FACT SHEET
Balanced Fund - I Class
As of March 31, 2022

INVESTMENT OBJECTIVE AND STRATEGY
The fund seeks to provide capital growth, current income, and preservation of capital through a portfolio of stocks and fixed income securities.
- Invests approximately 65% of total assets in U.S. and foreign common stocks and 35% in fixed-income securities.
- At least 25% of total assets will be invested in fixed-income senior securities.

BENEFITS AND RISKS
- Offers a way to try to balance the potential capital appreciation of common stocks with the income and relative stability of bonds over the long term.
- Stock prices can fall because of weakness in the broad market, a particular industry, or specific holdings.
- Bonds may decline due to rising interest rates, a credit rating downgrade, or failure of the issuer to make timely payments of interest or principal.
- Foreign investments are subject to risks, including adverse political and economic developments overseas, greater volatility, less liquidity, and the possibility that foreign currencies will decline against the dollar.

Performance data quoted represents past performance and is not a reliable indicator of future performance. Investment return and principal value will fluctuate so that an investor’s shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than the performance data quoted. To obtain the most recent month-end performance, visit troweprice.com. Consider the investment objectives, risks, and charges and expenses carefully before investing. For a prospectus or, if available, a summary prospectus containing this and other information, call 1-855-405-6488 or visit troweprice.com. Read it carefully. The T. Rowe Price fund shares the portfolio of an existing fund (the original share class of the fund is referred to as the "investor class"). The total return figures for this I Class have been calculated using the performance data of the Investor Class up to the inception date of the I Class (12/17/15) and the actual performance results of the I Class since that date. Because the I Classes are expected to have lower expenses than the Investor Classes, the I Class performance, had it existed over the periods shown, would have been higher. The average annual total return figures reflect the reinvestment of dividends and capital gains, if any.
