QUARTERLY REVIEW

Blue Chip Growth Fund – Multi-Class

As of June 30, 2021

PORTFOLIO HIGHLIGHTS

The portfolio outperformed the S&P 500 Index during the three-month period ended June 30, 2021.

Relative performance drivers:

- Stock choices in the communication services sector drove relative outperformance.
- Stock picks in the information technology sector also helped relative returns.
- Conversely, a lack of exposure to the real estate sector cramped relative returns.

Additional highlights:

- Given the current environment, we continue to emphasize secular growth companies with strong competitive positions in large addressable markets that support multiyear growth horizons.
- Amid uncertainty, asset returns are likely to remain uneven across many industries and companies, creating the potential to add value with our strategic investing approach but requiring careful analysis to identify opportunities and help manage risk.

Performance data quoted represents past performance and is not a reliable indicator of future performance. Investment return and principal value will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than the performance data quoted. To obtain the most recent month-end performance, visit troweprice.com. Consider the investment objectives, risks, and charges and expenses carefully before investing. For a prospectus or, if available, a summary prospectus containing this and other information, call 1-877-804-2315 or visit troweprice.com. Read it carefully. The Fund's total return figures reflect the reinvestment of dividends and capital gains, if any.

The T. Rowe Price Fund shares the portfolio of an existing fund (the original share class of the fund referred to as the "investor class"). The total return figures for the I Class shares have been calculated using the performance data of the investor class up to the inception date of the I Class (12/17/15) and the actual performance results of the I Class since that date. Because the I Classes are expected to have lower expenses than the Investor Classes, the I Class performance, had it existed over the periods shown, would have been higher.

The Fund is subject to the volatility inherent in common stock investing, and its share price may fluctuate more than a Fund investing in income-oriented stocks.

The fund(s) may have other share classes available that offer different investment minimums and fees. See the prospectus for details. For Sourcing Information, please see Additional Disclosures.

PERFORMANCE REVIEW

Stocks recorded strong gains in the second quarter as large-caps and growth shares reasserted their market leadership. The quarter was also notable for considerable volatility in so-called meme or chatroom stocks: smaller-cap, mainly consumer-oriented shares discussed heavily on social media platforms. Investor sentiment was boosted by a robust economic recovery driven by both fiscal stimulus and an accelerated coronavirus vaccine rollout. Gross domestic product expanded at an annualized rate of 6.4% in the first quarter, and many economists were predicting the fastest full-year growth since 1984. In a less welcome return to the past, inflation pressures also grew over the period. On May 12, the S&P 500 Index had its worst day of the quarter after the Labor Department reported that core (excluding food and energy) consumer prices jumped by 0.9% in April, the most in nearly four decades.

Communication Services Stocks Drove Relative Outperformance
Within the sector, select interactive media and services companies performed well, due in large part to the acceleration of digital advertising growth on the heels of outsized e-commerce penetration during the pandemic. We maintain an overweight to the sector as we continue to find attractive opportunities in companies with innovative business models that can take advantage of transformational change.

- Shares of Alphabet climbed higher after the company announced positive quarterly results that showed broad-based strength across all segments. Notably, its core search advertising benefited from robust retail demand as e-commerce players attempt to sustain their momentum from the pandemic, while brick-and-mortar retailers look to drive traffic during the reopening stage of the economy. YouTube results were also above consensus as advertiser interest in direct-response ads grew, in response to more embedded e-commerce functionality. Alongside the durable secular growth engine of search advertising, the company continues to ramp monetization within other areas of leadership, such as video and navigation. With dominant positions across every-day-use internet utilities, combined with a world-class computing infrastructure and talent, we think Alphabet is well positioned to extract value from the economy as the world becomes more digital.
- Shares of Facebook surged after the company reported quarterly results that significantly outpaced consensus estimates. A healthy increase in the average price per ad, as well as a double-digit rise in the number of ads shown across platforms, were the primary drivers of topline growth. Moreover, its "other revenue" segment, which represents sales of Oculus virtual reality headsets and Portal video-chatting devices, more than doubled year-over-year, with the company looking to aggressively invest in areas such as virtual and augmented reality, commerce, and the creator economy. Overall, we think Facebook's share of consumer time spent on mobile devices, coupled with its ad monetization and targeting capabilities, should help it generate advertising-led revenue growth over the next several years.

Stock Selection in Information Technology Boosted Relative Returns
Within the sector, select firms within the software industry reported impressive earnings results. The broader sector gained further support at the end of the period after the Federal Reserve signaled a hawkish view toward interest rates and inflation.

- Shares of Intuit rose after the company raised its fiscal guidance due to an improving outlook for both its small business segment and its consumer credit-monitoring business. Overall, we believe Intuit's dominant market position and transition to software-as-a-service products should expand the company's addressable market, leading to durable, above-average earnings growth over the long term.
- PayPal Holdings continued to benefit from the utilization of e-commerce and digital payments during the pandemic. The company's management team also raised its fiscal year 2021 guidance during the period and announced its payment app, Venmo, will soon monetize product and services transactions. Overall, we like the company's strong balance sheet, its leverage to growth in e-commerce, and the potential for further monetization via Venmo.

An Underweight to Industrials and Business Services Helped Relative Performance
An underweight to the sector boosted relative returns as the segment lagged the broader index during the period. Within the sector, select airlines were pressured by labor shortages and technical issues, which necessitated the cancelation of thousands of flights. Overall, we maintain a relatively small position in the sector, with a focus on areas where we believe there is secular, rather than cyclical, growth. As such, we continue to emphasize unique, company-specific opportunities that we believe can drive meaningful growth regardless of the economic backdrop.

An Underweight to Consumer Staples Helped Relative Returns
A significant underweight to the traditionally defensive sector helped relative performance as a sustained market rotation into more cyclical stocks amid the ongoing economic recovery cramped the performance of many companies in the sector. The portfolio has minimal exposure to consumer staples stocks as the segment generally lacks compelling growth opportunities that meet our investment criteria.

A Lack of Exposure to Real Estate Names Hurt Relative Results
Not owning stocks in the sector weighed on relative performance as the broader segment benefited from the reopening of the economy and positive vaccine news. The portfolio has no exposure to stocks in the real estate sector, where attractive growth opportunities are difficult to find.

PORTFOLIO POSITIONING AND ACTIVITY

Given the current environment, we continue to emphasize secular growth companies with strong competitive positions in large addressable markets that support multiyear growth horizons. Prominent sectors in the portfolio, including information technology, consumer discretionary, communication services, and health care, are areas that we continue to believe offer fertile ground for innovative companies to achieve above-average growth prospects.

Information Technology
Within the information technology sector, we focus on innovative business models that can take advantage of transformational

change. We favor companies with durable businesses that address large and growing markets, including electronic payment processing and public cloud computing services.

- We bought shares of software company Microsoft. We believe that we are in a golden age of technology and that Microsoft is structurally advantaged to deliver the greatest broad-based value and thus garner disproportionate rewards. Microsoft has built a favorable position around its Office 365 and Azure cloud platforms such that customers increase technology purchases year after year. Overall, we appreciate Microsoft's smart capital allocation, the durable growth prospects of its cloud business, and the potential of its push into analytics and artificial intelligence.
- We moderated the portfolio's position in Apple due to reports that iPhone sales have begun to slow down. The company also faced antitrust scrutiny in Europe for its policies related to its App Store, especially its commission fees. We continue to maintain an underweight position relative to the benchmark due to concerns over saturation and elongation of replacement cycles for smartphones and doubts around Apple's ability to grow its services business enough to sustain high levels of growth.

Consumer Discretionary
We remain optimistic about stock-specific opportunities within the consumer discretionary sector. We favor businesses benefiting from the secular shift of consumer spending to online products and services. We believe industries such as physical retail and traditional media are secularly challenged; therefore, we plan to continue emphasizing companies within the sector that we think are on the right side of change and disruption.

- We bought shares of DoorDash, a technology company that connects consumers with restaurants using its proprietary mobile app or website and independent couriers. The company offers multiple protocols for integrating with a restaurant's point-of-sale system. We appreciate the firm's low-cost sales model, its superior market strategy, and its gravitation toward scale. We believe it can continue its leadership position in the U.S. and eventually dominate this large and growing market that is ripe for change.
- Although we expect Alibaba Group Holding to continue to be a solid growth company, we have softened our near-term outlook on the business due to ongoing regulatory challenges. Alibaba also recently announced a stepped-up investment cycle as the tech juggernaut attempts to accelerate user growth and defend its market share within its core e-commerce business in China. Due to the implied thesis change, we chose to sell shares and reallocate funds to names where we have higher conviction.

Communication Services
Within the communication services sector, we continue to seek attractive opportunities in companies with innovative business models that can take advantage of transformational change. We favor companies with durable business models that address large and growing markets, including internet search and advertising and social connectivity.

- We added shares of Alphabet to the portfolio during the quarter. Alongside the durable secular growth engine of search advertising, the company continues to ramp monetization within other areas of leadership, such as video and navigation. With dominant positions across every-day-use internet utilities, combined with a world-class computing infrastructure and talent, we think Alphabet is well positioned to extract value from the economy as the world becomes more digital.
- We sold shares of Netflix as we think near-term growth will be challenged following the tremendous pull-forward of subscriptions that the company witnessed during the pandemic. While we trimmed the portfolio's position, we continue to like Netflix over the long term for the virtuous, and profitable, cycle that the company has built by growing subscribers, developing programming, and improving algorithms, providing the firm with increased leverage over content suppliers.

Health Care
Our allocation to the health care sector is composed of select therapeutics and medical device companies that we believe have limited exposure to potential regulatory pressures. We are also emphasizing managed care companies positioned to benefit from industry consolidation as well as the increasing focus on providing cost-effective solutions.

- We added shares of Intuitive Surgical as the company reported outstanding first-quarter results that benefited from better-than-expected progress in procedure growth, which is notable as there was considerable pandemic-related weakness in January and early February. The company's revenue and earnings are also showing signs of durable recovery and increased penetration in robotic surgery at the expense of laparoscopic and other traditional open surgical techniques. Going forward, we believe fundamentals should continue to pick up as the company continues to recover from pandemic-inflicted headwinds.
- We scaled back the portfolio's position in Vertex Pharmaceuticals after management announced the discontinuation of VX-864, a drug aimed at treating Alpha-1 antitrypsin deficiency (AATD) and a key part of Vertex's pipeline. The announcement lowered our conviction in our investment thesis, leading to our decision to sell. We prefer other names in the sector that we feel offer more attractive risk/reward profiles.

MANAGER'S OUTLOOK

Looking ahead, there are several key factors that we are monitoring closely: (1) the pace and longevity of inflationary pressures as the economy gains steam, (2) Fed monetary policy decisions around the timing of tapering asset purchases and interest rate hikes, and (3) progression of Democratic initiatives around infrastructure spending and corporate tax reform. That said, as long-term-oriented investors rooted in bottom-up fundamental research, we try not to overreact to incremental changes in economic policy, with the belief that secular forces driving innovation and disruption will outweigh most political and economic cross-currents. With elevated multiples across much of the market, we are staying mindful of valuations given the risk for interest rate hikes and subsequent multiple contraction.

In terms of relative performance, a market environment that benefits stocks with the most exposure to accelerating economic growth can present near-term challenges for the secular growers that we favor. However, as long as the high-quality companies we invest in can execute their long-term strategies and grow their cash flows rapidly, we remain confident in their potential to compound in value over a full economic cycle.

Amid uncertainty, asset returns are likely to remain uneven across many industries and companies, creating the potential to add value with our strategic investing approach but requiring careful analysis to identify opportunities and help manage risk. With this in mind, we will continue to emphasize high-quality growth companies that we believe can continue to generate durable earnings and free cash flow growth in most economic and regulatory environments. As always, we maintain a disciplined adherence to our rigorous investment process, which is rooted in bottom-up, fundamental research.
