Benchmark	MSCI ACWI Net
Expense Information (as of the most recent Prospectus)	0.67%
Fiscal Year End	October 31
12B-1 Fee	—

MARKET COMMENTARY

Global equities delivered solid gains in March as central banks' continued signaling for potential interest rate cuts in 2024 and exuberance toward artificial intelligence (AI)-driven demand helped buoy stocks. U.S. stocks rose in March, capping a strong quarter for equities. Investors remained optimistic about the corporate profit potential stemming from advances in AI and were also encouraged by the outcome of the Federal Reserve's mid-March monetary policy meeting. Although the central bank kept short-term interest rates steady, policymakers maintained their year-end 2023 "dot plot" projections for three quarter-point interest rate cuts by the end of 2024. Developed European stocks also rose. The European Central Bank (ECB) left its key deposit rate unchanged at a record 4.0% but hinted that it could start reducing it in June. The central bank revised its inflation and economic growth forecasts lower and indicated that discussion on dialing back restrictive policy later in the year had begun. Headline and core inflation, which excludes volatile food and energy prices, continued to slow in February, although by less than expected. Developed Asian markets produced solid returns. Japanese stocks continued to make gains in March, largely due to yen weakness. The Bank of Japan (BoJ) made a much-anticipated policy shift and exited its negative interest rate policy. The BoJ also ended its yield curve control program. Emerging market stocks broadly gained ground over the period. Emerging Asian markets were among the best performers as Chinese markets stabilized, though A shares were modestly negative, and strong gains in South Korea and Taiwan helped lift returns for the region. Latin American markets were also broadly positive with the exception of Brazil, which lost ground. Emerging European shares were more mixed and underperformed other regions.

Sector performance in the MSCI All Country World Index was positive. Energy, materials, and utilities were the strongest performers, while consumer discretionary and consumer staples lagged the most but still produced positive returns.

PERFORMANCE

(NAV, total return)

	One Month	Three Months	One Year	Annualized			
				Three Years	Five Years	Ten Years	Fifteen Years
Global Stock Fund - I Class	3.24%	11.89%	29.79%	2.74%	14.26%	13.27%	15.08%
MSCI All Country World Index Net	3.14	8.20	23.22	6.96	10.92	8.66	11.63

Performance data quoted represents past performance and is not a reliable indicator of future performance. Investment return and principal value will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than the performance data quoted. To obtain the most recent month-end performance, visit [troweprice.com](https://www.troweprice.com). The Fund's total return figures reflect the reinvestment of dividends and capital gains, if any.

The T. Rowe Price Fund shares the portfolio of an existing fund (the original share class of the fund referred to as the "investor class"). The total return figures for the I Class shares have been calculated using the performance data of the investor class up to the inception date of the I Class (3/6/17) and the actual performance results of the I Class since that date. Because the I Classes are expected to have lower expenses than the Investor Classes, the I Class performance, had it existed over the periods shown, would have been higher.

Share prices are subject to market risk, including loss of the money you invest. In addition, there are risks associated with unfavorable currency exchange rates and political or economic uncertainty abroad.

The fund(s) may have other share classes available that offer different investment minimums and fees. See the prospectus for details.

Past performance is not a reliable indicator of future performance. All numbers are percentages. Analysis represents the total performance of the portfolio as calculated by the FactSet attribution model and is inclusive of other assets. Non-equity positions are excluded from structure shown. Returns will not match official T. Rowe Price performance because FactSet uses different exchange rate sources and does not capture intra-day trading. Performance for each security is obtained in the local currency and, if necessary, is converted to USD using an exchange rate determined by an independent third party. Figures are shown with gross dividends reinvested. Sources: Financial data and analytics provider FactSet. Copyright 2024 FactSet. All Rights Reserved. MSCI/S&P GICS Sectors; Analysis by T. Rowe Price. T. Rowe Price uses the current MSCI/S&P Global Industry Classification Standard (GICS) for sector and industry reporting. Figures are shown gross of fees. Returns would be lower as a result of the deduction of such fees. Performance returns are in USD.

Definitions

Active Share is a holdings based measure of active management representing the percentage of a portfolio's holdings that differ from those in its benchmark. Compared to tracking error, which measures the standard deviation of the difference in a manager's returns versus the Benchmark returns, Active Share allows investors to get a clearer understanding of what a manager is doing to drive performance, rather than drawing conclusions from observed returns. The greater the difference between the asset composition of a product and its benchmark, the greater the active share is.
