Performance data quoted represents past performance and is not a reliable indicator of future performance. Investment return and principal value will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than the performance data quoted. To obtain the most recent month-end performance, visit [troweprice.com](https://www.troweprice.com). The average annual total return figures reflect the reinvestment of dividends and capital gains, if any.

*Effective June 1, 2019, the "net" version of the benchmark replaced the "gross" version of the benchmark. The "net" version of the benchmark assumes the reinvestment of dividends after the deduction of withholding taxes. Historical benchmark representations have been restated to show net of withholding taxes. Linked Performance benchmark is the S&P Developed ex-U.S. Small Cap Index Net prior to July 1, 2009 and S&P Global ex-U.S. Small Cap Index Net from July 1, 2009 to current period end. INVESTMENT OBJECTIVE AND STRATEGY

The fund seeks long-term growth of capital through investments primarily in the common stocks of rapidly growing, small- to medium-sized companies outside the U.S.

The fund is actively managed and invests in a variety of industries in developed and emerging markets.

The fund seeks to invest in firms with quality management, strength of franchise, reasonable valuation, and strong cash flows that are at an advantageous point in the company life cycle.

BENEFITS AND RISKS

Over long periods, international investing offers diversification benefits relative to an all-U.S. portfolio. Diversification cannot assure a profit or protect against loss in a declining market.

Investing internationally involves special risks, including economic and political uncertainty and currency fluctuation.

Generally, a fund that invests in emerging markets represents higher risk and potential reward than one focusing on more mature economies and markets.

Definitions

Beta: A measure of market risk of an investment option that shows how responsive the investment is to a given market index, such as the Standard & Poor's 500 Index. By definition, the beta of the benchmark is 1.00. An investment with a beta of 1.10 is expected to perform 10% better than the index in up markets and 10% worse in down markets. Usually, higher betas represent riskier investments. Figures are calculated using monthly data and are net of fees.
