Risk Disclosure

There is risk that the fund's investments will correlate with stocks and bonds to a greater degree than anticipated, and that the risk models used to construct the portfolio may not achieve the desired results. The fund may underperform during up markets and be negatively affected in down markets. Diversification does not assure a profit or eliminate the risk of loss.

International investments can be riskier than U.S. investments due to the effects of currency exchange rates, differences in market structure and liquidity, as well as specific country, regional, and economic developments. These risks are generally greater for emerging markets. Fixed income securities are subject to interest rate, inflation, credit, and default risk. As interest rates rise, bond prices usually fall, and vice versa.

Derivatives may be more volatile than other types of investments because they can be more sensitive to changes in market or economic conditions; risks include currency, leverage, liquidity, index, pricing, and counterparty. Short sales are speculative transactions with potentially unlimited losses; use of leverage can magnify the effect of losses.
