## MARKET COMMENTARY

Global equity and fixed income markets were mixed in March. Equity markets were driven by investors' optimism about the corporate profit potential stemming from advances in artificial intelligence. Treasury interest rates retraced some of their late-2023 decline due to some higher-than-expected inflation readings. U.S. Treasury bill yields increased, even though the fed funds target rate remained in the 5.25% to 5.50% range.

We remain overweight equities, supported by firming growth and moderating inflation, positive earnings trends, and reasonable valuations outside of large-cap growth. Bond yields remain attractive but could be volatile as central bank expectations continue to shift alongside the growth and inflation backdrop. Credit fundamentals remain supportive; however, spreads remain tight.

Despite the prominence of macroeconomic factors in driving the sustained rally in stocks and the recent downturn in bonds, we believe that earnings expectations and corporate fundamentals will be a more significant driver of near-term market performance. We also think volatility may increase with the coming U.S. presidential election, and a resilient labor market along with wage growth, which could cause the Fed to keep rates high if it significantly increases, could pose economic headwinds as financial conditions tighten. Against this backdrop, we are mindful of maintaining liquidity given both attractive higher-quality, short-term yields, and for the potential to add to risk assets should volatility create attractive opportunities.

Key risks to global markets include the impacts of geopolitical tensions, the central banks' policy divergence, a retrenchment in growth, a resurgence in inflation, and the trajectory of Chinese growth and policy. While we increased allocations to risk assets during the recent period given the potential upward inflection in earnings, we continue to evaluate long-term valuations along with the durability of current economic growth as we assess compelling opportunities and potential risks through the remainder of the year.
