

T. Rowe Price Multi-Strategy Total Return Fund

Supplement to Prospectus and Summary Prospectus Dated March 1, 2021

In the summary prospectus and Section 1 of the prospectus, the disclosure under “Management” is supplemented as follows:

T. Rowe Price International Ltd (T. Rowe Price International) is added as an investment subadviser to the fund.

In Section 2 of the prospectus, the disclosure under “Investment Adviser(s)” is supplemented as follows:

T. Rowe Price has entered into a subadvisory agreement with T. Rowe Price International under which T. Rowe Price International is authorized to trade securities and make discretionary investment decisions on behalf of the fund. T. Rowe Price International is registered with the SEC as an investment adviser and is authorized or licensed by the United Kingdom Financial Conduct Authority and other global regulators. T. Rowe Price International sponsors and serves as adviser to foreign collective investment schemes and provides investment management services to registered investment companies and other institutional investors. T. Rowe Price International is headquartered in London and has several branch offices around the world. T. Rowe Price International is a direct subsidiary of T. Rowe Price and its address is 60 Queen Victoria Street, London EC4N 4TZ, United Kingdom.

The date of this supplement is August 2, 2021.

Investment Objective(s)

The fund seeks strong long-term risk adjusted returns.

Fees and Expenses

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the fund. You may also incur brokerage commissions and other charges when buying or selling shares of the Investor Class or I Class, which are not reflected in the table.

Fees and Expenses of the Fund

	Investor Class	I Class	Advisor Class
Shareholder fees (fees paid directly from your investment)			
Maximum account fee	\$20 ^a	—	—
Annual fund operating expenses (expenses that you pay each year as a percentage of the value of your investment)			
Management fees	1.00%	1.00%	1.00%
Distribution and service (12b-1) fees	—	—	0.25
Other expenses	0.56	0.50 ^e	0.92
Acquired fund fees and expenses	0.24	0.24	0.24
Total annual fund operating expenses	1.80 ^b	1.74 ^b	2.41 ^b
Fee waiver/expense reimbursement	(0.51) ^{c,d}	(0.60) ^{c,e}	(0.71) ^{c,f}
Total annual fund operating expenses after fee waiver/expense reimbursement	1.29^{b,d}	1.14^{b,e}	1.70^{b,f}

^a Subject to certain exceptions, accounts with a balance of less than \$10,000 are charged an annual \$20 fee.

^b The figures shown in the fee table do not match the "Ratios to average net assets" shown in the Financial Highlights table, as those figures do not include acquired fund fees and expenses and exclude expenses permanently waived as a result of investments in other T. Rowe Price Funds.

^c T. Rowe Price Associates, Inc., is required to permanently waive a portion of its management fee charged to the fund in an amount sufficient to fully offset that portion of management fee paid by each underlying T. Rowe Price Fund related to the fund's investment therein. The amount of the waiver will vary each fiscal year in proportion to the amount invested in other T. Rowe Price Funds. The T. Rowe Price Funds would be required to seek regulatory approval in order to terminate this arrangement.

^d T. Rowe Price Associates, Inc., has contractually agreed (through February 28, 2022) to waive its fees and/or bear any expenses (excluding interest; expenses related to borrowings, taxes, and brokerage; nonrecurring, extraordinary expenses; and acquired fund fees and expenses) that would cause the class' ratio of expenses to average daily net assets to exceed 1.19%. The agreement may only be terminated at any time after February 28, 2022, with approval by the fund's Board of Directors. Fees waived and expenses paid under this agreement (and a previous limitation of 1.19%) are subject to reimbursement to T. Rowe Price Associates, Inc., by the fund whenever the class' expense ratio is below 1.19%. However, no reimbursement will be made more than three years from the date such amounts were initially waived or reimbursed. The fund may only make repayments to T. Rowe Price Associates, Inc., if such repayment does not cause the class' expense ratio (after the repayment is taken into account) to exceed the lesser

of: (1) the expense limitation in place at the time such amounts were waived; or (2) the class' current expense limitation.

^e T. Rowe Price Associates, Inc., has contractually agreed (through February 28, 2022) to pay the operating expenses of the fund's I Class excluding management fees; interest; expenses related to borrowings, taxes, and brokerage; nonrecurring, extraordinary expenses; and acquired fund fees and expenses ("I Class Operating Expenses"), to the extent the I Class Operating Expenses exceed 0.05% of the class' average daily net assets. The agreement may only be terminated at any time after February 28, 2022, with approval by the fund's Board of Directors. Any expenses paid under this agreement (and a previous limitation of 0.05%) are subject to reimbursement to T. Rowe Price Associates, Inc., by the fund whenever the fund's I Class Operating Expenses are below 0.05%. However, no reimbursement will be made more than three years from the date such amounts were initially waived or reimbursed. The fund may only make repayments to T. Rowe Price Associates, Inc., if such repayment does not cause the I Class Operating Expenses (after the repayment is taken into account) to exceed the lesser of: (1) the limitation on I Class Operating Expenses in place at the time such amounts were waived; or (2) the current expense limitation on I Class Operating Expenses.

^f T. Rowe Price Associates, Inc., has contractually agreed (through February 28, 2022) to waive its fees and/or bear any expenses (excluding interest; expenses related to borrowings, taxes, and brokerage; nonrecurring, extraordinary expenses; and acquired fund fees and expenses) that would cause the class' ratio of expenses to average daily net assets to exceed 1.60%. The agreement may only be terminated at any time after February 28, 2022, with approval by the fund's Board of Directors. Fees waived and expenses paid under this agreement (and a previous limitation of 1.60%) are subject to reimbursement to T. Rowe Price Associates, Inc., by the fund whenever the class' expense ratio is below 1.60%. However, no reimbursement will be made more than three years from the date such amounts were initially waived or reimbursed. The fund may only make repayments to T. Rowe Price Associates, Inc., if such repayment does not cause the class' expense ratio (after the repayment is taken into account) to exceed the lesser of: (1) the expense limitation in place at the time such amounts were waived; or (2) the class' current expense limitation.

Example This example is intended to help you compare the cost of investing in the fund with the cost of investing in other mutual funds. The example assumes that you invest \$10,000 in the fund for the time periods indicated and then redeem all of your shares at the end of those periods, that your investment has a 5% return each year, and that the fund's operating expenses remain the same. The example also assumes that any current expense limitation arrangement remains in place for the period noted in the table above; therefore, the figures have been adjusted to reflect fee waivers or expense reimbursements only in the periods for which the expense limitation arrangement is expected to continue. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 year	3 years	5 years	10 years
Investor Class	\$131	\$485	\$863	\$1,924
I Class	116	458	823	1,851
Advisor Class	173	684	1,221	2,692

Portfolio Turnover The fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when the fund's shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, affect the fund's performance. During the most recent fiscal year, the fund's portfolio turnover rate was 99.5% of the average value of its portfolio.

Investments, Risks, and Performance

Principal Investment Strategies

The fund uses a highly flexible investment approach in an effort to provide attractive returns, relative to the returns on cash, that are uncorrelated to moves in the broader equity and fixed income markets through various market environments, as well as to maintain low overall volatility. The fund has broad discretion in seeking investments and utilizes a wide range of strategies to invest across a variety of asset classes including stocks, fixed-income securities, and derivatives.

The fund primarily seeks exposure to the following strategies, which rely on both fundamental and quantitative research, and are described in more detail below: Macro and Absolute Return; Fixed Income Absolute Return; Equity Research Long/Short; Quantitative Equity Long/Short; Volatility Relative Value; Style Premia; Dynamic Global FX; Dynamic Credit; Global Stock; and Sector Strategies. The fund's allocation to a particular strategy will vary, and the fund may not have exposure to all of the strategies at all times. The fund's overall allocation to each component strategy is driven by both risk analytics and the adviser's outlook on the global economy and securities markets. Through exposure to these strategies, the fund seeks returns that are independent of market direction.

The fund expects to primarily allocate its overall portfolio among the following strategies:

Macro and Absolute Return This strategy seeks to leverage T. Rowe Price's global research expertise to select investments that represent, in the adviser's opinion, the best investment ideas across all equity and fixed income asset classes. The ideas can be macro in nature, meaning that they rely on T. Rowe Price's analysis and prediction of large-scale events or trends that create the potential for strong performance, or they can be security-specific ideas that are focused on the expected return of a particular security or group of securities. This strategy may use call and put options, equity index futures, bond or interest rate futures, total return swaps, and credit default swaps.

Fixed Income Absolute Return This flexible fixed income strategy seeks consistent positive returns without constraints to particular benchmarks or fixed income asset classes, such as government-issued securities or corporate bonds. The strategy has broad discretion to adjust duration (which measures price sensitivity to interest rate changes), credit exposure (which refers to the allocation between investment-grade and non-investment grade instruments, commonly known as junk bonds), and overall volatility (which refers to the amount of risk associated with the strategy as a whole) based on interest rates and global fixed income investing conditions. The fund may invest in the T. Rowe Price Dynamic Global Bond Fund as an efficient means of gaining exposure to this strategy. While most assets are typically invested in bonds and other debt instruments, this strategy also uses interest rate futures, interest rate swaps, forward currency exchange contracts, and credit default swaps.

Equity Research Long/Short This strategy relies on T. Rowe Price's extensive fundamental research capabilities to provide long and short exposure to global large-cap stocks. Utilizing a proprietary global rating system developed and maintained by T. Rowe Price, long positions

are established in the stocks of companies that the adviser views as most attractive within the large-cap stock universe and short positions are established in companies viewed as least attractive. The strategy leverages T. Rowe Price analyst convictions in companies to create a dynamically traded component portfolio that seeks to achieve returns that are not closely correlated with the returns of the overall equity markets.

Quantitative Equity Long/Short This strategy relies on T. Rowe Price's quantitative research capabilities to provide long and short exposure to small- and mid-cap U.S. stocks. Utilizing quantitative models developed by T. Rowe Price, stocks are ranked based on various metrics with long positions established in higher ranked securities and short positions established in lower ranked securities.

Volatility Relative Value This strategy compares the market price of an option to our own forecast of the risk associated with the option's underlying reference asset (including, among others, a treasury future or an equity index). Based on this analysis, we can form a view on whether that option is trading above or below fair value. We select investments for the strategy by selling options (if they are deemed overpriced by the adviser) and buying options (if they are deemed underpriced by the adviser).

Style Premia This strategy analyzes various instruments across certain asset classes, which primarily include currencies, equity index futures, and bond or interest rate futures, in order to select investments based on whether the instrument exhibited positive characteristics or factors. Instruments in each asset class are evaluated based on factors the adviser believes to be predictive of attractive return. These factors include, but are not limited to, value (which focuses on investments that appear cheap over those that appear expensive), momentum (which focuses on investments that have performed well over those that have underperformed over a given period of time), and carry (which focuses on investments with natural or implied higher yields over those with lower yields, seeking to capture the tendency for higher-yielding assets to provide higher returns than lower-yielding assets). The resulting component portfolio aims to have positive ("long") exposure to instruments that measured favorably under our factors and negative ("short") exposure to those that measured unfavorably.

Dynamic Global FX This global currency strategy uses forward currency exchange contracts to generate returns by gaining long or short exposure to certain currencies that are expected to increase or decrease in value relative to other currencies. Investments selected for the portfolio represent high-conviction views driven by T. Rowe Price's extensive research platform and include a diversified set of developed and emerging markets.

Dynamic Credit This is a highly flexible strategy that invests in a variety of debt instruments (including derivatives) with an emphasis on finding asymmetric long and short opportunities in individual issuers while actively managing volatility inherent in credit investing. The fund may invest in the T. Rowe Price Dynamic Credit Fund to gain exposure to this strategy.

Global Stock This strategy seeks to capture the excess return of T. Rowe Price's Global Stock Fund over its benchmark. The underlying equity strategy, the Global Stock Fund, reflects a growth style and seeks to obtain exposure to stocks in at least five countries, including both

developed and, to a lesser extent, emerging markets. To implement this strategy, the fund may invest in the Global Stock Fund (or securities that align with the strategy) and short a basket of equity futures and/or use a variety of total return swaps, consisting of both long and short positions, on specific stocks that align with the Global Stock Fund's portfolio relative to its benchmark.

Sector Strategies To implement this strategy, the fund will gain exposure to a mix of broad sectors, including, for example, the technology, industrials, consumer, health sciences, financial services, natural resources, and real estate sectors. This strategy seeks to capture the excess return of a mix of sector strategies over each strategy's respective benchmark. The allocation to specific sectors will change over time. The fund may invest in T. Rowe Price sector-focused funds and/or securities that align with the desired sector mix and short a basket of equity futures, and/or use a variety of total return swaps, consisting of both long and short positions, on specific stocks that align with the mix of underlying sectors relative to their respective benchmarks.

The fund has considerable flexibility in seeking capital preservation over time and low overall volatility, and its portfolio is constructed with a goal of providing consistent returns during any market environment. While the fund may lose value at times, the goal is to avoid periods of loss that coincide with negative returns in traditional asset classes, particularly equities. The fund's adviser may adjust the portfolio and overall risk profile by making tactical decisions to overweight or underweight particular strategies, asset classes, or sectors based on the adviser's outlook for the global economy and securities markets or risk considerations, as well as by establishing additional long or short positions outside of the strategies listed above, either through derivatives or physical securities.

The fund is "nondiversified," meaning it may invest a greater portion of its assets in fewer issuers than is permissible for a "diversified" fund.

The fund may invest in securities issued by both U.S. and non-U.S. issuers, including issuers in emerging market countries. The fund may invest in stocks issued by companies of any market capitalization. The fixed and floating rate securities in which the fund may invest include bonds issued by U.S. and foreign corporations and governments, and bank loans. The fund may gain exposure to short-term investment-grade corporate and government securities through investments in the T. Rowe Price Ultra Short-Term Bond and the T. Rowe Price Institutional Cash Reserves Funds. The fund may invest in debt instruments of any maturity, duration, or credit rating, including high yield or "junk" bonds. The fund may obtain exposure to commodities by investing in shares of one or more exchange-traded funds and exchange-traded notes (and total return swaps involving exchange-traded funds and exchange-traded notes) that invest in commodities.

The fund has the flexibility to obtain long and short positions through a variety of derivative instruments. When the fund takes a long position, it purchases a security that it anticipates will benefit from an increase in the price of that security. Similarly, taking a long position through a derivative instrument will benefit from an increase in the price of the underlying instrument. When a fund takes a short position, the fund borrows the security from a third party and sells it

at the then current market price. A short position will benefit from a decrease in price of the security and will lose value if the price of the security increases. The fund establishes its short positions through derivative instruments, which will benefit from a decrease in price of the underlying instrument and will lose value if the price of the underlying instrument increases. Simultaneously engaging in long investing and short selling is designed to reduce the net exposure of the overall portfolio to general market movements.

Derivatives in which the fund will invest include total return swaps, total return basket swaps, options, bond or other interest rate futures, equity index futures, forward currency exchange contracts, and credit default swaps for a variety of purposes, such as to efficiently access or adjust exposure to certain market segments, or in an attempt to manage portfolio volatility.

The fund expects to maintain long and short positions in equity securities, fixed income instruments, and commodity-based exchange-traded funds through total return swaps and total return basket swaps. Total return swaps and total return basket swaps may be used to obtain exposure to a security without owning or taking physical custody of such security. Total return swaps and total return basket swaps are bilateral contracts that provide all of the economic benefits and risks equivalent to direct investments. The value of these swaps also reflects a “financing cost” which includes interest charges and credits related to the notional values of the long and short positions and cash balances within the swap. While a long equity position will benefit from an increase in price of the security (or underlying security), a short equity position will benefit from a decrease in price of the security or underlying security and will lose value if the price of the security increases.

The fund’s use of options can involve selling or buying put or call options in order to monetize the adviser’s views on expected forward realized volatility, or for hedging purposes. Call options give the investor the right to purchase (when the investor purchases the option), or the obligation to sell (when the investor “writes” or sells the option), an asset at a predetermined price in the future. Put options give the purchaser of the option the right to sell, or the seller (or “writer”) of the option the obligation to buy, an asset at a predetermined price in the future. The fund’s use of options will primarily involve equity index options, but is expected to also include options on individual equities or in other asset classes. The fund has flexibility to write options with or without holding the underlying reference asset.

The fund may enter into a futures contract pursuant to which it agrees to sell an asset at a specified price at a specified point in the future. The fund’s use of futures typically serves as an efficient means of gaining exposure to a particular segment of the market (for example, to increase the fund’s exposure to movements in a particular index), to reduce (or hedge) the risk associated with price movements in an underlying asset by offsetting long and short positions, to adjust portfolio duration, or to reduce volatility either for the fund as a whole or within one of its underlying strategies.

The fund uses forward currency exchange contracts, which are contracts between two counterparties to exchange one currency for another on a future date at a specified exchange rate, primarily to reflect the adviser’s outlook on the strength or weakness of the U.S. dollar compared to foreign currencies and the relative value of various foreign currencies to one

another, although they may be used to protect certain holdings from adverse currency movements or to moderate the fund's overall currency exposure. The fund has flexibility to purchase and sell currencies independently of whether the fund owns instruments denominated in those currencies. The fund may take a short position in a currency, which means that the fund could sell a currency in excess of its assets denominated in that currency or sell a currency even if it does not own any assets denominated in that currency.

The fund may buy or sell credit default swaps involving a specific issuer or an index in order to adjust the fund's overall credit exposure, as well as to protect the value of certain portfolio holdings. Credit default swaps are agreements where one party (the protection buyer) will make periodic payments to another party (the protection seller) in exchange for protection against specified credit events, such as defaults and bankruptcies related to an issuer or underlying credit instrument.

The fund may engage in active and frequent trading of portfolio instruments to achieve its investment objective.

Principal Risks

As with any fund, there is no guarantee that the fund will achieve its objective(s). The fund's share price fluctuates, which means you could lose money by investing in the fund. The principal risks of investing in this fund, which may be even greater during periods of market disruption or volatility, are summarized as follows:

Stock investing Stocks generally fluctuate in value more than bonds and may decline significantly over short time periods. There is a chance that stock prices overall will decline because stock markets tend to move in cycles, with periods of rising and falling prices. The value of stocks held by the fund may decline due to general weakness or volatility in the stock markets in which the fund invests or because of factors that affect a particular company or industry.

Fixed income markets Economic and other market developments can adversely affect the fixed income securities markets. At times, participants in these markets may develop concerns about the ability of certain issuers of debt instruments to make timely principal and interest payments, or they may develop concerns about the ability of financial institutions that make markets in certain debt instruments to facilitate an orderly market. Those concerns could cause increased volatility and reduced liquidity in particular securities or in the overall fixed income markets and the related derivatives markets. A lack of liquidity or other adverse credit market conditions may hamper the fund's ability to sell the debt instruments in which it invests or to find and purchase suitable debt instruments.

Market conditions The value of the fund's investments may decrease, sometimes rapidly or unexpectedly, due to factors affecting an issuer held by the fund, particular industries, or the overall securities markets. A variety of factors can increase the volatility of the fund's holdings and markets generally, including political or regulatory developments, recessions, inflation, rapid interest rate changes, war or acts of terrorism, natural disasters, and outbreaks of infectious illnesses or other widespread public health issues such as the coronavirus pandemic

and related governmental and public responses. Certain events may cause instability across global markets, including reduced liquidity and disruptions in trading markets, while some events may affect certain geographic regions, countries, sectors, and industries more significantly than others. Government intervention in markets may impact interest rates, market volatility, and security pricing. These adverse developments may cause broad declines in market value due to short-term market movements or for significantly longer periods during more prolonged market downturns.

Derivatives The fund uses derivatives including total return swaps, total return basket swaps, options, bond or other interest rate futures, equity index futures, forward currency exchange contracts, and credit default swaps, and is therefore potentially exposed to additional losses not typically associated with direct investments in traditional securities. In addition, for instruments not traded on an exchange, there is a risk that a counterparty to the transaction could default and fail to meet its obligations under the derivatives contract. The values of the fund's positions in such derivatives will fluctuate in response to changes in the value of the underlying index or security and the fund is exposed to the risk that the underlying index or security will not move in a direction that is favorable to the fund.

Additionally, to the extent the fund is required to segregate or "set aside" liquid assets or otherwise cover open derivatives positions, the fund may be required to sell portfolio holdings to meet these segregation requirements. There is a possibility that the fund would be required to segregate a large percentage of the fund's assets, which could impede portfolio management or the fund's ability to meet redemption requests or other current obligations.

Leverage Establishing short positions and investing in futures contracts, options and swaps and other derivative instruments could give rise to economic leverage. These transactions may expose the fund to greater risk and increase its costs. The use of leverage may cause the fund to liquidate portfolio holdings when it may not be advantageous to do so to satisfy its obligations or to meet any required asset segregation requirements. Increases and decreases in the value of the fund's portfolio will be magnified when the fund uses leverage.

Short positions A short position in a derivative instrument involves the risk of a theoretically unlimited increase in the value of the underlying instrument, which could cause the fund to suffer a (potentially unlimited) loss. Short sales may also involve transaction and financing costs that will reduce potential fund gains and increase potential fund losses.

Options When the fund purchases an option, it may lose the premium paid for it if the price of the underlying security or other reference assets decreased or remained the same (in the case of a call option) or increased or remained the same (in the case of a put option). If a put or call option purchased by the fund were permitted to expire without being sold or exercised, its premium would represent a loss to the fund.

Swaps The fund's use of total return swaps, total return basket swaps, and credit default swaps subjects the fund to credit risks (if the counterparty fails to meet its obligations) and market risks (if there is no liquid market for the agreement or unfavorable changes occur to the underlying asset). Credit default swap agreements involve additional risks because they may be

difficult to value, are highly susceptible to liquidity and credit risk, and generally pay a return to the party that has paid the premium only in the event of an actual credit event (such as default by the issuer of the underlying obligation), as opposed to a credit downgrade or other indication of financial difficulty.

Forwards and futures contracts There may be an imperfect correlation between the change in market value of an instrument held by the fund and the price of a forward or futures contract. In addition, there may be a lack of a liquid secondary market for a forward or futures contract, which could result in an inability to close a forward or futures contract when desired. The fund may experience losses caused by unanticipated market movements, which are potentially unlimited. The fund is also subject to the risk that the fund's adviser is unable to predict correctly the direction of securities prices, interest rates, currency exchange rates and other factors.

Risk models and quantitative models Risk models are designed to provide risk forecasts, and as such realized risk can be materially different from expected risk as implied by the model. Since portfolio positioning is informed by the risk estimates, realized portfolio returns may be different (e.g., lower returns and/or greater experienced portfolio volatility) than intended by the adviser. In addition, the fund relies on quantitative models and the analysis of specific metrics to construct part of the fund's overall portfolio. The impact of risk and quantitative metrics on a security's performance can be difficult to predict, and securities that previously possessed certain desirable characteristics may not continue to demonstrate those same characteristics in the future. Relying on risk and quantitative models entails the risks that the models themselves may be limited or incorrect, that the data on which the models rely may be incorrect or incomplete, and that the adviser may not be successful in selecting securities for investment or determining the weighting of particular securities in the fund's portfolio. Any of these factors could cause the fund to underperform funds with similar strategies that do not select securities through the use of risk-based and/or quantitative models.

Currency exposure Because the fund invests in securities issued in foreign currencies, the fund is subject to the risk that it could experience losses based solely on the weakness of foreign currencies versus the U.S. dollar and changes in the exchange rates between such currencies and the U.S. dollar.

International investing Investing in the securities of non-U.S. issuers involves special risks not typically associated with investing in U.S. issuers. Non-U.S. securities tend to be more volatile and have lower overall liquidity than investments in U.S. securities and may lose value because of adverse local, political, social, or economic developments overseas, or due to changes in the exchange rates between foreign currencies and the U.S. dollar. In addition, investments outside the U.S. are subject to settlement practices and regulatory and financial reporting standards that differ from those of the U.S. The risks of investing outside the U.S. are heightened for any investments in emerging markets, which are susceptible to greater volatility than investments in developed markets.

Emerging markets Investments in emerging market countries are subject to greater risk and overall volatility than investments in the U.S. and other developed markets. Emerging market

countries tend to have economic structures that are less diverse and mature, less developed legal and regulatory regimes, and political systems that are less stable, than those of developed countries. In addition to the risks associated with investing outside the U.S., emerging markets are more susceptible to governmental interference, political and economic uncertainty, local taxes and restrictions on the fund's investments, less efficient trading markets with lower overall liquidity, and more volatile currency exchange rates.

Commodities Exposure to commodities may subject the fund to greater volatility than investments in traditional securities. The commodities markets may be affected by changes in overall market movements, commodity index volatility, changes in interest rates, or factors affecting a particular industry or commodity, such as drought, floods, weather, embargoes, tariffs, and international economic, political, and regulatory developments.

Bank loans Investments in bank loans expose the fund to additional risks beyond those normally associated with more traditional debt instruments. The fund's ability to receive payments in connection with the loan depends primarily on the financial condition of the borrower and whether or not a loan is secured by collateral, although there is no assurance that the collateral securing a loan will be sufficient to satisfy the loan obligation. In addition, bank loans often have contractual restrictions on resale, which can delay the sale and adversely impact the sale price. Transactions involving bank loans may have significantly longer settlement periods than more traditional investments (settlement can take longer than 7 days) and often involve borrowers whose financial condition is troubled or highly leveraged, which increases the risk that the fund may not receive its proceeds in a timely manner or that the fund may incur losses in order to pay redemption proceeds to its shareholders. In addition, loans are not registered under the federal securities laws like stocks and bonds, so investors in loans have less protection against improper practices than investors in registered securities.

Interest rates The prices of, and the income generated by, debt instruments held by the fund may be affected by changes in interest rates. A rise in interest rates typically causes the price of a fixed rate debt instrument to fall and its yield to rise. Conversely, a decline in interest rates typically causes the price of a fixed rate debt instrument to rise and the yield to fall. Generally, funds with longer weighted average maturities and durations carry greater interest rate risk. Changes in monetary policy made by central banks and/or governments such as the discontinuation and replacement of benchmark rates are likely to affect the level of interest rates.

LIBOR Transition Many financial instruments use or may use a floating rate based on the London Interbank Offered Rate, or "LIBOR," which is the offered rate for short-term Eurodollar deposits between major international banks. There remains uncertainty regarding the future utilization of LIBOR and the nature of any replacement rate. The elimination of LIBOR or changes to other reference rates or any other changes or reforms to the determination or supervision of reference rates could have an adverse impact on the market for, or value of, any securities or payments linked to those reference rates, which may adversely affect the fund's performance and/or net asset value.

Credit quality An issuer of a debt instrument could suffer an adverse change in financial condition that results in a payment default (failure to make scheduled interest or principal payments), rating downgrade, or inability to meet a financial obligation. Securities that are rated below investment grade carry greater risk of default and should be considered speculative.

Junk investing Investments in bonds that are rated below investment grade, commonly referred to as junk bonds, and loans that are rated below investment grade, expose the fund to greater volatility and credit risk than investments in securities that are rated investment grade. Issuers of junk bonds and loans are usually not as strong financially and are more likely to suffer an adverse change in financial condition that would result in the inability to meet a financial obligation. As a result, bonds and loans rated below investment grade carry a higher risk of default and should be considered speculative.

Exchange-traded funds The fund will bear its proportionate share of the fees and expenses of each exchange-traded fund in which it invests. An investment in an exchange-traded fund involves substantially the same risks as investing directly in the exchange-traded fund's underlying assets, although an exchange-traded fund may trade at a premium or discount to the actual net asset value of its portfolio securities, may have greater price volatility than its underlying assets, and its shares may have lower overall liquidity.

Liquidity The fund may not be able to meet requests to redeem shares issued by the fund without significant dilution of the remaining shareholders' interest in the fund. In addition, the fund may not be able to sell a holding in a timely manner at a desired price. Reduced liquidity in the bond markets can result from a number of events, such as limited trading activity, reductions in bond inventory, and rapid or unexpected changes in interest rates. Markets with lower overall liquidity could lead to greater price volatility and limit the fund's ability to sell a holding at a suitable price.

Nondiversification As a nondiversified fund, the fund has the ability to invest a larger percentage of its assets in the securities of a smaller number of issuers than a diversified fund. As a result, poor performance by a single issuer could adversely affect fund performance more than if the fund were invested in a larger number of issuers. The fund's share price can be expected to fluctuate more than that of a similar fund that is more broadly diversified.

Active management The fund's overall investment program and holdings selected by the fund's investment adviser may underperform the broad markets, relevant indices, or other funds with similar objectives and investment strategies.

Cybersecurity breaches The fund could be harmed by intentional cyberattacks and other cybersecurity breaches, including unauthorized access to the fund's assets, customer data and confidential shareholder information, or other proprietary information. In addition, a cybersecurity breach could cause one of the fund's service providers or financial intermediaries to suffer unauthorized data access, data corruption, or loss of operational functionality.

Performance

The following performance information provides some indication of the risks of investing in the fund. The fund's performance information represents only past performance (before and after taxes) and is not necessarily an indication of future results.

The following bar chart illustrates how much returns can differ from year to year by showing calendar year returns and the best and worst calendar quarter returns during those years for the fund's Investor Class. Returns for other share classes vary since they have different expenses.

MULTI-STRATEGY TOTAL RETURN FUND

Calendar Year Returns

	Quarter Ended	Total Return	Quarter Ended	Total Return	
Best Quarter	6/30/20	7.59%	Worst Quarter	3/31/20	-3.21%

The following table shows the average annual total returns for each class of the fund that has been in operation for at least one full calendar year, and also compares the returns with the returns of a relevant broad-based market index, as well as with the returns of one or more comparative indexes that have investment characteristics similar to those of the fund, if applicable.

In addition, the table shows hypothetical after-tax returns to demonstrate how taxes paid by a shareholder may influence returns. After-tax returns are calculated using the historical highest individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor's tax situation and may differ from those shown. After-tax returns shown are not relevant to investors who hold their fund shares through tax-deferred arrangements, such as a 401(k) account or an IRA. After-tax returns are shown only for the Investor Class and will differ for other share classes.

Average Annual Total Returns

Investor Class	Periods ended December 31, 2020		Inception date 02/23/2018
	1 Year	Since inception	
Returns before taxes	13.20 %	5.51%	
Returns after taxes on distributions	11.70	4.11	
Returns after taxes on distributions and sale of fund shares	7.82	3.62	
I Class			02/23/2018
Returns before taxes	13.38	5.64	
ICE BofA US 3-Month Treasury Bill Index (reflects no deduction for fees, expenses, or taxes)	0.67	1.62 ^a	

^a Return since 2/23/18.

Updated performance information is available through troweprice.com.

Management

Investment Adviser T. Rowe Price Associates, Inc. (T. Rowe Price or Price Associates)

Portfolio Manager	Title	Managed Fund Since	Joined Investment Adviser
Richard de los Reyes	Cochair of Investment Advisory Committee	2018	2006
Stefan Hubrich	Cochair of Investment Advisory Committee	2018	2005

Purchase and Sale of Fund Shares

The Investor Class and Advisor Class generally require a \$2,500 minimum initial investment (\$1,000 minimum initial investment if opening an IRA, a custodial account for a minor, or a small business retirement plan account). Additional purchases generally require a \$100 minimum. These investment minimums generally are waived for financial intermediaries and certain employer-sponsored retirement plans submitting orders on behalf of their customers. Advisor Class shares may generally only be purchased through a financial intermediary or retirement plan. The Advisor Class has not incepted and is not yet available for public purchase.

The I Class requires a \$1 million minimum initial investment and there is no minimum for additional purchases, although the initial investment minimum generally is waived for

financial intermediaries, retirement plans, and certain client accounts for which T. Rowe Price or its affiliate has discretionary investment authority.

For investors holding shares of the fund directly with T. Rowe Price, you may purchase, redeem, or exchange fund shares by mail; by telephone (1-800-225-5132 for IRAs and nonretirement accounts; 1-800-492-7670 for small business retirement plans; and 1-800-638-8790 for institutional investors and financial intermediaries); or, for certain accounts, by accessing your account online through **troweprice.com**.

If you hold shares through a financial intermediary or retirement plan, you must purchase, redeem, and exchange shares of the fund through your intermediary or retirement plan. You should check with your intermediary or retirement plan to determine the investment minimums that apply to your account.

Tax Information

Any dividends or capital gains are declared and paid annually, usually in December. Redemptions or exchanges of fund shares and distributions by the fund, whether or not you reinvest these amounts in additional fund shares, generally may be taxed as ordinary income or capital gains unless you invest through a tax-deferred account (in which case you will be taxed upon withdrawal from such account).

Payments to Broker-Dealers and Other Financial Intermediaries

If you purchase shares of the fund through a broker-dealer or other financial intermediary (such as a bank), the fund and its related companies may pay the intermediary for the sale of fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the fund over another investment. Ask your salesperson or visit your financial intermediary's website for more information.

MANAGEMENT OF THE FUND

Investment Adviser(s)

T. Rowe Price is the fund's investment adviser and oversees the selection of the fund's investments and management of the fund's portfolio pursuant to an investment management agreement between the investment adviser and the fund. T. Rowe Price is the investment adviser for all mutual funds sponsored and managed by T. Rowe Price (T. Rowe Price Funds); is an SEC-registered investment adviser that provides investment management services to individual and institutional investors and sponsors; and serves as adviser and subadviser to registered investment companies, institutional separate accounts, and common trust funds. The address for T. Rowe Price is 100 East Pratt Street, Baltimore, Maryland 21202. As of December 31, 2020, T. Rowe Price and its affiliates (Firm) had approximately \$1.47 trillion in assets under management and provided investment management services for more than 6.6 million individual and institutional investor accounts.

Portfolio Management

T. Rowe Price has established an Investment Advisory Committee with respect to the fund. The committee cochair is ultimately responsible for the day-to-day management of the fund's portfolio and work with the committee in developing and executing the fund's investment program. The members of the committee are as follows: Richard de los Reyes and Stefan Hubrich, Cochair, Arif Husain, John D. Linehan, Sebastien Page, Robert W. Sharps, and Justin Thomson. The following information provides the year that the cochair (portfolio managers) first joined the Firm and the cochair's specific business experience during the past five years (although the cochair may have had portfolio management responsibilities for a longer period). Mr. de los Reyes has been cochair of the committee since the fund's inception in 2018. He joined the Firm in 2006 and his investment experience dates from 1996. During the past five years, he has served as a portfolio manager focusing on the Firm's global metals and mining and global allocation strategies, and co-portfolio manager of the fund (beginning in 2018). Mr. Hubrich has been cochair of the committee since the fund's inception in 2018. He joined the Firm in 2005 and his investment experience dates from 2003. During the past five years, he has served as the director of asset allocation research, an associate portfolio manager focusing on the Firm's global allocation strategy, and co-portfolio manager of the fund (beginning in 2018). The Statement of Additional Information provides additional information about the portfolio managers' compensation, other accounts managed by the portfolio managers, and the portfolio managers' ownership of the fund's shares.

The Management Fee

The management fee consists of two components—an "individual fund fee," which reflects the fund's particular characteristics, and a "group fee." The group fee, which is designed to reflect the benefits of the shared resources of the Firm, is calculated daily based on the combined net

assets of all T. Rowe Price Funds (except the funds-of-funds, TRP Reserve Funds, Multi-Sector Account Portfolios, and any index or private-label mutual funds). The group fee schedule (in the following table) is graduated, declining as the combined assets of the T. Rowe Price Funds rise, so shareholders benefit from the overall growth in mutual fund assets.

Group Fee Schedule

0.334%*	First \$50 billion
0.305%	Next \$30 billion
0.300%	Next \$40 billion
0.295%	Next \$40 billion
0.290%	Next \$60 billion
0.285%	Next \$80 billion
0.280%	Next \$100 billion
0.275%	Next \$100 billion
0.270%	Next \$150 billion
0.265%	Next \$195 billion
0.260%	Thereafter

* Represents a blended group fee rate containing various breakpoints.

The fund's group fee is determined by applying the group fee rate to the fund's average daily net assets. On October 31, 2020, the effective annual group fee rate was 0.29%. The individual fund fee, also applied to the fund's average daily net assets, is 0.71%.

A discussion about the factors considered by the fund's Board of Directors (Board) and its conclusions in approving the fund's investment management agreement (and any subadvisory agreement, if applicable) appear in the fund's semiannual report to shareholders for the period ended April 30.

MORE INFORMATION ABOUT THE FUND'S INVESTMENT OBJECTIVE(S), STRATEGIES, AND RISKS

Investment Objective(s)

The fund seeks strong long-term risk adjusted returns.

Principal Investment Strategies

The fund seeks to invest across several strategies and a variety of asset classes. The fund has the flexibility to utilize a multi-asset universe to source its investments, and T. Rowe Price may select investments by either analyzing the broad market or an individual security. Many positions are hedged, and the fund may employ both long and short positions in the same or related asset classes or security. In addition, the fund blends several different investment management strategies to select fund positions. The fund's exposure to a variety of different strategies and asset classes means your ability to achieve long-term risk adjusted returns do not hinge on the performance of any one asset class or the success of any particular investment

approach. While there is no guarantee, spreading investments across various types of assets is expected to reduce the fund's overall volatility, since prices of different asset classes may respond differently to changes in economic conditions and interest rate levels.

The fund generally intends to maintain a low average correlation to the equity, bond, and credit markets. The fund has no limits with respect to the market capitalization of the stocks in which it invests or the credit rating, maturity, or duration of the debt instruments in which it invests. T. Rowe Price attempts to mitigate risk through broad diversification of holdings, active monitoring of volatility and other risk measures, and strategic allocations to certain underlying strategies.

The fund offers a way to gain exposure to a variety of strategies, although T. Rowe Price is continuously researching new strategies that may be employed at any time. The current strategies used as components of the fund's overall portfolio are as follows:

Macro and Absolute Return Strategy This strategy seeks to leverage T. Rowe Price's global research expertise to select investments that represent, in T. Rowe Price's opinion, the best investment ideas across all liquid asset classes. The ideas can be macro in nature, meaning that they are chosen based on an analysis of overall economic and political views or other macroeconomic principles, or can be security-specific positions that are chosen based on a variety of principles.

Fixed Income Absolute Return Strategy This fixed income strategy is oriented towards generating a consistent positive return regardless of market cycle. The strategy utilizes a flexible, benchmark agnostic approach to invest across the full global fixed income opportunity set. The strategy seeks to provide stability particularly when interest rates are rising or creditworthiness is deteriorating, and to provide diversification during periods of investor risk aversion and negative performance in the equity markets. The fund's exposure to this strategy may be achieved in whole or in part through an investment in the T. Rowe Price Dynamic Global Bond Fund, which seeks income and consistent returns through a flexible allocation to global bonds and other debt instruments, while aiming to offer some protection against rising interest rates and provide a low correlation to equity markets.

Equity Research Long/Short Strategy This is a research-driven global equity strategy that focuses on large-cap stocks. The portfolio is created by establishing long positions in those companies that T. Rowe Price views as most attractive within the large-cap stock universe and establishing short positions in companies viewed as least attractive. The strategy is designed to leverage T. Rowe Price analyst convictions to create a dynamically traded portfolio with reduced correlation to the overall equity markets.

Quantitative Equity Long/Short Strategy This is a diversified absolute return strategy that uses quantitative research to select small- and mid-cap U.S. stocks. The strategy relies on security selection models to rank stocks on various metrics and factors. Individual factors are weighted and stocks are ranked based on their combined score from most attractive to least attractive. The portfolio is created by establishing long positions in companies that the

quantitative models identify as most attractive within the small- and mid-cap stock universe and establishing short positions in companies viewed as least attractive.

Volatility Relative Value Strategy This strategy focuses on potential valuation discrepancies in related financial instruments. The price of an option is tied to the risk of the option's underlying reference asset and reflects the expectation of option market participants regarding the riskiness of that underlying asset. Option prices will generally be higher when the underlying asset is perceived to be more risky in terms of its possible price variation or volatility. For a variety of behavioral, economic, and structural reasons, the option market for certain assets (such as, for example, an equity index option or a treasury future) tends to reflect a degree of risk that is greater than the market volatility typically observed for the underlying asset. This strategy focuses on the relationship between implied volatility (by option market participants) and actual amount of variation in the underlying asset since the market generally assumes that there will be more volatility in the asset's return than what actually occurs on average. By comparing the market price of the option to our own forecast of the underlying asset's riskiness, we can form a view on whether that option is trading above or below fair value. Based on this analysis, we select investments for the strategy by selling (if it's deemed too expensive) or buying (if it's deemed too cheap) one or several options.

Style Premia Strategy This strategy is designed to capture systematic excess returns that exist at an asset class level, including groups of stocks or bonds, as well as with respect to interest rates or currencies. Factors such as value (e.g., price-to-earnings and price-to-book ratios), momentum (e.g., recent outperformance or underperformance relative to similar investments), and carry (e.g., favoring higher yielding investments and using interest rate evaluations to select currencies or bonds) are used to construct the strategy in a risk-based manner.

Dynamic Global FX This strategy seeks to generate performance through income and capital gains in global currency markets. The strategy takes relative value currency positions by primarily using forward currency exchange contracts to gain long or short exposure to certain currencies that are expected to increase or decrease in value relative to other currencies. The investments that are selected represent a diversified set of developed and emerging markets currency exposures and seek to create a portfolio with a reduced correlation to established fixed income asset classes and the U.S. dollar.

Dynamic Credit This strategy leverages T. Rowe Price's global credit platform to identify individual credit instruments with asymmetric return potential on both the long and the short side. The strategy seeks to exploit inefficiencies in credit markets either by investing directly in credit instruments or by obtaining synthetic exposure from a range of instrument types, including derivatives. This strategy may invest in a variety of credit instruments, including high yield instruments, bank loans, mortgage- and asset-backed securities, issuers in emerging markets, corporate bonds, municipal securities, and derivatives (including credit default swaps, total return swaps, interest rate futures, interest rate swaps, forward currency exchange contracts, and options on such instruments). The strategy seeks to actively manage downside exposure through the credit cycle, including the ability to hedge at the strategy or asset class level, or increase exposure to the overall credit market, where appropriate.

Global Stock This strategy seeks to capture the excess return of T. Rowe Price's Global Stock Fund over its benchmark. The underlying equity fund, the Global Stock Fund, seeks to obtain exposure to stocks in at least five countries (one of which is the U.S.), including both developed and emerging markets. Investment selection reflects a growth style. While the strategy has the flexibility to obtain exposure to stocks of companies of any size, investments will typically focus on large- and mid-cap growth stocks. To implement this strategy, the fund may invest in the Global Stock Fund (or securities that align with the strategy) and short a basket of equity futures and/or use a variety of total return swaps, consisting of both long and short positions, on specific stocks that align with the Global Stock Fund's portfolio relative to its benchmark.

Sector Strategies This strategy seeks to capture the excess return of a mix of sector strategies over each strategy's respective benchmark. To implement this strategy, the fund will gain exposure to a mix of broad sectors, including, for example, the technology, industrials, consumer, health sciences, financial services, natural resources, and real estate sectors. The allocation to specific sectors will change over time. The fund may invest in T. Rowe Price sector-focused funds and/or securities that align with the desired sector mix and short a basket of equity futures, and/or use a variety of total return swaps, consisting of both long and short positions, on specific stocks that align with the mix of underlying sectors relative to their respective benchmarks.

Each of the strategies is constructed using its own specific investment process, which is generally based on T. Rowe Price's global research expertise to make the investment decisions within each component. The fund's portfolio managers develop targeted exposure levels for each of the underlying strategies using a risk-based analysis. The holdings within the underlying component strategies are then combined to create the fund's overall portfolio. T. Rowe Price regularly reviews the overall allocation to each strategy and makes changes based on risk analytics or the portfolio managers' outlook for the economy and financial markets.

Based on both fundamental research and quantitative models, T. Rowe Price regularly maintains long positions in companies or indexes, either directly or through the use of total return swaps or total return basket swaps. In addition, T. Rowe Price has the flexibility to maintain short positions in companies or indexes, either directly or through the use of total return swaps or total return basket swaps.

The fund utilizes a variety of other derivative instruments, including an option strategy, which typically involves writing (i.e., selling) or holding (i.e., buying) call or put options on stocks, stock indexes, investment-grade bonds, U.S. Treasury futures, or some other reference asset in an effort to monetize T. Rowe Price's views on expected forward realized volatility, or for hedging purposes. As the seller of a call option, the fund receives a premium from the purchaser, who has the right to any appreciation in the value of the underlying reference asset (e.g., the stock, index, or U.S. Treasury future) over a fixed price (the "strike price") on or before a certain date in the future (the "expiration date"). If the purchaser does not exercise the option, the seller retains the premium and, if the purchaser exercises the option, the seller either, (i) pays the purchaser the difference between the value of the underlying reference asset and the strike price of the option, (ii) accepts delivery of the underlying reference asset, or

(iii) delivers the underlying reference asset. In addition to buying and selling call options, the fund's option strategy could also involve the buying or selling of put options.

The fund uses futures to manage the overall exposure to particular asset classes. The fund may buy index futures contracts mainly as an efficient means of gaining exposure to a particular segment of the market, as well as to serve as a cash management tool and to enhance the fund's returns. Although index futures are designed to represent a segment of the market, their returns have at times exceeded the value of their underlying index, which could serve as a favorable alternative to directly purchasing individual stocks; however, at times their returns have underperformed and would not serve as a favorable alternative to directly purchasing individual stocks. The fund's long futures positions are rolled over on a regular basis in an effort to maintain the fund's exposure to a particular segment of the market in the desired proportion to the fund's overall exposure. The fund may use futures to respond to interest rate changes and adjust the duration of the fund's bond portfolio, as well as a cash management tool.

The fund typically uses forward currency exchange contracts and other currency derivatives to make active investments, long and short, with respect to certain currencies or to help protect a portion of its international equity holdings from unfavorable changes in foreign currency exchange rates. The use of such instruments is intended to moderate the overall currency risk inherent in a global portfolio and should benefit the fund during periods of a strong U.S. dollar, as well as to seek incremental returns where currencies are expected to strengthen or weaken versus one another.

The fund may buy credit default swaps to protect against or capitalize on a negative credit event (such as a bankruptcy or downgrade) and an expected decline in the creditworthiness of an issuer, which would lead to a decrease in the value of the securities it issues. The fund may also sell credit default swaps to benefit from an expected improvement in an issuer's creditworthiness or to gain leveraged long exposure to an issuer. In addition, the fund may use credit default swap indexes to hedge the portfolio's overall credit risk or to efficiently gain exposure to certain sectors or asset classes (such as high yield bonds).

Common and Preferred Stocks

Stocks represent shares of ownership in a company. Generally, preferred stocks have a specified dividend rate and rank after bonds and before common stocks in their claim on income for dividend payments and on assets should the company be liquidated. After other claims are satisfied, common stockholders participate in company profits on a pro-rata basis and profits may be paid out in dividends or reinvested in the company to help it grow. Increases and decreases in earnings are usually reflected in a company's stock price, so common stocks generally have the greatest appreciation and depreciation potential of all corporate securities. Unlike common stock, preferred stock does not ordinarily carry voting rights. While most preferred stocks pay a dividend, the fund may decide to purchase preferred stock where the issuer has suspended, or is in danger of suspending, payment of its dividend.

Convertible Securities and Warrants

The fund may invest in debt instruments or preferred equity securities that are convertible into, or exchangeable for, equity securities at specified times in the future and according to a certain exchange ratio. Convertible bonds are typically callable by the issuer, which could in effect force conversion before the holder would otherwise choose. Traditionally, convertible securities have paid dividends or interest at rates higher than common stocks but lower than nonconvertible securities. They generally participate in the appreciation or depreciation of the underlying stock into which they are convertible, but to a lesser degree than common stock. Some convertible securities combine higher or lower current income with options and other features. Warrants are options to buy, directly from the issuer, a stated number of shares of common stock at a specified price anytime during the life of the warrants (generally, two or more years). Warrants have no voting rights, pay no dividends, and can be highly volatile. In some cases, the redemption value of a warrant could be zero.

Bonds

A bond is an interest-bearing security. The issuer has a contractual obligation to pay interest at a stated rate on specific dates and to repay principal (the bond's face value) on a specified date. An issuer may have the right to redeem or "call" a bond before maturity, and the investor may have to invest the proceeds at lower market rates. Bonds can be issued by U.S. and foreign governments, states, and municipalities, as well as a wide variety of companies.

A bond's annual interest income, set by its coupon rate, is usually fixed for the life of the bond. Its yield (income as a percent of current price) will fluctuate to reflect changes in interest rate levels. A bond's price usually rises when interest rates fall and vice versa, so its yield generally stays consistent with current market conditions.

Conventional fixed rate bonds offer a coupon rate for a fixed maturity with no adjustment for inflation. Real rate of return bonds also offer a fixed coupon but include ongoing inflation adjustments for the life of the bond.

Certain bonds have floating or variable interest rates that are adjusted periodically based on a particular index. These interest rate adjustments tend to minimize fluctuations in the bonds' principal values. The maturity of certain floating rate securities may be shortened under certain specified conditions.

Bonds, including asset- and mortgage-backed securities, may be secured (backed by specific collateral) or may be unsecured (backed only by the issuer's general creditworthiness).

Foreign Securities

The fund may invest in foreign securities. Foreign securities could include non-U.S. dollar-denominated securities traded outside the U.S. and U.S. dollar-denominated securities of foreign issuers traded in the U.S. (such as Yankee bonds). Investing in foreign securities involves special risks that can increase the potential for losses. These include exposure to potentially adverse local, political, social, and economic developments such as war, political instability, hyperinflation, currency devaluations, and overdependence on particular industries; government interference in markets such as nationalization and exchange controls,

expropriation of assets, or imposition of punitive taxes; the imposition of international trade and capital barriers and other protectionist or retaliatory measures; potentially lower liquidity and higher volatility; possible problems arising from accounting, disclosure, settlement, and regulatory practices and legal rights that differ from U.S. standards; and the potential for fluctuations in foreign exchange rates to decrease the investment's value (favorable changes can increase its value). These risks are heightened for the fund's investments in emerging markets.

Mortgage-Backed Securities

The fund may invest in a variety of mortgage-backed securities. Mortgage lenders pool individual home mortgages with similar characteristics to back a certificate or bond, which is sold to investors such as the fund. Interest and principal payments generated by the underlying mortgages are passed through to the investors. The "big three" issuers are the Government National Mortgage Association, the Federal National Mortgage Association, and the Federal Home Loan Mortgage Corporation. Government National Mortgage Association certificates are backed by the full faith and credit of the U.S. government, while others, such as the Federal National Mortgage Association and Federal Home Loan Mortgage Corporation certificates, are only supported by the ability to borrow from the U.S. Treasury or by the credit of the agency. (The Federal National Mortgage Association and the Federal Home Loan Mortgage Corporation operate under conservatorship of the Federal Housing Finance Agency, an independent federal agency.) Private mortgage bankers and other institutions also issue mortgage-backed securities.

Mortgage-backed securities are subject to scheduled and unscheduled principal payments as homeowners pay down or prepay their mortgages. As these payments are received, they must be reinvested when interest rates may be higher or lower than on the original mortgage security. Therefore, these securities are not an effective means of locking in long-term interest rates. In addition, when interest rates fall, the rate of mortgage prepayments, including refinancings, tends to increase. Refinanced mortgages are paid off at face value or "par," causing a loss for any investor who may have purchased the security at a price above par. In such an environment, this risk limits the potential price appreciation of these securities and can negatively affect the fund's net asset value. When interest rates rise, the prices of mortgage-backed securities can be expected to decline. In addition, when interest rates rise and prepayments slow, the effective duration of mortgage-backed securities extends, resulting in increased price volatility.

Asset-Backed Securities

An underlying pool of assets, such as credit card or automobile trade receivables or corporate loans or bonds, backs these bonds and provides the interest and principal payments to investors. On occasion, the pool of assets may also include a swap obligation, which is used to change the cash flows on the underlying assets. As an example, a swap may be used to allow floating rate assets to back a fixed rate obligation. Credit quality depends primarily on the quality of the underlying assets, the level of any credit support provided by the structure or by a third-party insurance wrap or a line of credit, and the credit quality of the swap counterparty, if any. The underlying assets (i.e., loans) are sometimes subject to prepayments, which can

shorten the security's effective maturity and may lower its return. The value of these securities also may change because of actual or perceived changes in the creditworthiness of the individual borrowers, the originator, the servicing agent, the financial institution providing the credit support, or the swap counterparty. The fund will invest the loan proceeds in additional securities and other assets consistent with its investment program. Investments in asset-backed securities can include collateralized loan obligations, which take the form of a special purpose vehicle that owns a pool of loans and receives repayments and cash flows from those loans. The underlying loans are organized into tranches based on their risk profile, with cash flows generated by the underlying loans allocated so that each tranche has its own payment schedule and maturity.

Inflation-Linked Securities

Inflation-linked securities are income-generating instruments whose interest and principal payments are adjusted for inflation—a sustained increase in prices of goods and services that erodes the purchasing power of money. Treasury Inflation Protected Securities are inflation-linked securities issued by the U.S. government. Inflation-linked bonds are also issued by corporations, U.S. government agencies, and foreign governments. The inflation adjustment, which is typically applied monthly to the principal of the bond, follows a designated inflation index, such as the Consumer Price Index. A fixed coupon rate is applied to the inflation-adjusted principal so that as inflation rises, both the principal value and the interest payments increase. This can provide investors with a hedge against inflation, as it helps preserve the purchasing power of your investment. Because of this inflation-adjustment feature, inflation protected bonds typically have lower yields than conventional fixed rate bonds.

Municipal Securities

The fund may invest in municipal notes and bonds, which are interest-bearing securities issued by state and local governments and governmental authorities to pay for public projects and services. The issuer of a municipal security has a contractual obligation to pay interest at a stated rate and to repay principal (the bond's face value) on a specified date. An issuer may have the right to redeem or "call" a bond before maturity, which could require reinvestment of the proceeds at lower rates. The fund may purchase insured municipal bonds, which provide a guarantee that the bond's interest and principal will be paid when due if the issuing entity defaults. Municipal bond insurance does not guarantee the price of the bond.

Income received from most municipal securities is exempt from federal income taxes. As a result, the yield on a municipal bond is typically lower than the yield on a taxable bond of similar quality and maturity. Like a taxable bond, a municipal bond's price usually rises when interest rates fall and vice versa so its yield generally stays consistent with current market conditions.

Bank Loans

The fund may make investments in bank loans through the purchase or execution of a privately negotiated loan or note representing the equivalent of a loan, as well as through loan assignments and participations. Large loans to corporations or governments, including governments of less developed countries, may be shared or syndicated among several lenders,

usually banks. The fund could participate in such syndicates or could buy part of a loan, becoming a direct lender. These loans may often be obligations of companies or governments in financial distress or in default. These investments involve special types of risk, including those of being a lender, reduced liquidity, increased credit risk, and volatility.

Bank loans may be acquired directly through an agent acting on behalf of the lenders participating in the loan, as an assignment from another lender who holds a direct interest in the loan, or as a participation interest in another lender's portion of the loan. An assignment typically results in the purchaser succeeding to all rights and obligations under the loan agreement between the assigning lender and the borrower. However, assignments may be arranged through private negotiations, and the rights and obligations acquired by the purchaser of an assignment may differ from, and be more limited than, those held by the assigning lender.

A participation interest is a fractional interest in a loan, issued by a lender or other financial institution. To the extent the fund invests in loans through participation interests, it will be more difficult for it to enforce its rights against the borrower because it will have established a direct contractual relationship with the seller of the participation interest but not with the borrower. When the fund invests in a loan by participation, it must rely on another party not only for the enforcement of its rights against the borrower, but also for the receipt and processing of payments due under the loan. Investing in a participation interest limits the fund's ability to file a claim directly as a creditor in the event of the borrower's bankruptcy.

High Yield Bonds

The price and yield of noninvestment-grade (high yield) bonds, including noninvestment-grade emerging market bonds, can be expected to fluctuate more than the price and yield of higher-quality bonds. Because these bonds are rated below BBB (or an equivalent rating) or are in default, they are regarded as predominantly speculative with respect to the issuer's continuing ability to meet principal and interest payments. Successful investment in lower-medium and low-quality bonds involves greater investment risk and is highly dependent on T. Rowe Price's credit analysis. A real or perceived economic downturn or higher interest rates could cause a decline in high yield bond prices by lessening the ability of issuers to make principal and interest payments. These bonds are often thinly traded and can be more difficult to sell and value accurately than higher-quality bonds. Because objective pricing data may be less available, judgment may play a greater role in the valuation process. In addition, the entire high yield bond market can experience sudden and sharp price swings due to a variety of factors, including changes in economic forecasts, stock market activity, large or sustained sales by major investors, a high-profile default, or just a change in the market's psychology.

Derivatives

A derivative is a financial instrument whose value is derived from an underlying security, such as a stock or bond, or from a market benchmark, such as an interest rate index. Many types of investments representing a wide range of risks and potential rewards may be considered derivatives, including conventional instruments such as futures and options, as well as other potentially more complex investments such as swaps and structured notes. The use of

derivatives can involve leverage. Leverage has the effect of magnifying returns, positively or negatively. The effect on returns will depend on the extent to which an investment is leveraged. For example, an investment of \$1, leveraged at 2 to 1, would have the effect of an investment of \$2. Leverage ratios can be higher or lower with a corresponding effect on returns. The fund will routinely use derivatives in a variety of situations, including for the purposes of accomplishing any or all of the following: to hedge against a decline in principal value, to increase yield, to gain exposure to eligible asset classes or securities with greater efficiency and at a lower cost than is possible through a direct investment, or to adjust portfolio exposure to risk factors such as duration or credit risk exposures, or to implement active security or macro level positions in a way that best captures the underlying investment thesis and the associated risk characteristics. In accordance with the 1940 Act and various SEC positions, the fund must “set aside” (often referred to as “asset segregation”) liquid assets, or engage in other measures, to “cover” open positions with respect to certain kinds of derivative instruments.

Derivatives that may be used include the following instruments, as well as others that combine the risk characteristics and features of these instruments:

Futures Futures are often used to establish exposures, or manage or hedge risk, because they enable the investor to buy or sell an asset in the future at an agreed-upon price. Futures contracts may be bought or sold for any number of reasons, including to manage exposure to changes in interest rates, securities prices and indexes, currency exchange rates, and credit quality; as an efficient means of increasing or decreasing the fund’s exposure to certain markets; in an effort to enhance income; to improve risk-adjusted returns; to protect the value of portfolio securities; and to serve as a cash management tool. The fund may choose to continue a futures contract by “rolling over” an expiring futures contract into an identical contract with a later maturity date. This could increase the fund’s transaction costs and portfolio turnover rate. Futures contracts may not be successful investments or hedges, their prices can be highly volatile and their use could lower the fund’s total return, and the potential loss from the use of futures can exceed the fund’s initial investment in such contracts.

Options Options may be used to generate additional income, to enhance returns, or as a defensive technique to protect against anticipated declines in the value of an asset. Call options give the investor the right to purchase (when the investor purchases the option), or the obligation to sell (when the investor “writes” or sells the option), an asset at a predetermined price in the future. Put options give the purchaser of the option the right to sell, or the seller (or “writer”) of the option the obligation to buy, an asset at a predetermined price in the future. Call or put options may be purchased or sold on a variety of assets, including securities, financial indexes, currencies, futures, and swaps. Options may not always be successful hedges when used to mitigate risk, their prices can be highly volatile, and certain options could result in unlimited losses or the fund missing out on the benefit of an increase in the value of the contract’s underlying asset.

Swaps The fund may invest in interest rate, index, total return, total return basket, credit default, and other types of swap agreements, as well as options on swaps, commonly referred to as “swaptions,” and interest rate swap futures, which are instruments that provide a way to

obtain swap exposure and the benefits of futures in one contract. All of these agreements are considered derivatives and, in certain cases, high-risk derivatives. Interest rate, index, and total return swaps are two-party contracts under which the fund and a counterparty, such as a broker or dealer, agree to exchange the returns (or differentials in rates of return) earned or realized on particular predetermined investments or indexes. Credit default swaps are agreements where one party (the protection buyer) will make periodic payments to another party (the protection seller) in exchange for protection against specified credit events, such as defaults and bankruptcies related to an issuer or underlying credit instrument. Swap futures are futures contracts on interest rate swaps that enable purchasers to settle in cash at a future date at the price determined by a specific benchmark rate at the end of a fixed period. Swaps, swaptions, and swap futures can be used for a variety of purposes, including to manage the fund's overall exposure to changes in interest or foreign currency exchange rates and credit quality; as an efficient means of adjusting the fund's exposure to certain markets; in an effort to enhance income or total return or protect the value of portfolio securities; to serve as a cash management tool; and to adjust portfolio duration or credit risk exposure.

There are risks in the use of swaps and related instruments. Swaps could result in losses if interest or foreign currency exchange rates or credit quality changes are not correctly anticipated by the fund. Total return swaps and total return basket swaps are bilateral contracts that provide all of the economic benefits and risks equivalent to direct investments such as: capital appreciation (depreciation), corporate actions, and dividends and interest received and paid, all of which are reflected in the swap value. The value of these swaps also reflects a "financing cost" which includes interest charges and credits related to the notional values of the long and short positions and cash balances within the swap. The interest charges and credits are based on defined market rates plus or minus a specified spread. The swaps are reset periodically, generally monthly, and during the reset any realized gain (losses) on positions, income, proceeds from corporate actions and accrued financing costs may cause a cash settlement between the Fund and the swap counterparty. Cash settlement is generally determined based on limits and thresholds established as part of a master netting agreement between the fund and a counterparty and generally occur at a predetermined reset date; however, the fund and counterparty may cause a settlement on a date other than the prescribed reset date. Total return swaps and total return basket swaps could result in losses if the reference index, security, or investments do not perform as anticipated. Credit default swaps can increase the fund's exposure to credit risk and could result in losses if evaluation of the creditworthiness of the counterparty, or of the company or government on which the credit default swap is based, is incorrect. The use of swaps, swaptions, and swap futures may not always be successful. Using them could lower the fund's total return, their prices can be highly volatile, and the potential loss from the use of swaps can exceed the fund's initial investment in such instruments. Also, the other party to a swap agreement could default on its obligations or refuse to cash out the fund's investment at a reasonable price, which could turn an expected gain into a loss. Although there should be minimal counterparty risk associated with investments in interest rate swap futures, the fund could experience delays and/or losses due to the bankruptcy of a swap dealer through which the fund engaged in the transaction.

Currency Derivatives The fund may engage in foreign currency transactions either on a spot (cash) basis at the rate prevailing in the currency exchange market at the time or through forward currency exchange contracts, which are contracts between two counterparties to exchange one currency for another on a future date at a specified exchange rate. In addition to foreign currency forwards, futures, swaps, and options on foreign currencies may also be used to protect the fund's foreign securities from adverse currency movements relative to the U.S. dollar, as well as to gain exposure to currencies and markets expected to increase or decrease in value relative to other currencies or securities.

The fund may attempt to hedge its exposure to potentially unfavorable currency changes. Forward currency contracts can be used to adjust the foreign exchange exposure of the fund with a view to protecting the portfolio from adverse currency movements, based on the investment adviser's outlook. However, forward currency contracts can also be used in an effort to benefit from a currency believed to be appreciating in value versus other currencies. The fund may invest in non-U.S. currencies directly without holding any non-U.S. bonds or securities denominated in those currencies.

Forward currency contracts involve special risks, including, but not limited to, the potential for significant volatility in currency markets, and the risk that in certain markets, particularly emerging markets, it is not possible to engage in effective foreign currency hedging. In addition, such transactions involve the risk that currency movements will not occur as anticipated by the investment adviser, which could reduce the fund's total return.

It is important to note that hedging costs are treated as capital transactions and are not, therefore, deducted from the fund's dividend distribution and are not reflected in its yield. Instead, such costs will, over time, be reflected in the fund's net asset value per share and total return. Hedging may result in the application of the mark-to-market and straddle provisions of the Internal Revenue Code. These provisions could result in an increase (or decrease) in the amount of taxable dividends paid by the fund and could affect whether dividends paid by the fund are classified as capital gains or ordinary income.

When-Issued Securities and Forwards

The fund may purchase securities on a when-issued or delayed delivery basis or may purchase or sell securities on a forward commitment basis. There is no limit on the fund's investments in these securities. The price of these securities is fixed at the time of the commitment to buy, but delivery and payment take place after the customary settlement period for that type of security (often a month or more later). During the interim period, the price and yield of the securities can fluctuate, and typically no interest accrues to the purchaser. At the time of delivery, the market value of the securities may be more or less than the purchase or sale price. To the extent the fund remains fully or almost fully invested (in securities with a remaining maturity of more than one year) at the same time it purchases these securities, there will be greater fluctuations in the fund's net asset value than if the fund did not purchase them.

Investments in Other Investment Companies

The fund may invest in other investment companies, including open-end funds, closed-end funds, and exchange-traded funds.

The fund may purchase the securities of another investment company to temporarily gain exposure to a portion of the market while awaiting the purchase of securities or as an efficient means of gaining exposure to a particular asset class. The fund might also purchase shares of another investment company, including shares of other T. Rowe Price Funds, to gain exposure to the securities in the investment company's portfolio at times when the fund may not be able to buy those securities directly, or as a means of gaining efficient and cost-effective exposure to certain asset classes. Any investment in another investment company would be consistent with the fund's objective(s) and investment program.

The risks of owning another investment company are generally similar to the risks of investing directly in the securities in which that investment company invests. However, an investment company may not achieve its investment objective or execute its investment strategy effectively, which may adversely affect the fund's performance. In addition, because closed-end funds and exchange-traded funds trade on a secondary market, their shares may trade at a premium or discount to the actual net asset value of their portfolio securities, and their shares may have greater volatility if an active trading market does not exist.

As a shareholder of another investment company, the fund must pay its pro-rata share of that investment company's fees and expenses. The fund's investments in non-T. Rowe Price investment companies are subject to the limits that apply to investments in other funds under the Investment Company Act of 1940 or under any applicable exemptive order.

Investments in other investment companies could allow the fund to obtain the benefits of a more diversified portfolio than might otherwise be available through direct investments in a particular asset class, and will subject the fund to the risks associated with the particular asset class or asset classes in which an underlying fund invests. Examples of asset classes in which other mutual funds (including T. Rowe Price Funds) focus their investments include high yield bonds, inflation-linked securities, floating rate loans, international bonds, emerging market bonds, stocks of companies involved in activities related to real assets, stocks of companies that focus on a particular industry or sector, and emerging market stocks. If the fund invests in another T. Rowe Price Fund, the management fee paid by the fund will be reduced to ensure that the fund does not incur duplicate management fees as a result of its investment.

Exchange-Traded Notes

The fund may invest in exchange-traded notes (ETNs). ETNs are generally notes representing debt of an issuer, usually a financial institution. ETNs combine aspects of both bonds and ETFs. An ETN's returns are based on the performance of one or more underlying assets, reference rates or indexes, minus fees and expenses. Similar to ETFs, ETNs are listed on an exchange and traded in the secondary market. However, unlike an ETF, an ETN can be held until the ETN's maturity, at which time the issuer will pay a return linked to the performance of a reference asset, such as a specific asset, index or rate to which the ETN is linked minus

certain fees. Unlike regular bonds, ETNs do not make periodic interest payments, and principal is not protected.

The value of an ETN may be influenced by, among other things, time to maturity, levels of supply and demand for the ETN, volatility and lack of liquidity in underlying markets, changes in the applicable interest rates, the performance of the reference instrument, changes in the issuer's credit rating and economic, legal, political or geographic events that affect the reference instrument. An ETN that is tied to a reference asset may not replicate the performance of the reference asset. ETNs also incur certain expenses not incurred by their applicable reference asset. Some ETNs that use leverage can, at times, be relatively illiquid and, thus, they may be difficult to purchase or sell at a fair price. Levered ETNs are subject to the same risk as other instruments that use leverage in any form. While leverage allows for greater potential returns, the potential for loss is also greater. Finally, additional losses may be incurred if the investment loses value because, in addition to the money lost on the investment, the loan still needs to be repaid.

Because the return on an ETN is dependent on the issuer's ability or willingness to meet its obligations, the value of the ETN may change due to a change in the issuer's credit rating, despite there being no change in the underlying reference instrument. The market value of ETN shares may differ from the value of the reference instrument. This difference in price may be due to the fact that the supply and demand in the market for ETN shares at any point in time is not always identical to the supply and demand in the market for the assets underlying the reference asset that the ETN seeks to track.

There may be restrictions on the fund's right to redeem its investment in an ETN, which is generally meant to be held until maturity. The fund's decision to sell its ETN holdings may be limited by the unavailability or limited nature of a secondary market. The fund could lose some or all of the amount invested in an ETN.

Principal Risks

Some of the principal tools the adviser uses to try to reduce overall risk include intensive research when evaluating a company's prospects and limiting exposure to certain industries, asset classes, or investment styles when appropriate.

The fund's exposure to a variety of instruments exposes it to a variety of risks. Each of these is proportional to the percentage of assets the fund has in those investments.

The principal risks associated with the fund's principal investment strategies include the following:

Stock investing The fund's share price can fall because of weakness in the overall stock markets, a particular industry, or specific holdings. Stock markets as a whole can be volatile and decline for many reasons, such as adverse local, political, regulatory, or economic developments; changes in investor psychology; or heavy institutional selling at the same time by major institutional investors in the market, such as mutual funds, pension funds, and banks. The prospects for an industry or company may deteriorate because of a variety of factors,

including disappointing earnings or changes in the competitive environment. In addition, the adviser's assessment of companies whose stocks are held by the fund may prove incorrect, resulting in losses or poor performance, even in rising markets. In the event an issuer is liquidated or declares bankruptcy, the claims of owners of the issuer's bonds and preferred stock take precedence over the claims of those who own common stock.

Fixed income markets The market price of investments owned by the fund may go up or down, sometimes rapidly or unpredictably. The fund's investments may decline in value due to factors affecting the overall fixed income markets, or particular industries or sectors. The value of a holding may decline due to developments related to a particular issuer, but also due to general fixed income market conditions, including real or perceived adverse economic developments, such as changes in interest rates, credit quality, inflation, or currency rates, or generally adverse investor sentiment. The value of a holding may also decline due to factors that negatively affect a particular industry, such as labor shortages, increased production costs, or competitive conditions. The fund may experience heavy redemptions that could cause it to liquidate its assets at inopportune times or at a loss or depressed value.

Market conditions The value of investments held by the fund may decline, sometimes rapidly or unpredictably, due to factors affecting certain issuers, particular industries or sectors, or the overall markets. Rapid or unexpected changes in market conditions could cause the fund to liquidate its holdings at inopportune times or at a loss or depressed value. The value of a particular holding may decrease due to developments related to that issuer, but also due to general market conditions, including real or perceived economic developments such as changes in interest rates, credit quality, inflation, or currency rates, or generally adverse investor sentiment. The value of a holding may also decline due to factors that negatively affect a particular industry or sector, such as labor shortages, increased production costs, or competitive conditions. In addition, local, regional, or global events such as war, acts of terrorism, political and social unrest, regulatory changes, recessions, shifts in monetary or trade policies, natural or environmental disasters, and the spread of infectious diseases or other public health issues could have a significant negative impact on securities markets and the fund's investments. Unpredictable events such as natural disasters, pandemics, and widespread health crises, including the coronavirus pandemic and related governmental and public responses, may lead to unexpected suspensions or closures of securities exchanges, travel restrictions or quarantines, business disruptions and closures, inability to obtain raw materials, supplies and component parts, reduced or disrupted operations for the fund's service providers or issuers in which the fund invests, and an extended adverse impact on global market conditions. Government intervention in markets may impact interest rates, market volatility, and security pricing. The occurrence, reoccurrence, and uncertainty of widespread diseases and health crises could adversely affect the economies (including through changes in business activity and increased unemployment) and financial markets of specific countries or worldwide.

Leverage Engaging in short sales and investing in certain futures contracts, options and swaps and other derivative instruments will result in leverage. These instruments provide the economic effect of financial leverage by creating additional investment exposure to the

underlying instrument, as well as the potential for greater loss. If the fund obtains leverage through short sales or purchasing certain types of derivative instruments, the fund is exposed to the risk that losses may exceed the net assets of the fund. The net asset value of the fund while employing leverage can become more volatile and sensitive to market movements.

Short positions When the fund takes a short position with respect to a particular security, currency, asset class, or market, it will lose money if the security, currency, asset class, or market appreciates in value. In addition, short positions may potentially incur losses due to potential costs associated with establishing and maintaining the short positions. Losses could be significant. Further, even though the fund's short positions may be designed to hedge against the risk of losses or reduce volatility, these transactions also may limit any potential gain that might result should the value of a particular security, currency, asset class, or market increase.

Derivatives The funds use of derivatives will add financial leverage to the fund's portfolio. Adverse changes in the value or level of the underlying asset or index, which a fund may not directly own, can result in a loss to the fund substantially greater than the amount invested in the derivative itself. Certain derivatives have the potential for unlimited loss, regardless of the size of the initial investment. In general, derivatives are subject to the risk that interest rates, securities prices, and currency markets will not move in the direction that the adviser anticipates; that the prices of the instruments and underlying securities, interest rates, or currencies they are designed to reflect do not move together as expected; that a liquid secondary market is unavailable for a particular instrument, which would make it difficult to close out a particular position at the desired time; and that some of these instruments may have uncertain tax implications for the fund. Certain derivatives in which the fund invests, including return swaps, total return basket swaps, options, forward currency exchange contracts, and credit default swaps, are traded over-the counter, rather than on an exchange. Over-the-counter derivatives are subject to a heightened degree of credit and counterparty risk because over-the-counter markets are much less regulated than ordinary trading exchanges.

Unusual market conditions or the lack of a liquid market for particular derivatives may reduce the fund's returns, and such investments could lead to losses in excess of the fund's initial investment. Changes in regulations could significantly impact the fund's ability to invest in specific types of derivatives, which could limit the fund's ability to employ certain strategies that use derivatives. The SEC has adopted new regulations governing the use of derivatives by registered investment companies. It is expected that additional changes to the regulatory framework will occur, but the extent and impact of additional new regulations are not certain at this time.

Options Selling call options could diminish the fund's returns during periods of strong equity market performance, while selling put options could diminish the fund's returns during periods of weak equity market performance. When the fund purchases an option, it may lose the premium paid for the option if the market value of the reference asset or index decreases or remains the same (in the case of a call option) or increases or remains the same (in the case of a put option).

Swaps Swap agreements involve the risk that the party with whom the fund has entered into the swap will default on its obligation to pay the fund and the risk that the fund will not be able to meet its obligations to pay the other party to the agreement. Total return swaps are subject to credit risks (if the counterparty fails to meet its obligations) and market risk (if there is no liquid market for the agreement or unfavorable changes occur to the underlying asset). Credit default swaps expose the fund to the risk that anticipated changes in the creditworthiness of an issuer or the likelihood of a credit event will not be accurately predicted. If the fund buys a credit default swap and no credit event occurs, the fund may recover nothing if the swap is held through its termination date.

Forwards and futures contracts The fund's use of futures is subject to the risk that there may be an imperfect correlation between the change in market value of the instruments held by the fund and the price of the futures contract or option; that there may be a lack of a liquid secondary market for a futures contract and the resulting inability to close a futures contract when desired; that the fund may experience losses caused by unanticipated market movements, which are potentially unlimited; T. Rowe Price's inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; and that there is a possibility that the counterparty will default in the performance of its obligations. The fund's use of forward currency exchange contracts exposes the fund to the risk of losses due to the potential failure of counterparties to meet the terms of the agreements, as well as the risk that hedging foreign currency exposure back to the U.S. dollar will cause the fund to forgo the benefit otherwise available from an increase in the foreign currency.

Risk models and quantitative models Risk models and quantitative models. The fund's strategy relies on risk models and quantitative models that may be either externally sourced or developed by T. Rowe Price to analyze data and construct sets of investments and transactions. Risk models essentially provide risk forecasts and, as such, the actual realized risk could be materially different from the expected risk implied by the model. Quantitative models essentially rank securities based on certain metrics and, as such, the actual profitability and growth of an issuer could be materially different from forecasted growth implied by the quantitative metrics and other indicators of investment potential. Since portfolio positioning will have been informed by the risk estimates and quantitative metrics, the actual impact on the portfolio may be different (e.g., lower returns and/or greater experienced portfolio volatility) than expected by fund management. The use of predictive models, including risk models and quantitative models, subjects the fund to the possibility that any errors or deficiencies in the models will expose the fund to additional risk or underperformance. The risk and quantitative models also assume that certain historical statistical characteristics and relationships will continue. Since these models are constructed based on historical data, the success of relying on such models may depend heavily on the accuracy and reliability of the data and expected outcomes supplied by the models, and the expectation that securities possessing certain favorable characteristics according to the models will continue to demonstrate those same characteristics in the future.

Currency exposure A decline in the value of a foreign currency versus the U.S. dollar could reduce the dollar value of securities denominated in that foreign currency. The overall impact

on the fund's holdings can be significant, unpredictable, and long-lasting, depending on the currencies represented in the fund's portfolio, how each foreign currency appreciates or depreciates in relation to the U.S. dollar, and whether currency positions are hedged. Further, any attempts to hedge currency risk could be unsuccessful and it can be difficult to effectively hedge the currency risks of many emerging market countries.

International investing Investments outside the U.S. may lose value because of declining foreign currencies or adverse political or economic events overseas, among other things. Securities of non-U.S. issuers (including depositary receipts and other instruments that represent interests in a non-U.S. issuer) tend to be more volatile than U.S. securities and are subject to trading markets with lower overall liquidity, governmental interference, and regulatory and accounting standards and settlement practices that differ from the U.S. The fund could experience losses based solely on the weakness of foreign currencies in which the fund's holdings are denominated versus the U.S. dollar, and changes in the exchange rates between such currencies and the U.S. dollar. Risks can result from differing regulatory environments, less stringent investor protections, uncertain tax laws, and higher transaction costs compared with U.S. markets. Investments outside the U.S. could be subject to governmental actions such as capital or currency controls, nationalization of a company or industry, expropriation of assets, or imposition of high taxes.

A trading market may close for national holidays or without warning for extended time periods, preventing the fund from buying or selling securities in that market. Trading securities in which the fund invests may take place in various foreign markets on certain days when the fund is not open for business and does not calculate its net asset value. For example, the fund may invest in securities that trade in various foreign markets that are open on weekends. As the securities trade, their value may substantially change. As a result, the fund's net asset value may be significantly affected on days when shareholders cannot make transactions. In addition, market volatility may significantly limit the liquidity of securities of certain issuers in a particular country or geographic region, or of all companies in the country or region. The fund may be unable to liquidate its positions in such securities at any time, or at a favorable price, in order to meet the fund's obligations.

Emerging markets Investments in emerging markets are subject to the risk of abrupt and severe price declines. The economic and political structures of emerging market countries, in most cases, do not compare favorably with the U.S. or other developed countries in terms of wealth and stability, and their financial markets often lack liquidity. These economies are less developed, can be overly reliant on particular industries, and are more vulnerable to the ebb and flow of international trade, trade barriers, and other protectionist or retaliatory measures. Governments in many emerging market countries participate to a significant degree in their economies and securities markets. As a result, foreign investments may be restricted and subject to greater government control, including repatriation of sales proceeds. Emerging market securities exchanges are more likely to experience problems with the clearing and settling of trades, as well as the custody of holdings by local banks, agents, and depositories. In addition, the accounting standards in emerging market countries may be unreliable and could present an inaccurate picture of a company's finances. Some countries have histories of

instability and upheaval that could cause their governments to act in a detrimental or hostile manner toward private enterprise or foreign investment. Investments in countries or regions that have recently begun moving away from central planning and state-owned industries toward free markets should be regarded as speculative.

While some countries have made progress in economic growth, liberalization, fiscal discipline, and political and social stability, there is no assurance these trends will continue. Significant risks, such as war and terrorism, currently affect some emerging market countries. The fund's performance will likely be hurt by exposure to nations in the midst of hyperinflation, currency devaluation, trade disagreements, sudden political upheaval, or interventionist government policies. The volatility of emerging markets may be heightened by the actions (such as significant buying or selling) of a few major investors. For example, substantial increases or decreases in cash flows of mutual funds investing in these markets could significantly affect local securities prices and, therefore, could cause fund share prices to decline.

Commodities Exposure to the commodities markets may subject the fund to greater volatility than investments in traditional securities. The value of exchange-traded funds investing in commodities or commodity-linked derivative investments may be affected by changes in overall market movements, commodity index volatility, changes in interest rates, or factors affecting a particular industry or commodity, such as drought, floods, weather, embargoes, tariffs, and international economic, political, and regulatory developments.

Bank loans Bank loans often have contractual restrictions on resale. These restrictions can delay or impede the fund's ability to sell loans and may adversely affect the price that can be obtained. Loans and unlisted securities are typically less liquid than securities traded on national exchanges. The secondary market for loans may be subject to irregular trading activity and extended settlement periods, and the liquidity of bank loans can vary significantly over time. For example, if the credit quality of a bank loan unexpectedly declines significantly, secondary market trading in that floating rate loan can also decline. During periods of infrequent trading, valuing a bank loan can be more difficult and buying or selling a loan at an acceptable price may not be possible or may be delayed.

The terms of the bank loans held by the fund may require that the borrowing company maintain collateral to support payment of its obligations. However, the value of the collateral securing a bank loan can decline or be insufficient to meet the obligations of the company. In addition, collateral securing a loan may be found invalid, may be used to pay other outstanding obligations of the borrower, or may be difficult to liquidate. The fund's access to the collateral may be limited by bankruptcy, other insolvency laws, or by the type of loan the fund has purchased. For example, if the fund purchases a participation interest instead of an assignment, it would not have direct access to collateral of the borrower. As a result, a bank loan may not be fully collateralized and can decline significantly in value.

Interest rates The prices of bonds and other fixed income securities typically increase as interest rates fall and prices typically decrease as interest rates rise (bond prices and interest rates usually move in opposite directions). Prices fall because the bonds and notes in the fund's portfolio become less attractive to other investors when securities with higher yields become

available. Generally, securities with longer maturities or durations and funds with longer weighted average maturities or durations have greater interest rate risk. As a result, in a rising interest rate environment, the net asset value of a fund with a longer weighted average maturity or duration typically decreases at a faster rate than the net asset value of a fund with a shorter weighted average maturity or duration. Interest rates have recently been near historically low levels. Extremely low or negative interest rates may increase the fund's susceptibility to interest rate risk and reduce the fund's yield. In addition, recent and potential future changes in monetary policy made by central banks and/or governments are likely to affect the level of interest rates. The discontinuation and replacement of a benchmark rate such as LIBOR (an indicative measure of the average interest rate at which major global banks could borrow from one another) may have a significant impact on the financial markets and may adversely impact the fund's performance. As a result, rapid changes in interest rates may increase the fund's overall exposure to interest rate risk.

LIBOR Transition Many financial instruments use or may use a floating rate based on the London Interbank Offered Rate, or "LIBOR," which is the offered rate for short-term Eurodollar deposits between major international banks. On July 27, 2017, the Financial Conduct Authority announced a desire to phase out the use of LIBOR by the end of 2021 (although it is possible that publication of certain USD LIBOR settings may be extended to the end of June 2023). There remains uncertainty regarding the future utilization of LIBOR and the nature of any replacement rate. As such, the potential impact of a transition away from LIBOR on the fund or the financial instruments in which the fund invests cannot yet be determined. The elimination of LIBOR or changes to other reference rates or any other changes or reforms to the determination or supervision of reference rates could have an adverse impact on the market for, or value of, any securities or payments linked to those reference rates, which may adversely affect the fund's performance and/or net asset value. Furthermore, the risks associated with the expected discontinuation of LIBOR and transition may be exacerbated if the work necessary to effect an orderly transition to an alternative reference rate is not completed in a timely manner. Because the usefulness of LIBOR as a benchmark could deteriorate during the transition period, these effects could occur prior to the end of 2021.

Credit quality An issuer of a debt instrument held by the fund could default (fail to make scheduled interest or principal payments), potentially reducing the fund's income and share price. Credit risk is increased when portfolio holdings are downgraded or the perceived financial condition of an issuer deteriorates. Holdings with an investment-grade rating (AAA through BBB, or an equivalent rating) should have a relatively low risk of encountering financial problems and a relatively high probability of future payments. However, holdings rated BBB (or an equivalent rating) are more susceptible to adverse economic conditions than other investment-grade holdings and may have speculative characteristics. Holdings rated below investment grade should be regarded as speculative because their issuers may be more susceptible to financial setbacks and recession than more creditworthy issuers.

Junk investing Junk investing subjects the fund to heightened credit risk. Issuers of junk bonds and loans are not as strong financially as those with higher credit ratings, so the issuers and lenders are more vulnerable to financial setbacks and recession than more creditworthy

issuers, which may impair their ability to make interest and principal payments. As a result, below investment grade investments carry greater risks of default and erratic price swings due to real or perceived changes in the credit quality of the issuer or lender.

Because the credit quality of the issuer is lower, such investments are more sensitive to developments affecting the issuer's or lender's underlying fundamentals, such as changes in financial condition or a particular country's general economy. In addition, the entire below investment-grade bond and loan markets can experience sudden and sharp price swings due to a variety of factors, including changes in economic forecasts, stock market activity, large sustained sales by institutional investors, a high-profile default, or a change in the market's psychology. This type of volatility is usually associated more with stocks than bonds, but investors in lower-quality bonds and loans should also anticipate it. Since mutual funds can be a major source of demand in certain junk bond and loan markets, substantial cash flows into and out of these funds can affect prices. If, for example, a significant number of funds were to sell bonds or loans to meet shareholder redemptions, bond and loan prices and funds' share prices could fall more than underlying fundamentals might justify.

Any investments in distressed or defaulted instruments subject the fund to even greater credit risk than investments in other below investment-grade investments. Investments in obligations of restructured, distressed, and bankrupt issuers, including debt obligations that are already in default, generally trade significantly below par and may lack liquidity. Defaulted securities might be repaid only after lengthy bankruptcy proceedings, during which the issuer might not make any interest or other payments, and such proceedings may result in only partial recovery of principal or no recovery at all. Recovery could involve an exchange of the defaulted obligation for other debt instruments or equity securities of the issuer or its affiliates, each of which may in turn lack liquidity or be speculative and be valued by the fund at significantly less than its original purchase price. In addition, investments in distressed issuers may subject the fund to liability as a lender.

Exchange-traded funds The fund's purchase of exchange-traded funds results in the layering of expenses since the fund must pay its proportionate share of each exchange-traded fund's fees and expenses, which are in addition to the fees and expenses incurred directly by the fund. Unlike mutual funds that are continuously offered and priced once at the end of each business day, exchange-traded funds are continually traded on a securities exchange on an intra-day basis at prices that may be above or below the actual value of their underlying portfolios. As a result, an exchange-traded fund's shares may trade at a substantial premium or discount to the actual net asset value of its portfolio securities and the potential for reduced liquidity or lack of an active trading market could result in greater price volatility.

Liquidity The fund may not be able to meet requests to redeem shares issued by the fund without significant dilution of the remaining shareholders' interest in the fund. In addition, the fund may not be able to sell a holding in a timely manner at a desired price. Sectors of the bond market can experience sudden downturns in trading activity. During periods of reduced market liquidity, the spread between the price at which a security can be bought and the price at which it can be sold can widen, and the fund may not be able to sell a holding readily at a

price that reflects what the fund believes it should be worth. Securities with lower overall liquidity can also become more difficult to value. Liquidity risk may be the result of, among other things, the reduced number and capacity of traditional broker-dealers to make a market in fixed income securities or the lack of an active market. The potential for liquidity risk may be magnified by a rising interest rate environment or other circumstances where selling activity from fixed income investors may be higher than normal, potentially causing increased supply in the market.

Nondiversification Because the fund is nondiversified and thus can invest more of its assets in a smaller number of issuers, it is more exposed to the risks associated with an individual issuer than a fund that invests more broadly across many issuers. For example, poor performance by a single large holding of the fund would adversely affect the fund's performance more than if the fund were invested in a larger number of issuers.

Active management The investment adviser's judgments about the attractiveness, value, or potential appreciation of the fund's investments may prove to be incorrect. The fund could underperform other funds with a similar benchmark or similar investment program if the fund's investment selections or overall strategies fail to produce the intended results. Regulatory, tax, or other developments may affect the investment strategies available to a portfolio manager, which could adversely affect the ability to implement the fund's overall investment program and achieve the fund's investment objective(s).

Cybersecurity breaches The fund may be subject to operational and information security risks resulting from breaches in cybersecurity. Cybersecurity breaches may involve deliberate attacks and unauthorized access to the digital information systems (for example, through "hacking" or malicious software coding) used by the fund or its third-party service providers but may also result from outside attacks such as denial-of-service attacks, which are efforts to make network services unavailable to intended users. These breaches may, among other things, result in financial losses to the fund and its shareholders, cause the fund to lose proprietary information, disrupt business operations, or result in the unauthorized release of confidential information. Further, cybersecurity breaches involving the fund's third-party service providers, financial intermediaries, trading counterparties, or issuers in which the fund invests could subject the fund to many of the same risks associated with direct breaches.

Additional Strategies, Risks, and Investment Management Practices

In addition to the principal investment strategies and principal risks previously described, the fund may employ other investment strategies and may be subject to other risks, which include the following:

Illiquid Investments

Some of the fund's holdings may be considered illiquid because they are subject to legal or contractual restrictions on resale or because they cannot reasonably be expected to be sold or disposed of in current market conditions in seven calendar days or less without the sale or disposition significantly changing the market value of the investment. The determination of liquidity involves a variety of factors. Illiquid investments may include private placements that

are sold directly to a small number of investors, usually institutions. Unlike public offerings, such securities are not registered with the SEC. Although certain of these securities may be readily sold (for example, pursuant to Rule 144A under the Securities Act of 1933) and therefore deemed liquid, others may have resale restrictions and be considered illiquid. The sale of illiquid investments may involve substantial delays and additional costs, and the fund may only be able to sell such investments at prices substantially lower than what it believes they are worth. In addition, the fund's investments in illiquid investments may reduce the returns of the fund because it may be unable to sell such investments at an advantageous time, which could prevent the fund from taking advantage of other investment opportunities.

Reserve Position

A certain portion of the fund's assets may be held in reserves. The fund's reserve positions will primarily consist of: (1) shares of a T. Rowe Price internal money market fund or short-term bond fund (which do not charge any management fees and are not available for public purchase); (2) short-term, high-quality U.S. and non-U.S. dollar-denominated money market securities, including repurchase agreements; and (3) U.S. dollar or non-U.S. dollar currencies. In order to respond to adverse market, economic, or political conditions, or to provide flexibility in meeting redemptions, paying expenses, managing cash flows into the fund, and responding to periods of unusual market volatility, the fund may assume a temporary defensive position that is inconsistent with its principal investment objective(s) and/or strategies and may invest, without limitation, in reserves. If the fund has significant holdings in reserves, it could compromise its ability to achieve its objective(s). Non-U.S. dollar reserves are subject to currency risk.

Borrowing Money and Transferring Assets

The fund may borrow from banks, other persons, and other T. Rowe Price Funds for temporary or emergency purposes, to facilitate redemption requests, or for other purposes consistent with the fund's policies as set forth in this prospectus and the Statement of Additional Information. Such borrowings may be collateralized with the fund's assets, subject to certain restrictions.

Borrowings may not exceed 33¹/₃% of the fund's total assets. This limitation includes any borrowings for temporary or emergency purposes, applies at the time of the transaction, and continues to the extent required by the Investment Company Act of 1940.

Lending of Portfolio Securities

The fund may lend its securities to broker-dealers, other institutions, or other persons to earn additional income. Risks include the potential insolvency of the broker-dealer or other borrower that could result in delays in recovering securities and capital losses. Additionally, losses could result from the reinvestment of collateral received on loaned securities in investments that decline in value, default, or do not perform as well as expected. Cash collateral from securities lending is invested in the T. Rowe Price Short-Term Fund.

Meeting Redemption Requests

We expect that the fund will hold cash or cash equivalents to meet redemption requests. The fund may also use the proceeds from the sale of portfolio securities to meet redemption requests if consistent with the management of the fund. These redemption methods will be used regularly and may also be used in deteriorating or stressed market conditions. The fund reserves the right to pay redemption proceeds with securities from the fund's portfolio rather than in cash (redemptions in-kind), as described under "Large Redemptions." Redemptions in-kind are typically used to meet redemption requests that represent a large percentage of the fund's net assets in order to minimize the effect of large redemptions on the fund and its remaining shareholders. In general, any redemptions in-kind will represent a pro-rata distribution of the fund's securities, subject to certain limited exceptions. Redemptions in-kind may be used regularly in circumstances as described above (generally if the shareholder is able to accept securities in-kind) and may also be used in stressed market conditions.

The fund, along with other T. Rowe Price Funds, is a party to an interfund lending exemptive order received from the SEC that permits the T. Rowe Price Funds to borrow money from and/or lend money to other T. Rowe Price Funds to help the funds meet short-term redemptions and liquidity needs.

During periods of deteriorating or stressed market conditions, when an increased portion of the fund's portfolio may be composed of holdings with reduced liquidity or lengthy settlement periods, or during extraordinary or emergency circumstances, the fund may be more likely to pay redemption proceeds with cash obtained through interfund lending or short-term borrowing arrangements (if available) or by redeeming a large redemption request in-kind.

The Statement of Additional Information contains more detailed information about the fund and its investments, operations, and expenses. The fund's investments may be subject to further restrictions and risks described in the Statement of Additional Information.

PORTFOLIO TURNOVER

Turnover is an indication of frequency of trading. Each time the fund purchases or sells a security, it incurs a cost. This cost is reflected in the fund's net asset value but not in its operating expenses. The higher the turnover rate, the higher the transaction costs and the greater the impact on the fund's total return. Higher turnover can also increase the possibility of taxable capital gain distributions. The fund's portfolio turnover rates are shown in the Financial Highlights tables.

FINANCIAL HIGHLIGHTS

The Financial Highlights tables, which provide information about the financial history for each class that was in operation at the end of the prior fiscal year, are based on a single share outstanding throughout the periods shown. The tables are part of the fund's financial statements, which are included in its annual report and are incorporated by reference into the Statement of Additional Information (available upon request). The financial statements in the annual report were audited by the fund's independent registered public accounting firm, PricewaterhouseCoopers LLP.

Most T. Rowe Price Funds disclose their calendar quarter-end portfolio holdings on **troweprice.com** 15 calendar days after each quarter. At the discretion of the investment adviser, these holdings reports may exclude the issuer name and other information relating to a holding in order to protect the fund's interests and to prevent harm to the fund or its shareholders. In addition, most T. Rowe Price Funds disclose their 10 largest holdings, along with the percentage of the relevant fund's total assets that each of the 10 holdings represents, on **troweprice.com** on the seventh business day after each month-end. These holdings are listed in numerical order based on such percentages of the fund's assets. A description of T. Rowe Price's policies and procedures with respect to the disclosure of portfolio information is available in the Statement of Additional Information.

The following policies and procedures generally apply to Investor Class, I Class, Advisor Class, R Class, and Z Class accounts in the T. Rowe Price Funds. The front cover and Section 1 of this prospectus indicate which share classes are available for the fund.

INVESTING WITH T. ROWE PRICE

This section of the prospectus explains the basics of investing with T. Rowe Price and describes some of the different share classes that may be available. Certain share classes can be held directly with T. Rowe Price, while other share classes must typically be held through a financial intermediary, such as broker-dealers, banks, insurance companies, retirement plan recordkeepers, and registered investment advisers. The Z Class is only available to funds managed by T. Rowe Price and other advisory clients of T. Rowe Price or its affiliates that are subject to a contractual fee for investment management services.

AVAILABLE SHARE CLASSES

Each class of a fund's shares represents an interest in the same fund with the same investment program and investment policies. However, each class is designed for a different type of investor and has a different cost structure primarily due to shareholder services or distribution arrangements that may apply only to that class. For example, certain classes may make payments to financial intermediaries for various administrative services they provide (commonly referred to as administrative fee payments, or AFP) and/or make payments to certain financial intermediaries for distribution of the fund's shares (commonly referred to as 12b-1 fee payments). Determining the most appropriate share class depends on many factors, including how much you plan to invest, whether you are investing directly in the fund or through a financial intermediary, and whether you are investing on behalf of a person or an organization.

This section generally describes the differences between Investor Class, I Class, Advisor Class, R Class, and Z Class shares. This section does not describe the policies that apply to accounts in T. Rowe Price institutional funds and certain other types of funds. Policies for these other funds are described in their respective prospectuses, and all available share classes for the T. Rowe Price Funds are described more fully in the funds' Statement of Additional Information. While many T. Rowe Price Funds are offered in more than one share class, not all funds offer all of the share classes described in this section.

Investor Class

A T. Rowe Price Fund that does not include the term "institutional" or indicate a specific share class as part of its name is considered to be the Investor Class of that fund. The Investor Class is

available to individual investors, institutions, and a wide variety of other types of investors. The Investor Class may be purchased directly from T. Rowe Price or through a retirement plan or financial intermediary. The Investor Class does not impose sales charges and does not make any 12b-1 fee payments to financial intermediaries but may make administrative fee payments at an annual rate of up to 0.15% of the class' average daily net assets. In addition, you may also incur brokerage commissions and other charges when buying or selling Investor Class shares through a financial intermediary. For investors holding the Investor Class through the T. Rowe Price[®] ActivePlus Portfolios program, the terms and conditions of the program will be applicable.

I Class

The I Class may be purchased directly from T. Rowe Price or through a financial intermediary. The I Class does not impose sales charges and does not make any administrative fee payments or 12b-1 fee payments to financial intermediaries. However, you may incur brokerage commissions and other charges when buying or selling I Class shares through a financial intermediary.

The I Class requires a \$1 million initial investment minimum, although the minimum generally is waived for retirement plans, financial intermediaries, certain client accounts for which T. Rowe Price or its affiliate has discretionary investment authority, and certain other accounts. For investors eligible for the I Class through the T. Rowe Price[®] ActivePlus Portfolios program, the terms and conditions of the program will be applicable. Accounts that are not eligible for the I Class may be converted to the Investor Class following notice to the financial intermediary or investor.

Advisor Class

The Advisor Class is designed to be sold through various financial intermediaries, such as broker-dealers, banks, insurance companies, retirement plan recordkeepers, and financial advisers. The Advisor Class must be purchased through an eligible financial intermediary (except for certain retirement plans held directly with T. Rowe Price). The Advisor Class does not impose sales charges but may make 12b-1 fee payments at an annual rate of up to 0.25% of the class' average daily net assets and may also separately make administrative fee payments at an annual rate of up to 0.15% of the class' average daily net assets. You may also incur other fees or charges when buying or selling Advisor Class shares through a financial intermediary.

The Advisor Class requires an agreement between the financial intermediary and T. Rowe Price to be executed prior to investment. Purchases of Advisor Class shares for which the required agreement with T. Rowe Price has not been executed or that are not made through an eligible financial intermediary are subject to rejection or cancellation without prior notice to the financial intermediary or investor, and accounts that are no longer eligible for the Advisor Class (including any accounts that are no longer serviced by a financial intermediary or for which the financial intermediary does not accept or assess 12b-1 fee payments) may be converted to the Investor Class following notice to the financial intermediary or investor.

R Class

The R Class is designed to be sold through financial intermediaries for employer-sponsored defined contribution retirement plans and certain other retirement accounts. The R Class must be purchased through an eligible financial intermediary (except for certain retirement plans held directly with T. Rowe Price). The R Class does not impose sales charges but may make 12b-1 fee payments at an annual rate of up to 0.50% of the class' average daily net assets and may also separately make administrative fee payments at an annual rate of up to 0.15% of the class' average daily net assets. You may also incur other fees or charges when buying or selling R Class shares through a financial intermediary.

The R Class requires an agreement between the financial intermediary and T. Rowe Price to be executed prior to investment. Purchases of R Class shares for which the required agreement with T. Rowe Price has not been executed or that are not made through an eligible financial intermediary are subject to rejection or cancellation without prior notice to the financial intermediary or investor, and accounts that are no longer eligible for the R Class (including any accounts that are no longer serviced by a financial intermediary or for which the financial intermediary does not accept or assess 12b-1 fee payments) may be converted to the Investor Class or Advisor Class following notice to the financial intermediary or investor.

Z Class

The Z Class is only available to funds managed by T. Rowe Price and other advisory clients of T. Rowe Price or its affiliates that are subject to a contractual fee for investment management services. There is no minimum initial investment and no minimum for additional purchases. The Z Class does not impose sales charges and does not make any administrative fee payments or 12b-1 fee payments to financial intermediaries.

DISTRIBUTION AND SHAREHOLDER SERVICING FEES

Administrative Fee Payments (Investor Class, Advisor Class, and R Class)

Certain financial intermediaries perform recordkeeping and administrative services for their clients that would otherwise be performed by the funds' transfer agent. Investor Class, Advisor Class, and R Class shares may make administrative fee payments to retirement plan recordkeepers, broker-dealers, and other financial intermediaries (at an annual rate of up to 0.15% of the class' average daily net assets) for transfer agency, recordkeeping, and other administrative services that they provide on behalf of the funds. These administrative services may include maintaining account records for each customer; transmitting purchase and redemption orders; delivering shareholder confirmations, statements, and tax forms; and providing support to respond to customers' questions regarding their accounts. Except for funds that have an all-inclusive management fee, these separate administrative fee payments are reflected in the "Other expenses" line that appears in the table titled "Fees and Expenses of the Fund" in Section 1.

12b-1 Fee Payments (Advisor Class and R Class)

Mutual funds are permitted to adopt a 12b-1 plan to pay certain expenses associated with the distribution of the fund's shares out of the fund's assets. Each fund offering Advisor and/or R Class shares has adopted a 12b-1 plan under which those classes may make payments (for the Advisor Class, at an annual rate of up to 0.25% of the class' average daily net assets, and for the R Class, at an annual rate of up to 0.50% of the class' average daily net assets) to various financial intermediaries, such as broker-dealers, banks, insurance companies, retirement plan recordkeepers, and registered investment advisers, for distribution and/or shareholder servicing of the Advisor Class and R Class shares. The 12b-1 plans provide for the class to pay such fees to the fund's distributor and for the distributor to then pay such fees to the financial intermediaries that provide services for the class and/or make the class available to investors.

For the Advisor Class, distribution payments may include payments to financial intermediaries for making the Advisor Class shares available to their customers (for example, providing the fund with "shelf space" or inclusion on a "preferred list" or "supermarket" platform). For the R Class, distribution payments may include payments to financial intermediaries for making the R Class shares available as investment options to retirement plans and retirement plan participants, assisting plan sponsors in conducting searches for investment options, and providing ongoing monitoring of investment options.

Shareholder servicing payments under the plans may include payments to financial intermediaries for providing shareholder support services to existing shareholders of the Advisor Class and R Class. These payments may be more or less than the costs incurred by the financial intermediaries. Because the fees are paid from the Advisor Class or R Class net assets on an ongoing basis, they will increase the cost of your investment over time. In addition, payments of 12b-1 fees may influence your financial adviser's recommendation of the fund or of any particular share class of the fund. Payments of 12b-1 fees are reflected in the "Distribution and service (12b-1) fees" line that appears in the table titled "Fees and Expenses of the Fund" in Section 1.

Additional Compensation to Financial Intermediaries

In addition to the administrative fee payments made by the Investor Class, Advisor Class and R Class, and the 12b-1 payments made by the Advisor Class and R Class, T. Rowe Price or the fund's distributor will, at their own expense, provide compensation to certain financial intermediaries that have sold shares of or provide shareholder or other services to the T. Rowe Price Funds, commonly referred to as revenue sharing. These payments may be in the form of asset-based, transaction-based, or flat payments. These payments are used to compensate third parties for distribution and shareholder servicing activities, including sub-accounting, sub-transfer agency, or other services. Some of these payments may include expense reimbursements and meeting and marketing support payments (out of T. Rowe Price's or the fund's distributor's own resources and not as an expense of the funds) to financial intermediaries, such as broker-dealers, banks, insurance companies, retirement plan recordkeepers, and registered investment advisers, in connection with the sale, distribution,

marketing, and/or servicing of the T. Rowe Price Funds. The Statement of Additional Information provides more information about these payment arrangements.

The receipt of, or the prospect of receiving, these payments and expense reimbursements from T. Rowe Price or the fund's distributor may influence financial intermediaries, plan sponsors, and other third parties to offer or recommend T. Rowe Price Funds over other investment options for which an intermediary does not receive additional compensation (or receives lower levels of additional compensation). In addition, financial intermediaries that receive these payments and/or expense reimbursements may elevate the prominence of the T. Rowe Price Funds by, for example, placing the T. Rowe Price Funds on a list of preferred or recommended funds and/or provide preferential or enhanced opportunities to promote the T. Rowe Price Funds in various ways. Since these additional payments are not paid by a fund directly, these arrangements do not increase fund expenses and will not change the price that an investor pays for shares of the T. Rowe Price Funds or the amount that is invested in a T. Rowe Price Fund on behalf of an investor. You may ask your financial intermediary for more information about any payments they receive from T. Rowe Price or the fund's distributor.

Comparison of Fees

The following table summarizes the distribution and service (12b-1) fee and administrative fee arrangements applicable to each class.

Class	12b-1 Fee Payments	Administrative Fee Payments
Investor Class	None	Up to 0.15% per year
I Class	None	None
Advisor Class	Up to 0.25% per year	Up to 0.15% per year
R Class	Up to 0.50% per year	Up to 0.15% per year
Z Class	None	None

ACCOUNT SERVICE FEE

Investor Class

In an effort to help offset the disproportionately high costs incurred by the funds in connection with servicing lower-balance accounts that are held directly with the T. Rowe Price Funds' transfer agent, an annual \$20 account service fee (paid to T. Rowe Price Services, Inc., or one of its affiliates) is charged to certain Investor Class accounts with a balance below \$10,000. The determination of whether a fund account is subject to the account service fee is based on account balances and services selected for accounts as of the last business day of August of each calendar year. The fee may be charged to an account with a balance below \$10,000 for any reason, including market fluctuation and recent redemptions. The fee, which is automatically deducted from an account by redeeming fund shares, is typically charged to accounts in early September each calendar year. Such redemption may result in a taxable gain or loss to you.

The account service fee generally does not apply to fund accounts that are held through a financial intermediary, participant accounts in employer-sponsored retirement plans for which

T. Rowe Price Retirement Plan Services provides recordkeeping services, accounts held through the T. Rowe Price® ActivePlus Portfolios program, or money market funds that are used as a T. Rowe Price Brokerage sweep account. Regardless of a particular fund account's balance as of the last business day of August, the account service fee is automatically waived for accounts that satisfy any of the following conditions:

- Any accounts for which the shareholder has elected to receive electronic delivery of all of the following: account statements, transaction confirmations, prospectuses, and shareholder reports (paper copies of fund documents are available, free of charge, upon request, to any shareholder regardless of whether the shareholder has elected electronic delivery);
- Any accounts of a shareholder with at least \$50,000 in total assets with T. Rowe Price (for this purpose, total assets include investments through T. Rowe Price Brokerage and investments in T. Rowe Price Funds, except for those held through a retirement plan for which T. Rowe Price Retirement Plan Services provides recordkeeping services); or
- Any accounts of a shareholder who is a T. Rowe Price Select Client Services client—visit **troweprice.com** or call 1-800-332-6161 for more information.

T. Rowe Price reserves the right to authorize additional waivers for other types of accounts or to modify the conditions for assessment of the account service fee. Fund shares held in a T. Rowe Price IRA, Education Savings Account, or small business retirement plan account (including certain 403(b) plan accounts) are subject to the account service fee and may be subject to additional administrative fees when distributing all fund shares from such accounts.

POLICIES FOR OPENING AN ACCOUNT

Investor Class and I Class shares may be purchased directly from T. Rowe Price or through various financial intermediaries. Advisor Class and R Class shares must be purchased through a financial intermediary (except for certain retirement plans held directly with T. Rowe Price). If you are opening an account through an employer-sponsored retirement plan or other financial intermediary, you should contact the retirement plan or financial intermediary for information regarding its policies on opening an account, including the policies relating to purchasing, exchanging, and redeeming shares, and the applicable initial and subsequent investment minimums.

Tax Identification Number

Investors must provide T. Rowe Price with a valid Social Security number or taxpayer identification number on a signed new account form or Form W-9, and financial intermediaries must provide T. Rowe Price with their certified taxpayer identification number. Otherwise, federal law requires the funds to withhold a percentage of dividends, capital gain distributions, and redemptions and may subject you or the financial intermediary to an Internal Revenue Service fine. If this information is not received within 60 days of the account being established, the account may be redeemed at the fund's then-current net asset value.

Important Information Required to Open a New Account

Pursuant to federal law, all financial institutions must obtain, verify, and record information that identifies each person or entity that opens an account. This information is needed not only for the account owner and any other person who opens the account, but also for any person who has authority to act on behalf of the account.

When you open an account, you will be asked for the name, U.S. street address (post office boxes are not acceptable), date of birth, and Social Security number or taxpayer identification number for each account owner and person(s) opening an account on behalf of others, such as custodians, agents, trustees, or other authorized signers. When opening an entity account, you will be asked to identify and provide personal information for: (i) any individual who, either directly or indirectly, owns 25% or more of the equity interest of the entity and (ii) a single individual who controls, manages, or directs the entity. Corporate and other institutional accounts require documents showing the existence of the entity (such as articles of incorporation or partnership agreements) to open an account. Certain other fiduciary accounts (such as trusts or power of attorney arrangements) require documentation, which may include an original or certified copy of the trust agreement or power of attorney, to open an account.

T. Rowe Price will use this information to verify the identity of the person(s)/entity opening the account. An account cannot be opened until all of this information is received. If the identity of the account holder cannot be verified, T. Rowe Price is authorized to take any action permitted by law, including, but not limited to, restricting additional purchases, freezing the account, or involuntarily redeeming the shares in the account at the net asset value calculated the day the account is redeemed.

Institutional investors and financial intermediaries should call Financial Institution Services at 1-800-638-8790 for more information on these requirements, as well as to be assigned an account number and instructions for opening an account. Other investors should call Investor Services at 1-800-638-5660 for more information about these requirements.

The funds are generally available only to investors residing in the United States. In addition, nongovernment money market funds that operate as “retail money market funds” pursuant to Rule 2a-7 under the Investment Company Act of 1940 are required to limit their beneficial owners to natural persons. An investor in a retail money market fund is required to demonstrate eligibility (for example, by providing a valid Social Security number) before an account can be opened.

PRICING OF SHARES AND TRANSACTIONS

How and When Shares Are Priced

The trade date for your transaction request depends on the day and time that T. Rowe Price receives your request and will normally be executed using the next share price calculated after your order is received in correct form by T. Rowe Price or its agent (or by your financial

intermediary if it has the authority to accept transaction orders on behalf of the fund). The share price, also called the net asset value, for each share class of a fund is calculated as of the close of trading on the New York Stock Exchange (NYSE), which is normally 4 p.m. ET, on each day that the NYSE is open for business. Net asset values are not calculated for the funds on days when the NYSE is scheduled to be closed for trading (for example, weekends and certain U.S. national holidays). If the NYSE is unexpectedly closed due to weather or other extenuating circumstances on a day it would typically be open for business, or if the NYSE has an unscheduled early closing on a day it has opened for business, the funds reserve the right to treat such day as a business day and accept purchase and redemption orders and calculate their share price as of the normally scheduled close of regular trading on the NYSE for that day.

To calculate the net asset value, a fund's assets are valued and totaled, liabilities are subtracted, and each class' proportionate share of the balance, called net assets, is divided by the number of shares outstanding of that class. Market values are used to price portfolio holdings for which market quotations are readily available. Market values generally reflect the prices at which securities actually trade or represent prices that have been adjusted based on evaluations and information provided by the fund's pricing services. Investments in other mutual funds are valued at the closing net asset value per share of the mutual fund on the day of valuation. If a market value for a portfolio holding is not available or normal valuation procedures are deemed to be inappropriate, the fund will make a good faith effort to assign a fair value to the holding by taking into account various factors and methodologies that have been approved by the fund's Board. This value may differ from the value the fund receives upon sale of the securities.

Amortized cost is used to price securities held by money market funds and certain short-term debt securities held by other funds. The retail and government money market funds, which seek to maintain a stable net asset value of \$1.00, use the amortized cost method of valuation to calculate their net asset value. Amortized cost allows the money market funds to value a holding at the fund's acquisition cost with adjustments for any premiums or discounts and then round the net asset value per share to the nearest whole cent. The amortized cost method of valuation enables the money market funds to maintain a \$1.00 net asset value, but it may also result in periods during which the stated value of a security held by the funds differs from the market-based price the funds would receive if they sold that holding. The current market-based net asset value per share for each business day in the preceding six months is available for the retail and government money market funds through **troweprice.com**. These market-based net asset values are for informational purposes only and are not used to price transactions.

The funds use various pricing services to provide closing market prices, as well as information used to adjust those prices and to value most fixed income securities. A fund cannot predict how often it will use closing prices or how often it will adjust those prices. As a means of evaluating its fair value process, the fund routinely compares closing market prices, the next day's opening prices in the same markets, and adjusted prices.

Non-U.S. equity securities are valued on the basis of their most recent closing market prices at 4 p.m. ET, except under the following circumstances. Most foreign markets close before 4 p.m. ET. For example, the most recent closing prices for securities traded in certain Asian markets may be as much as 15 hours old at 4 p.m. ET. If a fund determines that developments between the close of a foreign market and the close of the NYSE will affect the value of some or all of the fund's securities, the fund will adjust the previous closing prices to reflect what it believes to be the fair value of the securities as of 4 p.m. ET. In deciding whether to make these adjustments, the fund reviews a variety of factors, including developments in foreign markets, the performance of U.S. securities markets, and the performance of instruments trading in U.S. markets that represent foreign securities and baskets of foreign securities.

A fund may also fair value certain securities or a group of securities in other situations—for example, when a particular foreign market is closed but the fund is open. For a fund that has investments in securities that are primarily listed on foreign exchanges that trade on weekends or other days when the fund does not price its shares, the fund's net asset value may change on days when shareholders will not be able to purchase or redeem the fund's shares. If an event occurs that affects the value of a security after the close of the market, such as a default of a commercial paper issuer or a significant move in short-term interest rates, a fund may make a price adjustment depending on the nature and significance of the event. The funds also evaluate a variety of factors when assigning fair values to private placements and other restricted securities. Other mutual funds may adjust the prices of their securities by different amounts or assign different fair values than the fair value that the fund assigns to the same security.

The various ways you can purchase, sell, and exchange shares are explained throughout this section. These procedures differ based on whether you hold your account directly with T. Rowe Price or through an employer-sponsored retirement plan or financial intermediary.

INVESTING DIRECTLY WITH T. ROWE PRICE

The following policies apply to accounts that are held directly with T. Rowe Price and not through a financial intermediary.

Options for Opening Your Account

If you own other T. Rowe Price Funds, you should consider registering any new account identically to your existing accounts so you can exchange shares among them easily (the name(s) of the account owner(s) and the account type must be identical).

For joint accounts or other types of accounts owned or controlled by more than one party, either owner/party has complete authority to act on behalf of all and give instructions concerning the account without notice to the other party. T. Rowe Price may, in its sole discretion, require written authorization from all owners/parties to act on the account for

certain transactions (for example, to transfer ownership). There are multiple ways to establish a new account directly with T. Rowe Price.

Online You can open a new Investor Class account online. (I Class accounts currently must be opened either by telephone or in writing.) Go to [troweprice.com/newaccount](https://www.troweprice.com/newaccount) to choose the type of account you wish to open.

You can exchange shares online from an existing account in one fund to open a new account in another fund. The new account will have the same registration as the account from which you are exchanging, and any services (other than systematic purchase and systematic distribution arrangements) that you have preauthorized will carry over from the existing account to the new account.

To open an account online for the first time or with a different account registration, you must be a U.S. citizen residing in the U.S. or a resident alien and not subject to Internal Revenue Service backup withholding. Additionally, you must provide consent to receive certain documents electronically. You will have the option of providing your bank account information, which will enable you to make electronic funds transfers to and from your bank account. To set up this banking service online, additional steps will be taken to verify your identity.

By Mail If you are sending a check, please make your check payable to T. Rowe Price Funds (otherwise it may be returned) and send the check, together with the applicable new account form, to the appropriate address. (Please refer to the appropriate address under “Contacting T. Rowe Price” later in this section to avoid a delay in opening your new account.) T. Rowe Price does not accept third-party checks for initial purchases; however, third-party checks are typically accepted for additional purchases to an existing account. In addition, T. Rowe Price does not accept purchases by cash, traveler’s checks, money orders, or credit card checks. For exchanges from an identically registered account, be sure to specify the fund(s) and account number(s) that you are exchanging out of and the fund(s) you wish to exchange into.

By Telephone Direct investors can call Shareholder Services at 1-800-225-5132 (institutional investors should call 1-800-638-8790) to exchange from an existing fund account to open a new identically registered account in another fund. You may also be eligible to open a new account by telephone and provide your bank account information in order to make an initial purchase. To set up the account and banking service by telephone, additional steps will be taken to verify your identity and the authenticity of your bank account. Although the account may be opened and the purchase made, services may not be established and an Internal Revenue Service penalty withholding may occur until we receive the necessary signed form to certify your Social Security number or taxpayer identification number.

How Your Trade Date Is Determined

If you invest directly with T. Rowe Price and your request to purchase, sell, or exchange shares is received by T. Rowe Price or its agent in correct form by the close of the NYSE (normally 4 p.m. ET), your transaction will be priced at that business day’s net asset value. If your request is received by T. Rowe Price or its agent in correct form after the close of the NYSE, your

transaction will be priced at the next business day's net asset value. Systematic transactions that are scheduled to occur on a date the NYSE is closed will normally be processed the next business day (except for certain retirement plan payroll deduction orders generated by T. Rowe Price where the orders are processed the day before the day the NYSE is closed).

Note: There may be times when you are unable to contact us by telephone or access your account online due to extreme market activity, the unavailability of the T. Rowe Price website, or other circumstances. Should this occur, your order must still be placed and received in correct form by T. Rowe Price prior to the time the NYSE closes to be priced at that business day's net asset value. The time at which transactions and shares are priced and the time until which orders are accepted may be changed in case of an emergency or if the NYSE closes at a time other than 4 p.m. ET. The funds reserve the right to not treat an unscheduled intraday disruption or closure in NYSE trading as a closure of the NYSE and still accept transactions and calculate their net asset value as of 4 p.m. ET.

Transaction Confirmations

T. Rowe Price sends immediate confirmations for most of your fund transactions. However, certain transactions, such as systematic purchases and systematic redemptions, dividend reinvestments, checkwriting redemptions from money market funds, and transactions in money market funds used as a brokerage sweep account, do not receive an immediate transaction confirmation but are reported on your account statement. Please review transaction confirmations and account statements as soon as you receive them, and promptly report any discrepancies to Shareholder Services.

Telephone and Online Account Transactions

You may access your accounts and conduct transactions involving Investor Class accounts using the telephone or the T. Rowe Price website at troweprice.com. Telephone conversations are recorded. You can only conduct transactions involving the I Class over the telephone or in writing.

Preventing Unauthorized Transactions

The T. Rowe Price Funds and their agents use reasonably designed procedures to verify that telephone, electronic, and other instructions are genuine. These procedures include, among other things, recording telephone calls; requiring personalized security codes or other information online and certain identifying information for telephone calls; requiring Medallion signature guarantees for certain transactions and account changes; and promptly sending confirmations of transactions and address changes. For transactions conducted online, we recommend the use of a secure internet browser.

T. Rowe Price Account Protection Program Shareholders who invest in the T. Rowe Price Funds directly are eligible for the Account Protection Program. The Account Protection Program restores eligible losses due to unauthorized or fraudulent activity, provided that you follow all security best practices when you access and maintain your account(s). T. Rowe Price reserves the right to modify or withdraw the Account Protection Program at any time. The Account Protection Program security best practices and additional information may be

accessed online at <https://www.troweprice.com/personal-investing/help/policies-and-security/account-protection-program.html>.

If our verification procedures are followed, and the losses are not eligible to be restored under the Account Protection Program, the funds and their agents are not liable for any losses that may occur from acting on unauthorized instructions.

If you suspect any unauthorized account activity, notice errors or discrepancies in your T. Rowe Price account, or are not receiving your T. Rowe Price account statements, please contact T. Rowe Price immediately.

Trusted Contacts Investors who hold shares of a T. Rowe Price Fund directly or through a T. Rowe Price Brokerage account have the option to add one or more trusted contacts to their brokerage and mutual fund accounts. Trusted contacts are intended to be a resource to help protect client assets. Any individuals designated as a trusted contact will be authorized to serve as a primary contact if T. Rowe Price has questions or concerns related to potentially fraudulent account activity, suspected financial exploitation, or to confirm your contact information if we are unable to reach you (but are not authorized to act on your account). For more information or to add trusted contacts to your account, visit [troweprice.com](https://www.troweprice.com) or call 1-800-225-5132.

If you are age 65 or older, or if you are age 18 or older and we have reason to believe you have a mental or physical impairment that renders you unable to protect your own interest, we may place a temporary hold on the disbursement of redemption proceeds from your account in an effort to protect you if we reasonably believe that you have been or will be the victim of actual or attempted financial exploitation. You will receive notice of this temporary delay, and it will be for no more than 15 business days while we conduct an internal review of the suspected financial exploitation (including contacting your trusted contact if one is on file). We may delay an additional 10 business days if T. Rowe Price reasonably believes that actual or attempted financial exploitation has occurred or will occur. At the expiration of the hold time, if we have not confirmed that exploitation has occurred, the proceeds will be released to you. Depending upon the state in which you reside, we may be required to report to the authorities suspected elder or vulnerable adult exploitation.

Purchasing Shares

Shares may be purchased in a variety of ways.

By Check Please make your check payable to the T. Rowe Price Funds. Include a new account form if establishing a new account, and include either a fund investment slip or a letter indicating the fund and your account number if adding to an existing account. Your transaction will receive the share price for the business day that the request is received by T. Rowe Price or its agent prior to the close of the NYSE (not the day the request is received at the post office box).

By Electronic Transfer Shares may be purchased using the Automated Clearing House system if you have established the service on your account, which allows T. Rowe Price to

request payment for your shares directly from your bank account or other financial institution account. You may also arrange for a wire to be sent to T. Rowe Price (wire transfer instructions can be found at [troweprice.com/wireinstructions](https://www.troweprice.com/wireinstructions) or by calling Shareholder Services). T. Rowe Price must receive the wire by the close of the NYSE to receive that day's share price. There is no assurance that you will receive the share price for the same day you initiated the wire from your financial institution.

By Exchange You may purchase shares of a fund using the proceeds from the redemption of shares from another fund. The redemption and purchase will receive the same trade date, and if you are establishing a new account, it will have the same registration as the account from which you are exchanging. The purchase must still generally meet the applicable minimum investment requirement.

Systematic Purchases (Automatic Asset Builder) You can instruct T. Rowe Price to automatically transfer money from your account at your bank or other financial institution at least once per month, or you can instruct your employer to send all or a portion of your paycheck to the fund or funds that you designate. Each systematic purchase must be at least \$100 per fund account to be eligible for the Automatic Asset Builder service. To automatically transfer money to your account from a bank account or through payroll deductions, complete the appropriate section of the new account form when opening a new account or complete an Account Services Form to add the service to an existing account. Prior to establishing payroll deductions, you must set up the service with T. Rowe Price so that the appropriate instructions can be provided to your employer.

Initial Investment Minimums

Investor Class accounts, other than the Retirement Income 2020 Fund and Summit Funds, require a \$2,500 minimum initial investment (\$1,000 minimum initial investment for IRAs; certain small business retirement accounts; and custodial accounts for minors, known as Uniform Gifts to Minors Act or Uniform Transfers to Minors Act accounts). The Retirement Income 2020 Fund and Summit Funds require a \$25,000 minimum initial investment. I Class accounts require a \$1 million minimum initial investment, although the minimum generally is waived for certain types of accounts. If you request the I Class of a particular fund when you open a new account but the investment amount does not meet the applicable minimum, the purchase will be automatically invested in the Investor Class of the same fund.

Additional Investment Minimums

Investor Class accounts, other than Summit Funds, require a \$100 minimum for additional purchases, including those made through Automatic Asset Builder. Summit Funds require a \$100 minimum for additional purchases through Automatic Asset Builder and a \$1,000 minimum for all other additional purchases. I Class accounts require a \$100 minimum for additional purchases through Automatic Asset Builder but do not require a minimum amount for other additional purchases.

Exchanging and Redeeming Shares

Exchanges You can move money from one account to an existing, identically registered account or open a new identically registered account. For taxable accounts, an exchange from one fund to another will be reported to the Internal Revenue Service as a sale for tax purposes. (Institutional investors are restricted from exchanging into a fund that operates as a retail money market fund.) You can set up systematic exchanges so that money is automatically moved from one fund account to another on a regular basis.

Receiving Redemption Proceeds Redemption proceeds can be mailed to your account address by check or sent electronically to your bank account by Automated Clearing House transfer or bank wire. You can set up systematic redemptions and have the proceeds automatically sent via check or Automated Clearing House on a regular basis. If your request is received in correct form by T. Rowe Price or its agent on a business day prior to the close of the NYSE, proceeds are usually sent on the next business day. However, if you request a redemption from a money market fund on a business day prior to noon ET and request to have proceeds sent via bank wire, proceeds are normally sent later that same day.

Proceeds sent by Automated Clearing House transfer are usually credited to your account the second business day after the sale, and there are typically no fees associated with such payments. Proceeds sent by bank wire are usually credited to your account the next business day after the sale (except for wire redemptions from money market funds received prior to noon ET). A \$5 fee will be charged for an outgoing wire of less than \$5,000, in addition to any fees your financial institution may charge for an incoming wire.

If for some reason your request to exchange or redeem shares cannot be processed because it is not received in correct form, we will attempt to contact you as soon as administratively possible.

If you request to redeem a specific dollar amount and the market value of your account is less than the amount of your request and we are unable to contact you, your redemption will not be processed and you must submit a new redemption request in correct form.

If you change your address on an account, proceeds may not be mailed to the new address for 15 calendar days after the address change, unless we receive a letter of instruction with a Medallion signature guarantee.

Please note that large purchase and redemption requests initiated through the Automated Clearing House may be rejected, and in such instances, the transaction must be placed by calling Shareholder Services.

Checkwriting You may write an unlimited number of free checks on any money market fund and certain bond funds, with a minimum of \$500 per check. Keep in mind, however, that a check results in a sale of fund shares; a check written on a bond fund will create a taxable event that must be reported by T. Rowe Price to the Internal Revenue Service as a redemption.

Converting to Another Share Class

You may convert from one share class of a fund to another share class of the same fund (which may have a higher expense ratio). Although the conversion has no effect on the dollar value of your investment in the fund, the number of shares owned after the conversion may be greater or less than the number of shares owned before the conversion, depending on the net asset values of the two share classes. A conversion between share classes of the same fund is a nontaxable event. The new account will have the same registration as the account from which you are converting.

T. Rowe Price may conduct periodic reviews of account balances. If your account balance in a fund exceeds the minimum amount required for the I Class, T. Rowe Price may, but is not required to, automatically convert your Investor Class shares to I Class shares with advance notice. However, if T. Rowe Price has investment discretion, T. Rowe Price may convert your shares without advance notice.

Maintaining Your Account Balance

Investor Class Due to the relatively high cost to a fund of maintaining small accounts, we ask that you maintain an account balance of at least \$1,000 (\$10,000 for Summit Funds). If, for any reason, your balance is below this amount for three months or longer, we have the right to redeem your account at the then-current net asset value after giving you 60 days to increase your balance.

I Class To keep operating expenses lower, we ask that you maintain an account balance of at least \$1 million. If your investment falls below \$1 million (even if due to market depreciation), we have the right to redeem your account at the then-current net asset value after giving you 60 days to increase your balance or convert your account to a different share class in the same fund (if available) with a higher expense ratio with advance notice. However, if T. Rowe Price has investment discretion, T. Rowe Price may convert your shares without advance notice.

The redemption of your account could result in a taxable gain or loss.

Investors holding the fund through the T. Rowe Price[®] ActivePlus Portfolios program will be subject to the minimum account balance requirements of the program, which may differ from the minimum account balance requirements listed above.

INVESTING THROUGH A FINANCIAL INTERMEDIARY

The following policies apply to accounts that are held through a financial intermediary.

Accounts in Investor Class and I Class shares are not required to be held through a financial intermediary, but accounts in Advisor Class and R Class shares must be held through an eligible financial intermediary (except for certain retirement plans held directly with T. Rowe Price). It is important that you contact your retirement plan or financial intermediary to determine the policies, procedures, and transaction deadlines that apply to your account. The

financial intermediary may charge a fee, such as transaction fees or brokerage commissions, for its services.

Opening an Account

The financial intermediary must provide T. Rowe Price with its certified taxpayer identification number. Financial intermediaries should call Financial Institution Services for an account number and wire transfer instructions. In order to obtain an account number, the financial intermediary must supply the name, taxpayer identification number, and business street address for the account. (Please refer to “Contacting T. Rowe Price” later in this section for the appropriate telephone number and mailing address.) Financial intermediaries must also enter into a separate agreement with the fund or its agent.

How the Trade Date Is Determined

If you invest through a financial intermediary and your transaction request is received by T. Rowe Price or its agent in correct form by the close of the NYSE, your transaction will be priced at that business day’s net asset value. If your request is received by T. Rowe Price or its agent in correct form after the close of the NYSE, your transaction will be priced at the next business day’s net asset value unless the fund has an agreement with your financial intermediary for orders to be priced at the net asset value next computed after receipt by the financial intermediary.

The funds have authorized certain financial intermediaries or their designees to accept orders to buy or sell fund shares on their behalf. When authorized financial intermediaries receive an order in correct form, the order is considered as being placed with the fund and shares will be bought or sold at the net asset value next calculated after the order is received by the authorized financial intermediary. The financial intermediary must transmit the order to T. Rowe Price and pay for such shares in accordance with the agreement with T. Rowe Price or the order may be canceled and the financial intermediary could be held liable for the losses. If the fund does not have such an agreement in place with your financial intermediary, T. Rowe Price or its agent must receive the request in correct form from your financial intermediary by the close of the NYSE in order for your transaction to be priced at that business day’s net asset value.

Note: The time at which transactions and shares are priced and the time until which orders are accepted by the fund or a financial intermediary may be changed in case of an emergency or if the NYSE closes at a time other than 4 p.m. ET. The funds reserve the right to not treat an unscheduled intraday disruption or closure in NYSE trading as a closure of the NYSE and still accept transactions and calculate their net asset value as of 4 p.m. ET. Should this occur, your order must still be placed and received in correct form by T. Rowe Price (or by the financial intermediary in accordance with its agreement with T. Rowe Price) prior to the time the NYSE closes to be priced at that business day’s net asset value.

Purchasing Shares

All initial and subsequent investments by financial intermediaries should be made by bank wire or electronic payment. There is no assurance that the share price for the purchase will be the same day the wire was initiated. Purchases by financial intermediaries are typically initiated

through the National Securities Clearing Corporation or by calling Financial Institution Services.

Investment Minimums

You should check with your financial intermediary to determine what minimum applies to your initial and additional investments.

The Retirement Income 2020 Fund and Summit Funds require a \$25,000 minimum initial investment, and other funds generally require a \$2,500 minimum initial investment, although the minimum is generally waived or modified for any retirement plans and financial intermediaries establishing accounts in the Investor Class, Advisor Class, or R Class. I Class accounts require a \$1 million minimum initial investment, although the minimum generally is waived for certain types of accounts.

Investments through a financial intermediary generally do not require a minimum amount for additional purchases.

Redeeming Shares

Unless otherwise indicated, redemption proceeds will be sent via bank wire to the financial intermediary's designated bank. Redemptions by financial intermediaries are typically initiated through the National Securities Clearing Corporation or by calling Financial Institution Services. Normally, the fund transmits proceeds to financial intermediaries for redemption orders received in correct form on either the next business day or second business day after receipt of the order, depending on the arrangement with the financial intermediary. Proceeds for redemption orders received prior to 12:00 p.m. ET for a money market fund may be sent via wire the same business day. You must contact your financial intermediary about procedures for receiving your redemption proceeds.

Please note that certain purchase and redemption requests initiated through the National Securities Clearing Corporation may be rejected, and in such instances, the transaction must be placed by contacting Financial Institution Services.

GENERAL POLICIES RELATING TO TRANSACTIONS

The following policies and requirements apply generally to accounts in the T. Rowe Price Funds, regardless of whether the account is held directly or indirectly with T. Rowe Price.

The funds generally do not accept orders that request a particular day or price for a transaction or any other special conditions. However, when authorized by the fund, certain institutions, financial intermediaries, or retirement plans purchasing fund shares directly with T. Rowe Price may place a purchase order unaccompanied by payment. Payment for these shares must be received by the time designated by the fund (not to exceed the period established for settlement under applicable regulations). If payment is not received by this time, the order may

be canceled. The institution, financial intermediary, or retirement plan is responsible for any costs or losses incurred by the fund or T. Rowe Price if payment is delayed or not received.

U.S. Dollars All purchases must be paid for in U.S. dollars; checks must be drawn on U.S. banks. In addition, we request that you give us at least three business days' notice for any purchase of \$5 million or more.

Nonpayment If a check or Automated Clearing House transfer does not clear or payment for an order is not received in a timely manner, your purchase may be canceled. You (or the financial intermediary) may be responsible for any losses or expenses incurred by the fund or its transfer agent, and the fund can redeem shares in your account or another identically registered T. Rowe Price account as reimbursement. The funds and their agents have the right to reject or cancel any purchase, exchange, or redemption due to nonpayment.

Retail Money Market Funds The retail money market funds have implemented policies and procedures designed to limit purchases to accounts beneficially owned by a natural person. Purchases of a retail money market fund may be rejected from an investor who has not demonstrated sufficient eligibility to purchase shares of the fund or from a financial intermediary that has not demonstrated adequate procedures to limit investments to natural persons. In addition, purchases may be prohibited or subject to certain conditions during periods where a liquidity fee or redemption gate is in effect.

Liquidity Fees and Redemption Gates—Retail Money Market Funds

A money market fund that operates as a retail money market fund pursuant to Rule 2a-7 under the Investment Company Act of 1940 has the ability to impose liquidity fees of up to 2% of the value of the shares redeemed if the fund's weekly liquid assets fall below certain thresholds, as specified in Rule 2a-7. A retail money market fund also has the ability to impose a redemption gate, which enables the fund to temporarily suspend redemptions for up to 10 days within a 90-day period if the fund's weekly liquid assets fall below a certain threshold, as specified in Rule 2a-7. A money market fund's Board has ultimate discretion to determine whether or not a liquidity fee or redemption gate would be in the best interests of the fund's shareholders and should be imposed.

A money market fund that operates as a government money market fund pursuant to Rule 2a-7 is not required to impose a liquidity fee or redemption gate upon the sale of your shares. The Boards of the T. Rowe Price money market funds that operate as government money market funds have determined that the funds do not currently intend to impose liquidity fees and redemption gates. However, the Board of a T. Rowe Price government money market fund reserves the right to impose liquidity fees and redemption gates in the future, at which point shareholders would be provided with at least 60 days' notice prior to such a change.

If a liquidity fee is in place, all exchanges out of the fund will be subject to the liquidity fee, and if a redemption gate is in place, all exchanges out of the fund will be suspended. When a liquidity fee or redemption gate is in place, the fund may elect to not permit the purchase of

shares or to subject the purchase of shares to certain conditions, which may include affirmation of the purchaser's knowledge that a liquidity fee or a redemption gate is in effect.

Omnibus Accounts If your shares are held through a financial intermediary, T. Rowe Price may rely on the financial intermediary to assess any applicable liquidity fees or impose redemption gates on underlying shareholder accounts. In certain situations, T. Rowe Price enters into agreements with financial intermediaries maintaining omnibus accounts that require the financial intermediary to assess liquidity fees or redemption gates. There are no assurances that T. Rowe Price will be successful in ensuring that all financial intermediaries will properly assess the fees.

Please refer to Sections 1 and 2 of the retail money market fund prospectuses for more information regarding liquidity fees and redemption gates.

Large Redemptions

Large redemptions (for example, \$250,000 or more) can adversely affect a portfolio manager's ability to implement a fund's investment strategy by causing the premature sale of securities that would otherwise be held longer. Therefore, the fund reserves the right (without prior notice) to redeem in-kind. In general, any redemptions in-kind will represent a pro-rata distribution of a fund's securities, subject to certain limited exceptions. The redeeming shareholder will be responsible for disposing of the securities, and the shareholder will be subject to the risks that the value of the securities could decline prior to their sale, the securities could be difficult to sell, and brokerage fees could be incurred. If you continue to hold the securities, you may be subject to any ownership restrictions imposed by the issuers. For example, real estate investment trusts (REITs) often impose ownership restrictions on their equity securities. In addition, we request that you give us at least three business days' notice for any redemption of \$5 million or more.

Delays in Sending Redemption Proceeds

The T. Rowe Price Funds typically expect that redemption requests will be paid out to redeeming shareholders by the business day following the receipt of a redemption request that is in correct form, regardless of the method the fund uses to make such payment (for example, check, wire, or Automated Clearing House transfer). Checks are typically mailed on the business day after the redemption, proceeds sent by wire are typically credited to your financial institution the business day after the redemption, and proceeds sent by Automated Clearing House are typically credited to your financial institution on the second business day after the redemption. However, under certain circumstances, and when deemed to be in a fund's best interests, proceeds may not be sent for up to seven calendar days after receipt of a valid redemption order (for example, during periods of deteriorating or stressed market conditions or during extraordinary or emergency circumstances).

In addition, if shares are sold that were just purchased and paid for by check or Automated Clearing House transfer, the fund will process your redemption but will generally delay sending the proceeds for up to seven calendar days to allow the check or Automated Clearing House transfer to clear. If, during the clearing period, we receive a check drawn against your

newly purchased shares, it will be returned and marked “uncollected.” (The seven-day hold does not apply to purchases paid for by bank wire or automatic purchases through payroll deduction.)

The Board of a retail money market fund may temporarily suspend redemptions from the fund for up to 10 business days during any 90-day period (i.e., a “redemption gate”) and elect to temporarily suspend redemptions for up to 10 business days in a 90-day period if the fund’s weekly liquid assets fall below 30% of its total assets and the fund’s Board determines that imposing a redemption gate is in the fund’s best interests. In addition, under certain limited circumstances, the Board of a money market fund may elect to permanently suspend redemptions in order to facilitate an orderly liquidation of the fund (subject to any additional liquidation requirements).

Involuntary Redemptions and Share Class Conversions

Since nongovernment money market funds that operate as retail money market funds are required to limit their beneficial owners to natural persons, shares held directly by an investor or through a financial intermediary in these funds that are not eligible to invest in a retail money market fund are subject to involuntary redemption at any time without prior notice.

Shares held by any investors or financial intermediaries that are no longer eligible to invest in the I Class or who fail to meet or maintain their account(s) at the investment minimum are subject to involuntary redemption or conversion to the Investor Class of the same fund (which may have a higher expense ratio). Investments in Advisor Class shares that are no longer held through an eligible financial intermediary may be automatically converted by T. Rowe Price to the Investor Class of the same fund following notice to the financial intermediary or shareholder. Investments in R Class shares that are no longer held on behalf of an employer-sponsored defined contribution retirement plan or other eligible R Class account or that are not held through an eligible financial intermediary may be automatically converted by T. Rowe Price to the Investor Class or Advisor Class of the same fund following notice to the financial intermediary or shareholder.

Excessive and Short-Term Trading Policy

Excessive transactions and short-term trading can be harmful to fund shareholders in various ways, such as disrupting a fund’s portfolio management strategies, increasing a fund’s trading and other costs, and negatively affecting its performance. Short-term traders in funds that invest in foreign securities may seek to take advantage of developments overseas that could lead to an anticipated difference between the price of the funds’ shares and price movements in foreign markets. While there is no assurance that T. Rowe Price can prevent all excessive and short-term trading, the Boards of the T. Rowe Price Funds have adopted the following trading limits that are designed to deter such activity and protect the funds’ shareholders. The funds may revise their trading limits and procedures at any time as the Boards deem necessary or appropriate to better detect short-term trading that may adversely affect the funds, to comply with applicable regulatory requirements, or to impose additional or alternative restrictions.

Subject to certain exceptions, each T. Rowe Price Fund restricts a shareholder's purchases (including through exchanges) into a fund account for a period of 30 calendar days after the shareholder has redeemed or exchanged out of that same fund account (the "30-Day Purchase Block"). The calendar day after the date of redemption is considered Day 1 for purposes of computing the period before another purchase may be made.

General Exceptions As of the date of this prospectus, the following types of transactions generally are not subject to the funds' excessive and short-term trading policy:

- Shares purchased or redeemed in money market funds and ultra short-term bond funds;
- Shares purchased or redeemed through a systematic purchase or withdrawal plan;
- Checkwriting redemptions from bond funds and money market funds;
- Shares purchased through the reinvestment of dividends or capital gain distributions;
- Shares redeemed automatically by a fund to pay fund fees or shareholder account fees;
- Transfers and changes of account registration within the same fund;
- Shares purchased by asset transfer or direct rollover;
- Shares purchased or redeemed through IRA conversions and recharacterizations;
- Shares redeemed to return an excess contribution from a retirement account;
- Transactions in Section 529 college savings plans;
- Certain transactions in defined benefit and nonqualified plans, subject to prior approval by T. Rowe Price;
- Shares converted from one share class to another share class in the same fund;
- Shares of T. Rowe Price Funds that are purchased by another T. Rowe Price Fund, including shares purchased by T. Rowe Price fund-of-funds products, and shares purchased by discretionary accounts managed by T. Rowe Price or one of its affiliates (please note that shareholders of the investing T. Rowe Price Fund are still subject to the policy);
- Transactions initiated by the trustee or adviser to a donor-advised charitable gift fund as approved by T. Rowe Price; and
- Transactions having a value of \$5,000 or less (retirement plans, including those for which T. Rowe Price serves as recordkeeper, and other financial intermediaries may apply the excessive and short-term trading policy to transactions of any amount).

Transactions in certain rebalancing, asset allocation, wrap, and other advisory programs (including the T. Rowe Price[®] ActivePlus Portfolios program), as well as non-T. Rowe Price fund-of-funds products, may also be exempt from the 30-Day Purchase Block, subject to prior written approval by T. Rowe Price.

In addition to restricting transactions in accordance with the 30-Day Purchase Block, T. Rowe Price may, in its discretion, reject (or instruct a financial intermediary to reject) any purchase or exchange into a fund from a person (which includes individuals and entities) whose trading activity could disrupt the management of the fund or dilute the value of the fund's shares, including trading by persons acting collectively (for example, following the advice of a newsletter). Such persons may be barred, without prior notice, from further purchases of T. Rowe Price Funds for a period longer than 30 calendar days, or permanently.

Financial Intermediary and Retirement Plan Accounts If you invest in T. Rowe Price Funds through a financial intermediary, including a retirement plan, you should review the financial intermediary's or retirement plan's materials carefully or consult with the financial intermediary or plan sponsor directly to determine the trading policy that will apply to your trades in the T. Rowe Price Funds as well as any other rules or conditions on transactions that may apply. If T. Rowe Price is unable to identify a transaction placed through a financial intermediary as exempt from the excessive trading policy, the 30-Day Purchase Block may apply.

Financial intermediaries, including retirement plans, may maintain their underlying accounts directly with the fund, although they often establish an omnibus account (one account with the fund that represents multiple underlying shareholder accounts) on behalf of their customers. When financial intermediaries establish omnibus accounts in the T. Rowe Price Funds, T. Rowe Price is not able to monitor the trading activity of the underlying shareholders. However, T. Rowe Price monitors aggregate trading activity at the financial intermediary (omnibus account) level in an attempt to identify activity that indicates potential excessive or short-term trading. If it detects such trading activity, T. Rowe Price may contact the financial intermediary to request personal identifying information and transaction histories for some or all underlying shareholders (including plan participants, if applicable) pursuant to a written agreement that T. Rowe Price has entered into with each financial intermediary. Any nonpublic personal information provided to the fund (for example, a shareholder's taxpayer identification number or transaction records) is subject to the fund's privacy policy. If T. Rowe Price believes that excessive or short-term trading has occurred and there is no exception for such trades under the funds' Excessive and Short-Term Trading Policy as previously described, it will instruct the financial intermediary to impose restrictions to discourage such practices and take appropriate action with respect to the underlying shareholder, including restricting purchases for 30 calendar days or longer. Each financial intermediary has agreed to execute such instructions pursuant to a written agreement. There is no assurance that T. Rowe Price will be able to properly enforce its Excessive and Short-Term Trading policy for omnibus accounts. Because T. Rowe Price generally relies on financial intermediaries to provide information and impose restrictions for omnibus accounts, its ability to monitor and deter excessive trading will be dependent upon the financial intermediaries' timely performance of their responsibilities.

For shares that are held in a retirement plan, generally the 30-Day Purchase Block applies only to shares redeemed by a participant-directed exchange to another fund. However, the 30-Day Purchase Block may apply to transactions other than exchanges depending on how shares of the plan are held at T. Rowe Price or the excessive trading policy applied by your plan's recordkeeper.

T. Rowe Price may allow a financial intermediary, including a retirement plan, to maintain restrictions on trading in the T. Rowe Price Funds that differ from the 30-Day Purchase Block. An alternative excessive trading policy would be acceptable to T. Rowe Price if it believes that the policy would provide sufficient protection to the T. Rowe Price Funds and their shareholders that is consistent with the excessive trading policy adopted by the funds' Boards.

There is no guarantee that T. Rowe Price will be able to identify or prevent all excessive or short-term trades or trading practices.

Unclaimed Accounts and Uncashed Checks

If your account has no activity for a certain period of time and/or mail sent to you from T. Rowe Price is deemed undeliverable, T. Rowe Price may be required to transfer (i.e., escheat) your account assets, including any assets related to uncashed checks to the appropriate state under its abandoned property laws. For IRAs accounts escheated to a state under these abandoned property laws, the escheatment will be treated as a taxable distribution to you and federal and any applicable state income tax will be withheld. This may also apply to your Roth IRA as well (see the T. Rowe Price Traditional and Roth IRA Disclosure and Custodial Agreement and/or the T. Rowe Price SIMPLE IRA Disclosure Statement and Custodial Agreement for more information). To avoid such action, it is important to keep your account address up to date and periodically communicate with T. Rowe Price by contacting us or logging in to your account at least once every two years.

Delivery of Shareholder Documents

If two or more accounts own the same fund, share the same address, and T. Rowe Price reasonably believes that the two accounts are part of the same household or institution, we may economize on fund expenses by mailing only one shareholder report and summary prospectus or prospectus, as applicable, for the fund. If you need additional copies or do not want your mailings to be “householded,” please call Shareholder Services.

T. Rowe Price can deliver account statements, transaction confirmations, prospectuses, tax forms, and shareholder reports electronically. If you are a registered user of **troweprice.com**, you can consent to the electronic delivery of these documents by logging in and changing your mailing preferences. You can revoke your consent at any time through **troweprice.com**, and we will begin to send paper copies of these documents within a reasonable time after receiving your revocation.

Signature Guarantees

A Medallion signature guarantee is designed to protect you and the T. Rowe Price Funds from fraud by verifying your signature.

A shareholder or financial intermediary may need to obtain a Medallion signature guarantee in certain situations, such as:

- Requests to wire redemption proceeds when bank account information is not already authorized and on file for an account;
- Remitting redemption proceeds to any person, address, or bank account not on file;
- Establishing certain services after an account is opened; or
- Changing the account registration or broker-dealer of record for an account.

Financial intermediaries should contact T. Rowe Price Financial Institution Services for specific requirements.

The signature guarantee must be obtained from a financial institution that is a participant in a Medallion signature guarantee program. You can obtain a Medallion signature guarantee from certain banks, savings institutions, broker-dealers, and other guarantors acceptable to T. Rowe Price. When obtaining a Medallion signature guarantee, please discuss with the guarantor the dollar amount of your proposed transaction. It is important that the level of coverage provided by the guarantor's stamp covers the dollar amount of the transaction or it may be rejected. We cannot accept guarantees from notaries public or organizations that do not provide reimbursement in the case of fraud.

Fund Operations and Shareholder Services

T. Rowe Price and The Bank of New York Mellon, subject to the oversight of T. Rowe Price, each provide certain accounting services to the T. Rowe Price Funds. T. Rowe Price Services, Inc., acts as the transfer agent and dividend disbursing agent and provides shareholder and administrative services to the funds. T. Rowe Price Retirement Plan Services, Inc., provides recordkeeping, sub-transfer agency, and administrative services for certain types of retirement plans investing in the funds. These companies receive compensation from the funds for their services. The funds may also pay financial intermediaries for performing shareholder and administrative services for underlying shareholders in omnibus accounts. In addition, certain funds serve as an underlying fund in which some fund-of-funds products, the T. Rowe Price Spectrum and Retirement Funds, invest. Subject to approval by each applicable fund's Board, each underlying fund bears its proportionate share of the direct operating expenses of the T. Rowe Price Spectrum and Retirement Funds. All of the fees previously discussed are included in a fund's financial statements and, except for funds that have an all-inclusive management fee, are also reflected in the "Other expenses" line that appears in the table titled "Fees and Expenses of the Fund" in Section 1.

CONTACTING T. ROWE PRICE

If you hold shares of a fund through a financial intermediary, you must contact your financial intermediary to determine the requirements for opening a new account and placing transactions. Otherwise, please contact T. Rowe Price as follows:

Web	
troweprice.com	For the most complete source of T. Rowe Price news To open an account For most account transactions

Owings Mills, MD 21117-4903

Investors in a small business retirement plan opening a new account, making a purchase by check, or placing an exchange or redemption should use the following addresses:

via U.S. mail

T. Rowe Price Retirement Client Services
P.O. Box 17350
Baltimore, MD 21297-1350

via private carriers/overnight services

T. Rowe Price
Attn.: Retirement Operations
4515 Painters Mill Road
Owings Mills, MD 21117-4903

Institutional investors (including financial intermediaries) opening a new account, making a purchase by check, or placing an exchange or redemption should use the following addresses:

via U.S. mail

T. Rowe Price Financial Institution Services
P.O. Box 17300
Baltimore, MD 21297-1603

via private carriers/overnight services

T. Rowe Price Financial Institution Services
Mail Code: OM-4232
4515 Painters Mill Road
Owings Mills, MD 21117-4842

Note: Your transaction will receive the share price for the business day that the request is received by T. Rowe Price or its agent prior to the close of the NYSE (normally 4 p.m. ET), which could differ from the day that the request is received at the post office box.

INFORMATION ON DISTRIBUTIONS AND TAXES

Each fund intends to qualify to be treated each year as a regulated investment company under Subchapter M of the Internal Revenue Code of 1986, as amended. In order to qualify, a fund must satisfy certain income, diversification, and distribution requirements. A regulated investment company is not subject to U.S. federal income tax at the portfolio level on income and gains from investments that are distributed to shareholders. However, if a fund were to fail to qualify as a regulated investment company and was ineligible to or otherwise did not cure such failure, the result would be fund-level taxation and, consequently, a reduction in income available for distribution to the fund's shareholders.

To the extent possible, all net investment income and realized capital gains are distributed to shareholders.

Dividends and Other Distributions

Except for the Retirement Income 2020 Fund, dividend and capital gain distributions are reinvested in additional fund shares in your account unless you select another option. For the Retirement Income 2020 Fund, subject to certain exceptions, regularly scheduled monthly dividends may generally not be reinvested. Reinvesting distributions results in compounding, which allows you to receive dividends and capital gain distributions on an increasing number of shares.

Distributions not reinvested may be paid by check or transmitted to your bank account via Automated Clearing House or may be automatically invested into another fund account. For the Retirement Income 2020 Fund, regularly scheduled monthly dividends are generally not paid by check. If the U.S. Postal Service cannot deliver your check or if your check remains uncashed for six months, the fund reserves the right to reinvest your distribution check in your account at the net asset value on the day of the reinvestment and to reinvest all subsequent distributions in additional shares of the fund. Interest will not accrue on amounts represented by uncashed distributions or redemption checks.

The following table provides details on dividend payments:

Dividend Payment Schedule	
Fund	Dividends
Money market funds	<ul style="list-style-type: none"> • Shares purchased via wire that are received by T. Rowe Price by noon ET begin to earn dividends on that day. Shares purchased via a wire received after noon ET and through other methods normally begin to earn dividends on the business day after payment is received by T. Rowe Price. • Dividends are declared daily and paid on the first business day of each month.
Bond funds	<ul style="list-style-type: none"> • Shares normally begin to earn dividends on the business day after payment is received by T. Rowe Price. • Dividends are declared daily and paid on the first business day of each month.
These stock funds only: <ul style="list-style-type: none"> • Balanced • Dividend Growth • Equity Income • Equity Index 500 • Global Real Estate • Growth & Income • Spectrum Conservative Allocation • Spectrum Moderate Allocation • Real Estate 	<ul style="list-style-type: none"> • Dividends, if any, are declared and paid quarterly, in March, June, September, and December. • Must be a shareholder on the dividend record date.
Other stock funds	<ul style="list-style-type: none"> • Dividends, if any, are declared and paid annually, generally in December. • Must be a shareholder on the dividend record date.
Retirement Income 2020	<ul style="list-style-type: none"> • Dividends are declared and normally paid in the middle of each month.
Retirement Balanced, Retirement I Balanced—I Class, and Spectrum Income	<ul style="list-style-type: none"> • Shares normally begin to earn dividends on the business day after payment is received by T. Rowe Price. • Dividends are declared daily and paid on the first business day of each month.
All other Retirement, Retirement I, Spectrum, and Target Funds	<ul style="list-style-type: none"> • Dividends, if any, are declared and paid annually, generally in December. • Must be a shareholder on the dividend record date.

For funds that declare dividends daily, shares earn dividends through the date of a redemption (for redemptions from money market funds where the request is received prior to noon ET and proceeds are sent via wire, shares only earn dividends through the calendar day prior to the date of redemption). Shares redeemed on a Friday or prior to a holiday will continue to earn dividends until the next business day. Generally, if you redeem all of your shares at any time during the month, you will also receive all dividends earned through the date of redemption in the same check. When you redeem only a portion of your shares, all dividends accrued on those shares will be reinvested, or paid in cash, on the next dividend payment date. The funds do not pay dividends in fractional cents. Any dividend amount earned for a particular day on all shares held that is one-half of one cent or greater (for example, \$0.016) will be rounded up to the next whole cent (\$0.02), and any amount that is less than one-half of one cent (for example, \$0.014) will be rounded down to the nearest whole cent (\$0.01). Please note that if the dividend payable on all shares held is less than one-half of one cent for a particular day, no dividend will be earned for that day.

If you purchase and redeem your shares through a financial intermediary, consult your financial intermediary to determine when your shares begin and stop accruing dividends as the information previously described may vary.

Capital Gain Payments

A capital gain or loss is the difference between the purchase and sale price of a security. If a fund has net capital gains for the year (after subtracting any capital losses), they are usually declared and paid in December to shareholders of record on a specified date that month. If a second distribution is necessary, it is generally paid the following year. A fund may have to make additional capital gain distributions, if necessary, to comply with the applicable tax law. Capital gains are not expected from government or retail money market funds since they are managed to maintain a stable share price. However, if a money market fund unexpectedly has net capital gains for the year (after subtracting any capital losses), the capital gain may be declared and paid in December to shareholders of record.

Tax Information

In most cases, you will be provided information for your tax filing needs no later than mid-February.

If you invest in the fund through a tax-deferred account, such as an IRA or employer-sponsored retirement plan, you will not be subject to tax on dividends and distributions from the fund or the sale of fund shares if those amounts remain in the tax-deferred account. You may receive a Form 1099-R or other Internal Revenue Service forms, as applicable, if any portion of the account is distributed to you.

If you invest in the fund through a taxable account, you generally will be subject to tax when:

- You sell fund shares, including an exchange from one fund to another.
- The fund makes dividend or capital gain distributions.

Additional information about the taxation of dividends for certain T. Rowe Price Funds is listed below:

Tax-Free and Municipal Funds

- Regular monthly dividends (including those from the state-specific tax-free funds) are expected to be exempt from federal income taxes.
- Exemption is not guaranteed since the fund has the right under certain conditions to invest in nonexempt securities.
- Tax-exempt dividends paid to Social Security recipients may increase the portion of benefits that is subject to tax.
- For state-specific funds, the monthly dividends you receive are expected to be exempt from state and local income tax of that particular state. For other funds, a small portion of your income dividend may be exempt from state and local income taxes.
- If a fund invests in certain “private activity” bonds that are not exempt from the alternative minimum tax, shareholders who are subject to the alternative minimum tax must include income generated by those bonds in their alternative minimum tax calculation. The portion of a fund’s income dividend that should be included in your alternative minimum tax calculation, if any, will be reported to you by mid-February on Form 1099-DIV.

For individual shareholders, a portion of ordinary dividends representing “qualified dividend income” received by the fund may be subject to tax at the lower rates applicable to long-term capital gains rather than ordinary income. You may report it as “qualified dividend income” in computing your taxes, provided you have held the fund shares on which the dividend was paid for more than 60 days during the 121-day period beginning 60 days before the ex-dividend date. Ordinary dividends that do not qualify for this lower rate are generally taxable at the investor’s marginal income tax rate. This includes the portion of ordinary dividends derived from interest, short-term capital gains, income and gains from derivatives, distributions from nonqualified foreign corporations, distributions from real estate investment trusts, and dividends received by the fund from stocks that were on loan. For taxable years ending after December 31, 2017, and before January 1, 2026, you are generally allowed a deduction up to 20% on your qualified REIT dividends. You may not take this deduction for a dividend on shares of a fund that have been held for less than 46 days during the 91-day period beginning on the date 45 days before the ex-dividend date. Little, if any, of the ordinary dividends paid by the bond funds or money market funds is expected to qualify for treatment as qualified dividend income or qualified REIT dividends.

For corporate shareholders, a portion of ordinary dividends may be eligible for the deduction for dividends received by corporations to the extent the fund’s income consists of dividends paid by U.S. corporations. Little, if any, of the ordinary dividends paid by the international stock funds, bond funds, or money market funds is expected to qualify for this deduction.

A 3.8% net investment income tax is imposed on net investment income, including interest, dividends, and capital gains of U.S. individuals with income exceeding \$200,000 (or \$250,000 if married filing jointly) and of estates and trusts.

If you hold your fund through a financial intermediary, the financial intermediary is responsible for providing you with any necessary tax forms. You should contact your financial

intermediary for the tax information that will be sent to you and reported to the Internal Revenue Service.

Taxes on Fund Redemptions

When you sell shares in any fund, you may realize a gain or loss. An exchange from one fund to another fund in a taxable account is also a sale for tax purposes. As long as a money market fund maintains a stable share price of \$1.00, a redemption or exchange to another fund will not result in a gain or loss for tax purposes. However, an exchange from one fund into a money market fund may result in a gain or loss on the fund from which shares were redeemed.

All or a portion of the loss realized from a sale or exchange of your fund shares may be disallowed under the “wash sale” rule if you purchase substantially identical shares within a 61-day period beginning 30 days before and ending 30 days after the date on which the shares are sold or exchanged. Shares of the same fund you acquire through dividend reinvestment are shares purchased for the purpose of the wash sale rule and may trigger a disallowance of the loss for shares sold or exchanged within the 61-day period of the dividend reinvestment. Any loss disallowed under the wash sale rule is added to the cost basis of the purchased shares.

T. Rowe Price (or your financial intermediary) will make available to you Form 1099-B, if applicable, no later than mid-February, providing certain information for each sale you made in the fund during the prior year. Unless otherwise indicated on your Form 1099-B, this information will also be reported to the Internal Revenue Service. For mutual fund shares acquired prior to 2012 in most accounts established or opened by exchange in 1984 or later, our Form 1099-B will provide you with the gain or loss on the shares you sold during the year based on the average cost single category method. This information on average cost and gain or loss from sale is not reported to the Internal Revenue Service. For these mutual fund shares acquired prior to 2012, you may calculate the cost basis using other methods acceptable to the Internal Revenue Service, such as specific identification.

For mutual fund shares acquired after 2011, federal income tax regulations require us to report the cost basis information on Form 1099-B using a cost basis method selected by the shareholder in compliance with such regulations or, in the absence of such selected method, our default method if you acquire your shares directly from T. Rowe Price. Our default method is average cost. For any fund shares acquired through a financial intermediary after 2011, you should check with your financial intermediary regarding the applicable cost basis method. You should note that the cost basis information reported to you may not always be the same as what you should report on your tax return because the rules applicable to the determination of cost basis on Form 1099-B may be different from the rules applicable to the determination of cost basis for reporting on your tax return. Therefore, you should save your transaction records to make sure the information reported on your tax return is accurate. T. Rowe Price and financial intermediaries are not required to issue a Form 1099-B to report sales of money market fund shares.

To help you maintain accurate records, T. Rowe Price will make available to you a confirmation promptly following each transaction you make (except for systematic purchases

and systematic redemptions) and a year-end statement detailing all of your transactions in each fund account during the year. If you hold your fund through a financial intermediary, the financial intermediary is responsible for providing you with transaction confirmations and statements.

Taxes on Fund Distributions

T. Rowe Price (or your financial intermediary) will make available to you, as applicable, generally no later than mid-February, a Form 1099-DIV, or other Internal Revenue Service forms, as required, indicating the tax status of any income dividends, dividends exempt from federal income taxes, and capital gain distributions made to you. This information will be reported to the Internal Revenue Service. Taxable distributions are generally taxable to you in the year in which they are paid. A dividend declared in October, November, or December and paid in the following January is generally treated as taxable to you as if you received the distribution in December. Dividends from tax-free funds are generally expected to be tax-exempt for federal income tax purposes. Your bond fund and money market fund dividends for each calendar year will include dividends accrued up to the first business day of the next calendar year. Ordinary dividends and capital gain dividends may also be subject to state and local taxes. You will be sent any additional information you need to determine your taxes on fund distributions, such as the portion of your dividends, if any, that may be exempt from state and local income taxes.

Taxable distributions are subject to tax whether reinvested in additional shares or received in cash.

The tax treatment of a capital gain distribution is determined by how long the fund held the portfolio securities, not how long you held the shares in the fund. Short-term (one year or less) capital gain distributions are taxable at the same rate as ordinary income, and gains on securities held for more than one year are taxed at the lower rates applicable to long-term capital gains. If you realized a loss on the sale or exchange of fund shares that you held for six months or less, your short-term capital loss must be reclassified as a long-term capital loss to the extent of any long-term capital gain distributions received during the period you held the shares. For funds investing in foreign instruments, distributions resulting from the sale of certain foreign currencies, currency contracts, and the foreign currency portion of gains on debt instruments are taxed as ordinary income. Net foreign currency losses may cause monthly or quarterly dividends to be reclassified as returns of capital.

A fund's distributions that have exceeded the fund's earnings and profits for the relevant tax year may be treated as a return of capital to its shareholders. A return of capital distribution is generally nontaxable but reduces the shareholder's cost basis in the fund, and any return of capital in excess of the cost basis will result in a capital gain.

The tax status of certain distributions may be recharacterized on year-end tax forms, such as your Form 1099-DIV. Distributions made by a fund may later be recharacterized for federal income tax purposes—for example, from taxable ordinary income dividends to returns of capital. A recharacterization of distributions may occur for a number of reasons, including the

recharacterization of income received from underlying investments, such as REITs, and distributions that exceed taxable income due to losses from foreign currency transactions or other investment transactions. Certain funds, including international bond funds and funds that invest significantly in REITs, are more likely to recharacterize a portion of their distributions as a result of their investments. The Retirement Income 2020 Fund is also more likely to have some or all of its distributions recharacterized as returns of capital because of the predetermined monthly distribution amount.

If the fund qualifies and elects to pass through nonrefundable foreign income taxes paid to foreign governments during the year, your portion of such taxes will be reported to you as taxable income. However, you may be able to claim an offsetting credit or deduction on your tax return for those amounts. There can be no assurance that a fund will meet the requirements to pass through foreign income taxes paid.

If you are subject to backup withholding, we will have to withhold a 24% backup withholding tax on distributions and, in some cases, redemption payments. You may be subject to backup withholding if we are notified by the Internal Revenue Service to withhold, you have failed one or more tax certification requirements, or our records indicate that your tax identification number is missing or incorrect. Backup withholding is not an additional tax and is generally available to credit against your federal income tax liability with any excess refunded to you by the Internal Revenue Service.

The following table provides additional details on distributions for certain funds:

Taxes on Fund Distributions
<p>Tax-Free and Municipal Funds</p> <ul style="list-style-type: none"> • Gains realized on the sale of market discount bonds with maturities beyond one year may be treated as ordinary income and cannot be offset by other capital losses. • Payments received or gains realized on certain derivative transactions may result in taxable ordinary income or capital gains. • To the extent the fund makes such investments, the likelihood of a taxable distribution will be increased.
<p>Limited Duration Inflation Focused Bond and Inflation Protected Bond Funds</p> <ul style="list-style-type: none"> • Inflation adjustments on Treasury Inflation Protected Securities that exceed deflation adjustments for the year will be distributed as a short-term capital gain, resulting in ordinary income. • In computing the distribution amount, the funds cannot reduce inflation adjustments by short- or long-term capital losses from the sales of securities. • Net deflation adjustments for a year may result in all or a portion of dividends paid earlier in the year being treated as a return of capital.
<p>Retirement, Retirement I, Spectrum, and Target Funds</p> <ul style="list-style-type: none"> • Distributions by the underlying funds and changes in asset allocations may result in taxable distributions of ordinary income or capital gains.

Tax Consequences of Liquidity Fees

It is currently anticipated that shareholders of retail money market funds that impose a liquidity fee may generally treat the liquidity fee as offsetting the shareholder’s amount realized

on the redemption (thereby decreasing the shareholder's gain, or increasing the shareholder's loss, on the redeemed amount). A fund that imposes a liquidity fee anticipates using 100% of the fee to help repair a market-based net asset value per share that was below \$1.00.

Because the retail money market funds use amortized cost to maintain a stable share price of \$1.00, in the event that a liquidity fee is imposed, a fund may need to distribute to its remaining shareholders sufficient value to prevent the fund from breaking the buck on the upside (i.e., by rounding up to \$1.01 in pricing its shares) if the imposition of a liquidity fee causes the fund's market-based net asset value to reach \$1.0050. To the extent that a fund has sufficient earnings and profits to support the distribution, the additional dividends would be taxable as ordinary income to shareholders and would be eligible for deduction by the fund. Any distribution in excess of the fund's earnings and profits would be treated as a return of capital, which would reduce your cost basis in the fund shares.

Tax Consequences of Hedging

Entering into certain transactions involving options, futures, swaps, and forward currency exchange contracts may result in the application of the mark-to-market and straddle provisions of the Internal Revenue Code. These provisions could result in a fund being required to distribute gains on such transactions even though it did not close the contracts during the year or receive cash to pay such distributions. The fund may not be able to reduce its distributions for losses on such transactions to the extent of unrealized gains in offsetting positions.

Tax Effect of Buying Shares Before an Income Dividend or Capital Gain Distribution

If you buy shares shortly before or on the record date—the date that establishes you as the person to receive the upcoming distribution—you may receive a portion of the money you just invested in the form of a taxable distribution. Therefore, you may wish to find out a fund's record date before investing. In addition, a fund's share price may, at any time, reflect undistributed capital gains or income and unrealized appreciation, which may result in future taxable distributions. Such distributions can occur even in a year when the fund has a negative return.

RIGHTS RESERVED BY THE FUNDS

T. Rowe Price Funds and their agents, in their sole discretion, reserve the following rights: (1) to waive or lower investment minimums; (2) to accept initial purchases by telephone; (3) to refuse any purchase or exchange order; (4) to cancel or rescind any purchase or exchange order placed through a financial intermediary no later than the business day after the order is received by the financial intermediary (including, but not limited to, orders deemed to result in excessive trading, market timing, or 5% ownership); (5) to cease offering fund shares at any time to all or certain groups of investors; (6) to freeze any account and suspend account services when notice has been received of a dispute regarding the ownership of the account, or a legal claim against an account, upon initial notification to T. Rowe Price of a shareholder's

death until T. Rowe Price receives required documentation in correct form, or if there is reason to believe a fraudulent transaction may occur; (7) to otherwise modify the conditions of purchase and modify or terminate any services at any time; (8) to waive any wire, small account, maintenance, or fiduciary fees charged to a group of shareholders; (9) to act on instructions reasonably believed to be genuine; (10) to involuntarily redeem an account at the net asset value calculated the day the account is redeemed when permitted by law, including in cases of threatening conduct, suspected fraudulent or illegal activity, or if the fund or its agent is unable, through its procedures, to verify the identity of the person(s) or entity opening an account; and (11) for money market funds, to suspend redemptions to facilitate an orderly liquidation.

The fund's Statement of Additional Information, which contains a more detailed description of the fund's operations, investment restrictions, policies and practices, has been filed with the SEC. The Statement of Additional Information is incorporated by reference into this prospectus, which means that it is legally part of this prospectus even if you do not request a copy. Further information about the fund's investments, including a review of market conditions and the manager's recent investment strategies and their impact on performance during the past fiscal year, is available in the annual and semiannual shareholder reports. These documents and updated performance information are available through troweprice.com. For inquiries about the fund and to obtain free copies of any of these documents, call 1-800-638-5660. If you invest in the fund through a financial intermediary, you should contact your financial intermediary for copies of these documents.
