**Performance data quoted represents past performance and is not a reliable indicator of future performance. Investment return and principal value will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than the performance data quoted. To obtain the most recent month-end performance, visit [troweprice.com](http://troweprice.com). Consider the investment objectives, risks, and charges and expenses carefully before investing. For a prospectus or, if available, a summary prospectus containing this and other information, call 1-800-638-7780 or visit [troweprice.com](http://troweprice.com). Read it carefully.** The Fund's total return figures reflect the reinvestment of dividends and capital gains, if any.

**Investors should note that the Fund's short-term performance is highly unusual and unlikely to be sustained.**

The value approach carries the risk that the market will not recognize a security's intrinsic value for a long time, or that a stock judged to be undervalued may actually be appropriately priced.

The fund(s) may have other share classes available that offer different investment minimums and fees. See the prospectus for details. For Sourcing Information, please see Additional Disclosures.

**MARKET COMMENTARY**

U.S. equities declined in September, in one of the market's weakest months since the beginning of the coronavirus pandemic. As measured by various Russell indexes, small-cap shares outperformed large- and mid-caps. Russell indexes also indicated that value stocks outperformed growth across all market capitalizations. Within the S&P 500 Index, most stocks declined, with materials, communication services, and real estate posting the largest losses. Conversely, energy, the only sector to advance, produced strong gains.

During the month, investors were cautious given the uncertainty about whether the USD 1 trillion bipartisan infrastructure spending legislation passed by the U.S. Senate would also be passed by the House of Representatives. Investors were also concerned that Congress has yet to pass legislation that raises or eliminates the debt ceiling, which Treasury Secretary Janet Yellen believes will be reached around October 18. Without action from Congress, the government could default on some of its debts. In addition, the market struggled to advance as intermediate- and long-term Treasury rates climbed in response to the Federal Reserve's determination that, if the economy continues improving, "a moderation in the pace of asset purchases may soon be warranted."

The past few months have brought several negative surprises, including the rapid spread of the delta variant of the coronavirus and the regulatory crackdown in China. Nevertheless, the delta variant seems likely to have only delayed rather than derailed the global recovery. There are some challenges on the horizon, including the withdrawal of extraordinary monetary accommodation in the U.S. and other developed markets. How today's elevated bond and equity valuations will respond to the normalization of monetary policy is an open question, but past tightening episodes have not always sparked market corrections. A carefully communicated and slow rise in interest rates in the coming years may allow the bull market to continue.

## Definitions

Active Share is a holdings based measure of active management representing the percentage of a portfolio's holdings that differ from those in its benchmark. Compared to tracking error, which measures the standard deviation of the difference in a manager's returns versus the Benchmark returns, Active Share allows investors to get a clearer understanding of what a manager is doing to drive performance, rather than drawing conclusions from observed returns. The greater the difference between the asset composition of a product and its benchmark, the greater the active share is.
