Investment Objective & Strategy

The fund seeks long-term growth of capital.

The fund normally invests primarily in large-cap U.S. companies with value characteristics.

Our integrated approach to investing combines fundamental analysis and quantitative models to help shape our process for security selection, portfolio construction, and risk management in a systematic manner.

The portfolio is generally constructed by buying higher ranked stocks and selecting stocks to sell from those that have a lower rank, subject to overall risk controls and desired portfolio characteristics.

Past performance is not a guarantee or a reliable indicator of future results. Investment return and principal value will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. The Fund's total return figures reflect the reinvestment of dividends and capital gains, if any.

The fund(s) may have other share classes available that offer different investment minimums and fees. See the prospectus for details.

Risks: Quantitative models: The fund's reliance on quantitative models and the analysis of specific metrics in constructing the fund's portfolio could cause the adviser to be unsuccessful in selecting companies for investment or determining the weighting of particular stocks in the portfolio. **Large-cap stocks:** Securities issued by large-cap companies tend to be less volatile than securities issued by small- and mid-cap companies. However, large-cap companies may not be able to attain the high growth rates of successful small- and mid-cap companies, especially during strong economic periods, and may be unable to respond as quickly to competitive challenges. See the prospectus for more detail on the fund's principal risks.

Morningstar rated the fund 3 and 4 stars among 1,086 and 1,025 Large Value funds for the 3- and 5-year periods (as applicable) ending 9/30/2025, respectively.
