

PORTFOLIO UPDATE

Retirement Funds - Advisor Class

As of September 30, 2021

Portfolio Manager:	Managed Fund Since:	Joined Firm:
Wyatt Lee	2015	1999
Kim DeDominicis	2019	2000
Andrew Jacobs van Merlen	2020	2000

MARKET COMMENTARY

Global equity and fixed income markets declined over the month as inflation and interest rate fears weighed on markets.

We remain modestly underweight to stocks relative to bonds and cash. The recent upswing in economic growth may have already peaked, although we believe it is likely to remain above potential even as tailwinds from fiscal and monetary stimulus fade. In our view, equity valuations appear extended, and their risk/reward profile appears less compelling after the significant rebound from the sell-off in early 2020. Despite recent moves higher in yields from summer lows, bonds remain susceptible to further increases in rates on the back of strong growth and elevated inflation expectations. We are overweight cash, which shortens our duration and provides liquidity.

INVESTMENT OBJECTIVE

The funds seek the highest total return over time consistent with an emphasis on both capital growth and income.

While the positive economic outlook is likely to be supportive of risk assets, in our view, these tailwinds are reflected in current valuations and leave markets vulnerable to negative shocks. Moreover, growth equities may face pressure from rising, longer-term interest rates. The economic environment should also provide a beneficial backdrop for high yield credit as default expectations remain low, but potential returns are limited by relatively tighter credit spreads.

SERIES INFORMATION

Inception Date of Series	September 30, 2002
Expense Information (Series range)	0.74 – 0.89
Fiscal Year End	May 31

We have a balanced view on risk taking within our portfolios as equity valuations appear extended amid continued volatility and political risks. We believe that our strategic investing approach and broad diversification add value over the long term and could help to mitigate downside risk.

GLIDE PATH

IMPORTANT CHANGES TO THE TARGET DATE FUND: T. Rowe Price is making changes to the glide path of our target date Fund. The glide path will be transitioning to the allocations shown above. Specifically, beginning in the second quarter of 2020, the glide path will gradually change to increase its overall equity allocation at certain points and accordingly decrease its bond allocation. Note that there will be no change to the allocation at the target retirement date. For example, the equity allocation at the beginning of the enhanced glide path will be increasing from the original 90% allocation and will be increasing from the original 20% allocation at the end of the glide path. Adjustments to equity and bond allocations will be made incrementally, and we expect the transition to the enhanced glide path to be completed in the second quarter of 2022, depending on market conditions. The 2065 vintage follows the enhanced glide path and does not have a transition period. Please see the prospectus for additional details.

Performance data quoted represents past performance and is not a reliable indicator of future performance. Investment return and principal value will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than the performance data quoted. To obtain the most recent month-end performance, visit troweprice.com. Consider the investment objectives, risks, and charges and expenses carefully before investing. For a prospectus or, if available, a summary prospectus containing this and other information, call 1-800-638-7780 or visit troweprice.com. Read it carefully. The Fund's total return figures reflect the reinvestment of dividends and capital gains, if any.

**The T. Rowe Price Retirement Funds-Advisor Class share the portfolio of an existing fund (the original share class of the fund is referred to as the "investor class"). The total return figures for this Advisor Class have been calculated using the performance data of the investor class up to the inception date of the Advisor Class and the actual performance results of the Advisor Class since that date. The inception dates for the T. Rowe Price Retirement Funds-Advisor Class are as follows: October 31, 2003, for the Retirement 2010, 2020, 2030, 2040, and Income Funds; May 31, 2007, for the Retirement 2005, 2015, 2025, 2035, 2045, and 2055 Funds. (The inception dates shown for the Advisor Classes in the table above are the dates on which the investor class started operations except for the Retirement 2050 Fund - Advisor Class, which inceptioned on the same day as its investor class.) The performance results of the investor class have not been adjusted to reflect the 12b-1 fee associated with the Advisor Class (0.25%). Had this fee been included, the performance would have been lower.

The principal value of the Retirement Funds is not guaranteed at any time, including at or after the target date, which is the approximate year an investor plans to retire (assumed to be age 65) and likely stop making new investments in the fund. If an investor plans to retire significantly earlier or later than age 65, the funds may not be an appropriate investment even if the investor is retiring on or near the target date. The funds' allocations among a broad range of underlying T. Rowe Price stocks, bonds, and derivatives will (with the exception of the Retirement Balanced Fund) change over time. The funds (other than the Retirement Balanced Fund) emphasize potential capital appreciation during the early phases of retirement asset accumulation, balance the need for appreciation with the need for income as retirement approaches, and focus on supporting an income stream over a long-term postretirement withdrawal horizon. The funds are not designed for a lump-sum redemption at the target date and do not guarantee a particular level of income. The funds maintain a substantial allocation to equities both prior to and after the target date, which can result in greater volatility over shorter time horizons. Derivatives may be riskier or more volatile than other types of investments because they are generally more sensitive to changes in market or economic conditions.

All investments are subject to risk, including the possible loss of the money you invest.

The fund(s) may have other share classes available that offer different investment minimums and fees. See the prospectus for details. For Sourcing Information, please see Additional Disclosures.

The stated expense ratio includes the applicable 12b-1 fee. The expense ratios shown are as of the fund's most recent prospectus.

The Combined Index Portfolio is composed of the Russell 3000 Index, MSCI AC World ex U.S. Index Net, Bloomberg U.S. Aggregate Index, and Bloomberg 1-5 Year TIPS Index. Each index is weighted at the appropriate strategic neutral allocation of its respective asset class, which is predetermined and changes over time.

Historical benchmark representations were not restated to reflect the component benchmark changes.

[^]Since Inception returns are not annualized.

MANAGEMENT

The Retirement Funds are managed by Wyatt Lee, Kim DeDominicis and Andrew Jacobs van Merlen. The portfolio managers are responsible for the strategic design and day-to-day management of the Fund. This includes portfolio design, positioning, performance, and risk-management oversight. The Fund's tactical asset allocation decisions are made by the firm's Asset Allocation Committee. The Committee is co-chaired by Rob Sharps and Charles Shriver, and includes some of the firm's most senior investment management professionals across major asset classes. Wyatt is a member of the firm's Asset Allocation Committee. Individual security selection is made by portfolio managers of the Fund's component strategies drawing on the fundamental insights of T. Rowe Price's team of around 200 global research analysts.

Definitions

Weighted Average Effective Duration is a calculation that seeks to measure the price sensitivity of a bond Fund to changes in interest rates. In general, the longer the average duration, the greater the Fund's sensitivity to interest rates.
