The I Class operates under a contractual operating expense limitation that expires on February 28, 2026.

PERFORMANCE

(NAV, total return)

	One Month	Three Months	One Year	Annualized			
				Three Years	Five Years	Ten Years	Fifteen Years
Africa & Middle East Fund - I Class	1.31%	1.60%	12.56%	7.71%	6.56%	3.72%	8.35%
MSCI Arabian Markets & Africa 10/40 Investable Market Index Net	-0.16	0.22	7.79	4.08	5.12	2.34	—
Linked Performance Benchmark*	-0.16	0.22	7.79	4.08	5.12	2.50	7.25

Performance data quoted represents past performance and is not a reliable indicator of future performance. Investment return and principal value will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than the performance data quoted. To obtain the most recent month-end performance, visit [troweprice.com](https://www.troweprice.com). The Fund's total return figures reflect the reinvestment of dividends and capital gains, if any.

The T. Rowe Price Fund shares the portfolio of an existing fund (the original share class of the fund referred to as the "investor class"). The total return figures for the I Class shares have been calculated using the performance data of the investor class up to the inception date of the I Class (3/6/17) and the actual performance results of the I Class since that date. Because the I Classes are expected to have lower expenses than the Investor Classes, the I Class performance, had it existed over the periods shown, would have been higher.

*Effective July 1, 2018, the "net" version of the benchmark replaced the "gross" version of the benchmark. The "net" version of the benchmark assumes the reinvestment of dividends after the deduction of withholding taxes. Historical benchmark representations have been restated to show net of withholding taxes. Effective January 1, 2018, the benchmark was changed to the MSCI Arabian Markets & Africa 10/40 Investable Market Index Net. Prior to January 1, 2018, the benchmark was S&P Emerging Market/Frontier Middle East & Africa Broad Market Index ex Israel Net. Prior to September 30, 2010, the benchmark was MSCI Arabian Markets and Africa Index Net. Prior to July 1, 2009, the benchmark was S&P IFCG Africa and Middle East ex-Saudi Arabia and ex-Israel Net. Prior to September 1, 2008, this benchmark also excluded Kuwait. Historical benchmark representations have not been restated.

Share prices are subject to market risk, including loss of the money you invest. In addition, there are risks associated with unfavorable currency exchange rates and political or economic uncertainty abroad.

The fund(s) may have other share classes available that offer different investment minimums and fees. See the prospectus for details.

MARKET COMMENTARY

Equities in Africa and the Middle East were broadly flat in March in U.S. dollar terms, underperforming both their developed and emerging market peers. At a global level, sentiment was boosted by indications that the U.S. Federal Reserve may cut rates as many as three times over the rest of 2024, while growing expectations of monetary loosening by the European Central Bank also helped drive stock markets higher. In China, some better-than-anticipated macroeconomic data and easing deflation expectations were offset by concern for the country's ongoing property downturn.

South Africa posted gains in March, following a weak start to 2024. The rally was led by gold and platinum group metal (PGM) names. Returns for U.S. dollar-based investors were also enhanced by the strengthening of the rand over the month. On the political front, recently released poll results suggested that the new MK Party, led by former President Jacob Zuma, is taking support away from the governing African National Congress. The national election is scheduled for May 29.

The oil price rose on escalating tensions in the Middle East and between Russia and Ukraine, combined with expectations that the Organization of the Petroleum Exporting Countries (OPEC+) will maintain production cuts. Markets were mixed within the Gulf Cooperation Council over the month. The United Arab Emirates rose modestly in U.S. dollar terms, with investors encouraged by the boost to the country's economy provided by tourism and real estate. Against this backdrop, stocks exposed to these sectors were particularly strong. In Bahrain, the market delivered strong gains on the back of major acquisition news in the financial services sector. The unexpected sharp hike in interest rates to 27.25% and subsequent currency devaluation in Egypt, led the country's stock market to plummet in March.

RISK RETURN CHARACTERISTICS

(Five Years ended March 31, 2024)

	Active Share* (as of 3/31/24)	Annualized Std. Deviation	Alpha	Beta	R-Squared	Information Ratio	Sharpe Ratio	Tracking Error

(12 months ended March 31, 2024)

**SECTOR ATTRIBUTION DATA VS. LINKED PERFORMANCE BENCHMARK***

(12 months ended March 31, 2024)

Past performance is not a reliable indicator of future performance. All numbers are percentages. Analysis represents the total performance of the portfolio as calculated by the FactSet attribution model and is inclusive of other assets. Non-equity positions are excluded from structure shown. Returns will not match official T. Rowe Price performance because FactSet uses different exchange rate sources and does not capture intra-day trading. Performance for each security is obtained in the local currency and, if necessary, is converted to USD using an exchange rate determined by an independent third party. Figures are shown with gross dividends reinvested. Sources: Financial data and analytics provider FactSet. Copyright 2024 FactSet. All Rights Reserved. MSCI/S&P GICS Sectors; Analysis by T. Rowe Price. T. Rowe Price uses the current MSCI/S&P Global Industry Classification Standard (GICS) for sector and industry reporting. Figures are shown gross of fees. Returns would be lower as a result of the deduction of such fees. Performance returns are in USD.

Definitions

Active Share is a holdings based measure of active management representing the percentage of a portfolio's holdings that differ from those in its benchmark. Compared to tracking error, which measures the standard deviation of the difference in a manager's returns versus the Benchmark returns, Active Share allows investors to get a clearer understanding of what a manager is doing to drive performance, rather than drawing conclusions from observed returns. The greater the difference between the asset composition of a product and its benchmark, the greater the active share is.

Additional Disclosures

Consider the investment objectives, risks, and charges and expenses carefully before investing. For a prospectus or, if available, a summary prospectus containing this and other information, call 1-800-638-7780 or visit [troweprice.com](https://www.troweprice.com). Read it carefully.
