

QUARTERLY REVIEW

All - Cap Opportunities Fund – Multi-Class

As of December 31, 2021

PORTFOLIO HIGHLIGHTS

The portfolio underperformed the Russell 3000 Index during the three-month period ended December 31, 2021.

Relative performance drivers:

- Information technology hurt relative returns the most due to stock choices.
- Communication services also detracted from relative returns due to an underweight.
- Conversely, health care boosted relative performance the most due to stock selection.

Additional highlights:

- Strong performance from a handful of large tech names masked what was an otherwise a very choppy market environment, marked by significant carnage among growth stocks, which impacted relative results given our growth tilt relative to the core benchmark.
- With inflation fears and higher rates on the horizon causing an unwind in growth names with demanding valuations, we shifted our overall exposure modestly closer to "core" on the style spectrum and have taken on a slightly more defensive posture.

Performance data quoted represents past performance and is not a reliable indicator of future performance. Investment return and principal value will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than the performance data quoted. To obtain the most recent month-end performance, visit troweprice.com. Consider the investment objectives, risks, and charges and expenses carefully before investing. For a prospectus or, if available, a summary prospectus containing this and other information, call 1-877-804-2315 or visit troweprice.com. Read it carefully. The Fund's total return figures reflect the reinvestment of dividends and capital gains, if any.

The T. Rowe Price Fund shares the portfolio of an existing fund (the original share class of the fund referred to as the "investor class"). The total return figures for the I Class shares have been calculated using the performance data of the investor class up to the inception date of the I Class (12/17/15) and the actual performance results of the I Class since that date. Because the I Classes are expected to have lower expenses than the Investor Classes, the I Class performance, had it existed over the periods shown, would have been higher.

Effective 1 March 2021, the benchmark for the Fund changed to the Russell 3000 Index. Prior to this change, the benchmark was the Russell 1000 Growth Index.

Prior to 1 March 2021, the name of the All-Cap Opportunities Fund was the New America Growth Fund.

The fund is subject to market risk and share price decline more than non-growth oriented funds in down markets due to the higher valuations/lower yields of growth stocks.

The fund(s) may have other share classes available that offer different investment minimums and fees. See the prospectus for details. For Sourcing Information, please see Additional Disclosures.

PERFORMANCE REVIEW

Strong Profits Support Markets in the Face of Virus and Rate Worries

Stocks recorded solid gains in the quarter after overcoming a late-November sell-off in reaction to the global spread of the omicron variant of the coronavirus. Growth stocks outpaced value shares among large-caps, but value stocks generally performed better among mid- and small-caps. As the quarter came to an end, investors seemed reassured that the omicron variant appeared to cause milder illness and seemed to have peaked rapidly in South Africa, where it was first discovered. In addition, the approval of two new, pill-based treatments for those seriously ill with COVID-19 seemed to calm fears. The prospect of higher interest rates as the Federal Reserve took its first tightening steps also periodically weighed on sentiment. Consumer prices rose 6.8% in the 12 months ended in November, the biggest increase since 1982. Nevertheless, investor sentiment alongside corporate profits seemed to remain resilient in the face of higher input and wage costs.

Information Technology Hurt Relative Returns the Most Due to Stock Choices

Tech stocks were volatile amid inflation concerns, depressed job growth, and the potential effect of the omicron variant on economic recovery. While select names profited from businesses reopening and updating aging hardware and equipment, underperformance among some payment companies due to ongoing COVID-19-related travel restrictions and a growing market narrative around new entrants disrupting the current payment ecosystem proved to be a source of weakness for the portfolio. While investors sought to rotate out of many tech companies with extended valuations toward the end of the period, several of the biggest names in the sector came to be viewed as safe havens; the portfolio's underweight to these companies hampered returns.

- Euronet Worldwide provides electronic payment and transaction processing solutions for financial institutions, retailers, service providers, and individual consumers. Shares traded lower following mixed third-quarter earnings results; while Euronet beat consensus expectations regarding quarterly revenue and adjusted EBITDA, investors reacted negatively to its lower-than-expected 2022 EPS guidance as the company expects that COVID-19 lockdowns and travel restrictions will continue to depress its money transfer segment into the foreseeable future. While we are cognizant of near-term public health headwinds for Euronet, we remain constructive on the company as we still believe it is attractively valued and well run with a strong operational track record.
- Shares of Visa declined as the company issued a lower-than-expected revenue outlook amid new travel restrictions because of the spread of the COVID-19 omicron variant. The stock further plummeted after Amazon announced that it will not accept UK-issued credit cards due to high costs. In our view, the stock's upside is constrained due to industry disintermediation concerns, which will likely result in multiple compression. We are also wary of the negative impact of Amazon's UK-issued credit card policy. However, despite the market's narrative, we believe that Visa's economics should prove resistant to the threat of disintermediation.

Communication Services Detracted From Relative Performance Due to an Underweight

The integration and implementation of 5G continued to be a focus within the sector, with many companies striving to be the leader in

services and products provided on the newest wireless standard. Certain names within the entertainment industry also benefited from the resumption of live concerts and festivals as well as "digital-first" initiatives to attract and maintain a younger viewing audience.

Stock Selection in the Industrials and Business Services Sector Hurt Relative Results

Although higher oil and gas costs along with ongoing supply chain disruptions continued to be a headwind to several names within the sector, the road and rail industry improved on a strong industry backdrop. Airlines suffered toward the end of the period as the new omicron variant led to a slew of flight cancellations.

- GE is a global multi-industrial and financial services company. Although fundamental performance held up for the first half of the period, shares traded lower following its November announcement of plans to complete a three-way breakup of the company over the next several years. GE expects to spin health care into an individual business, then combine its renewable energy, power, and digital segments into another singular entity, leaving its aviation segment as the third standalone business.
- Shares of Airbus fell amid the rapid spread of the COVID-19 omicron variant, which could pose a setback to airlines. Investors appeared cautious on the uncertain outlook for wide-body aircraft and the ongoing recovery in production levels. Despite short-term headwinds, we believe that Airbus has a strong competitive position in a structural growth end market.

Health Care Boosted Relative Performance the Most Due to Stock Selection

Select names within biotechnology and pharmaceuticals continued to benefit from strong drug pipeline advancements, including the more recent authorization of antiviral pills to treat COVID-19. However, despite a return in demand, elective procedures were pared due to a spike in omicron variant-related hospitalizations. Solid quarterly results from a contingent of managed care companies was an area of strength for the portfolio.

- Shares of UnitedHealth Group traded higher following better-than-feared patient-related expenses despite increasing utilization rates. The company also guided earnings growth higher for 2022, signaling expectations for fading coronavirus-related headwinds. We think UnitedHealth is well positioned to benefit in a range of scenarios due to its strong Medicare and Medicaid businesses and other diversified business segments such as pharmacy, technology, and contract research organization.

PORTFOLIO POSITIONING AND ACTIVITY

Positioning in the fourth quarter can largely be characterized by the paring of some large tech positions in favor of "real economy" type names that score well in our four-pillars framework. Outside that theme, we established positions in certain names levered to up-and-coming secular growth markets. We also narrowed our underweight positions in select companies that have performed well in recent months to mitigate the risk of further upward price movement.

Information Technology

Within the information technology sector, we focus on innovative business models that can take advantage of transformational

change. We favor companies with durable business models that address large and growing markets, including electronic payment processing and public cloud computing services.

- We purchased shares of Apple. We believe that the valuation is attractive following a period of relative underperformance. Moreover, we view management's latest forward guidance as conservative given a number of factors that we believe have improved the near- and long-term setup, including market share gains, robust demand signals for its MacBook and iPhone products, and the emergence of advertising as a long-term growth driver.
- We eliminated our position in Zoom Video Communications on reduced risk/reward. Earnings visibility and enterprise performance have been worse than anticipated, and we have less conviction in the medium-term growth outlook as a result. In the long run, we remain encouraged by Zoom's strong product, viral adoption model, and ecosystem strategy that should allow it to maintain competitive leadership.

Communication Services

Within the communication services sector, we continue to find attractive opportunities in companies with innovative business models that can take advantage of transformational change. We favor companies with durable business models that address large and growing markets, including internet search and advertising and social connectivity.

- We eliminated our position in Meta Platforms, formerly known as Facebook, to reflect added uncertainty from App Tracking Transparency initiatives that have caused signal loss for advertisers.
- Sea is an internet platform company operating in greater Southeast Asia. We eliminated our position in Sea amid the growth of "COVID-off" consumer behavior in the many countries where the company's "Free Fire" game operates, which has imposed a larger-than-expected slowdown on the firm's gaming revenue. However, Sea's gaming expansion into the U.S., the second-largest market after China, is an encouraging development.

Consumer Discretionary

The improving economy continued to be a positive for some of the previous laggards in the sector, and the ongoing shift toward e-commerce remained supportive for online retailers. However, the enduring semiconductor chip shortage and supply chain issues were a hindrance to automobiles and consumer electronic production.

- We trimmed our position in Amazon.com. We are mindful of the potential for a growth slowdown in the wake of a pandemic-driven surge in online shopping, as well as rising costs due to supply chain challenges amid the spread of the COVID-19 omicron variant. In our view, Amazon.com has three businesses (e-commerce, cloud computing, and advertising) that are each levered to durable secular growth themes and attacking huge addressable markets and that have plenty of runway left for growth.

MANAGER'S OUTLOOK

Uncertainty around the duration of inflationary pressures remains the primary risk as we look ahead, spurred by continued labor shortages and supply chain disruptions. It's important to keep in mind, however, that longer-term inflation is largely influenced by technology and demographics, two forces that we think will eventually override lingering coronavirus-related labor and supply constraints.

With inflation fears and higher rates on the horizon causing an unwind in growth names with demanding valuations, we shifted our overall exposure modestly closer to "core" on the style spectrum and have taken on a slightly more defensive posture. We'll continue to stick to our same philosophy and approach, relying on our four-pillars framework to identify the most attractive opportunities available.
