INVESTMENT OBJECTIVE AND STRATEGY

The fund seeks to track the performance of a benchmark index that measures the investment return of large-capitalization U.S. stocks.

Invests substantially all of its assets in all of the stocks in the S&P 500 Index.

Attempts to maintain holdings of each stock in proportion to its weight in the index.

BENEFITS AND RISKS

Offers a convenient and relatively low-cost way to approximate the performance of a particular market.

Expenses are lower than the average actively managed fund, and lower expenses can increase total return.

Lower turnover should mean smaller capital gain distributions, which can raise after-tax returns.

Stocks can decline for many reasons, including adverse political or economic developments here or abroad, changes in investor psychology, or heavy institutional selling.

Actively managed funds may outperform this fund.

CUMULATIVE RETURNS

Growth of \$10,000

Definitions

Beta: A measure of market risk of an investment option that shows how responsive the investment is to a given market index, such as the Standard & Poor's 500 Index. By definition, the beta of the benchmark is 1.00. An investment with a beta of 1.10 is expected to perform 10% better than the index in up markets and 10% worse in down markets. Usually, higher betas represent riskier investments. Figures are calculated using monthly data and are net of fees.
