

QUARTERLY REVIEW

Overseas Stock Fund – Multi-Class

As of September 30, 2021

PORTFOLIO HIGHLIGHTS

The portfolio underperformed the MSCI EAFE (Europe, Australasia, Far East) Index Net for the three months ended September 30, 2021. From a sector perspective, adverse stock selection drove underperformance and outweighed slightly positive sector allocations.

Relative Performance Drivers:

- Health care stocks detracted from relative performance due to unfavorable selection.
- The consumer discretionary sector weighed on relative returns owing to adverse stock selection.
- Industrials and business services stocks contributed to relative performance due to positive selection.
- The financials sector added value due to positive stock selection.

Additional Highlights:

- We have positioned the portfolio to take advantage of the continued rollout of COVID-19 vaccines and the normalization of economic activity in the coming months. Information technology (IT) was the most overweight sector at quarter-end, while industrials and business services was the largest underweight sector.
- We believe that our focus on finding the best trade-offs between fundamentals and valuation will become more important in an environment of reasonably valued stocks amid uncertainty over the delta variant's effect on economic and corporate earnings growth.

Performance data quoted represents past performance and is not a reliable indicator of future performance. Investment return and principal value will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than the performance data quoted. To obtain the most recent month-end performance, visit troweprice.com. Consider the investment objectives, risks, and charges and expenses carefully before investing. For a prospectus or, if available, a summary prospectus containing this and other information, call 1-877-804-2315 or visit troweprice.com. Read it carefully. The Fund's total return figures reflect the reinvestment of dividends and capital gains, if any. The Overseas Stock Fund-Advisor Class started operations on 8/28/15. It shares the portfolio of an existing fund (referred to as "investor class"). The average annual total return figures have been calculated using the performance data of the investor class up to the inception date of the Advisor Class and the actual performance results of the Advisor class since that date. The performance results have not been adjusted to reflect the 12b-1 fee associated with the Advisor Class; had this fee been included, performance would have been lower.

The T. Rowe Price Fund shares the portfolio of an existing fund (the original share class of the fund referred to as the "investor class"). The total return figures for the I Class shares have been calculated using the performance data of the investor class up to the inception date of the I Class (8/28/15) and the actual performance results of the I Class since that date. Because the I Classes are expected to have lower expenses than the Investor Classes, the I Class performance, had it existed over the periods shown, would have been higher. Share prices are subject to market risk, including loss of the money you invest. In addition, there are risks associated with unfavorable currency exchange rates and political or economic uncertainty abroad.

PERFORMANCE REVIEW

International Stocks Decline as Growth Risks Multiply

International stocks declined in the third quarter as global growth headwinds picked up, including a surge in government bond yields that spurred investors to flee richly valued technology stocks, supply chain disruptions, and worries about a potential default for cash-strapped developer China Evergrande Group. The U.S. dollar strengthened against developed and emerging markets currencies after a hawkish Federal Reserve meeting in September raised expectations for a reduction in the central bank's monthly bond purchases and an eventual interest rate hike. Stocks in most developed European markets fell as rising bond yields outweighed signs of economic recovery. UK stocks declined. The Bank of England held its key interest rate steady after its September policy meeting. However, the bank's rate-setting Monetary Policy Committee said that a majority of its members believed that a rate increase is likely "over the coming months" if the economy performs as expected.

Developed Asian markets were mixed: Stocks rose in New Zealand, slumped in Australia and Hong Kong, and ended flat in Singapore. Japanese stocks gained. Japan lifted its state of emergency at the end of September as COVID-19 cases receded and the country's vaccination drive progressed. Emerging markets stocks retreated amid steep declines in Chinese stocks as Beijing's regulatory crackdown on the technology sector intensified. The liquidity crisis surrounding Evergrande also weighed on sentiment as the indebted company missed paying two offshore debt obligations in one week, bringing it closer to what is expected to be one of China's biggest-ever restructurings. Six of 11 sectors in the MSCI EAFE Index fell, led by materials. The energy sector was the largest gainer as oil prices rallied, driven by ongoing supply disruptions in the Gulf of Mexico and a building energy crunch. Near quarter-end, Brent crude surpassed USD 80 per barrel for the first time since 2018.

Health Care Stocks Detracted From Relative Performance

Health care stocks hurt relative returns due to unfavorable selection.

Elekta AB weighed on performance after the Swedish medical technology company, which makes radiation therapy machines to treat cancer and other diseases, reported earnings that disappointed the market, including weaker-than-expected margins due to pandemic-related costs that the company forecast would persist in the second quarter.

Philips detracted from returns on continued litigation fears after the Dutch health care company announced in June the recall of millions of ventilation devices used to treat sleep apnea due to the potentially harmful effects of a sound-dampening foam in the machines. Philips said it increased its provisions costs related to the recall, which weighed on its second-quarter earnings.

Consumer Discretionary Stocks Hurt Relative Returns

The consumer discretionary sector detracted from relative performance owing to negative stock selection.

Asos was a significant detractor after the UK online youth apparel retailer reported weaker-than-expected quarterly earnings in July and said that its sales slowed in June amid coronavirus-related uncertainty and poor weather in the UK. The retailer also forecast continued volatility in the near term due to the pandemic.

Magna International, a Canadian auto parts supplier, weighed on performance after its proposed USD 3.8 billion acquisition of Veoneer in July met a cool market reception. Magna subsequently reported weaker-than-expected quarterly earnings and reduced its full-year revenue forecast due to the global semiconductor shortage that has hit the automotive industry.

Industrials and Business Services Stocks Helped Relative Returns

Industrials and business services stocks added to relative performance due to favorable selection.

Meggitt was a significant contributor. Shares of the UK aerospace and defense company surged to a record after it agreed to be acquired by Parker Hannifin in August and then received a higher counteroffer from TransDigm amid a wave of consolidation among aerospace suppliers.

Technopro Holdings boosted relative performance. Shares of Technopro, Japan's largest third-party provider of information technology engineers, performed well amid strong demand from companies that have rushed to digitize their operations. Like many Japanese staffing companies, Technopro has largely shrugged off COVID-19 headwinds as IT spending in the country has surged.

Financial Stocks Added Value

The financials sector contributed to relative returns due to favorable stock selection.

Tokio Marine, Japan's largest property and casualty insurer, helped relative performance after it reported solid quarterly earnings and announced modest share buybacks over the summer, raising hopes for improved shareholder returns.

AXA boosted relative returns after the French insurer reported above-consensus first-half earnings, helped by strong performance in AXA XL, the company's property and casualty and specialty risk unit that was hit by business interruption and event cancellation claims last year. The results put AXA on track to meet its EUR 1.2 billion earnings target in 2021 with room for greater margin expansion in fiscal 2022.

Regional Attribution Highlights Negative Allocations Drove Underperformance

From a regional perspective, negative allocation decisions drove underperformance and outweighed favorable stock selection.

Canada detracted significantly from relative returns. The portfolio's holdings in Canada, which is not part of the benchmark, recorded losses. Magna International, the auto parts supplier, was a major detractor.

Japan added to relative performance owing to stock selection. Key contributors included IT services provider NTT Data, engineering staffing company Technopro Holdings, and insurer Tokio Marine. However, an underweight allocation to Japan, which outperformed the benchmark, slightly weighed on relative performance.

PORTFOLIO POSITIONING AND ACTIVITY

Our investment process is driven by in-depth fundamental research that seeks to uncover reasonably priced companies that have durable growth prospects and accelerating earnings and

cash flow growth and that benefit from barriers to entry at the industry and product levels. Sector allocations are primarily driven by individual stock selection. Information technology was the most overweight sector at quarter-end, while industrials and business services was the largest underweight sector.

Consumer Discretionary

Our consumer discretionary allocation declined slightly in absolute terms and the sector remained modestly underweight the benchmark.

We added to our holding in Dr. Martens, the UK footwear company that had its initial public offering in early 2021. Dr. Martens has invested heavily in e-commerce and professionalized how its business is operated. We think that management will be successful in expanding into markets where penetration is low but brand awareness is high and increasing direct-to-consumer sales via e-commerce.

Financials

The financials sector represented the largest allocation in absolute terms and remained a large overweight against the benchmark.

We initiated a position in Julius Baer, a highly profitable and cash-generative Swiss private bank that we believe has the capacity to consistently deploy free cash flow through bolt-on acquisitions, dividends, and buybacks. The company has a leading position in Asia, which is shaping up to be a key growth driver.

We reduced our position in French lender BNP Paribas after strong share performance closed the bank's valuation gap versus its peers. Much of our investment thesis for owning BNP Paribas has been realized or is currently priced into its shares. BNP Paribas has shown greater-than-expected cost discipline and our estimates are now below the market's consensus. Given the lack of catalysts for further improvement, we opted to trim our position.

Health Care

Our health care allocation declined in absolute terms and the sector was slightly underweight the benchmark at period-end.

We reduced our holding in Philips after the company said that it would recall millions of sleep apnea machines and ventilators due to a potentially toxic foam used in the devices (see detractors above). We believe that the recall will erode its share of the sleep apnea market. However, Philips said in September that it received regulatory approval for a repair to the recalled devices, which we see as a positive step in rebuilding trust in the company. We maintained a position in Philips.

Industrials and Business Services

The industrials and business services sector remained a significant underweight versus the benchmark. Our exposure to the sector in absolute terms remained broadly unchanged.

We added to our position in Siemens. The German industrial conglomerate reported earnings in August that showed strong growth in its Digital Industries unit and free cash flow that exceeded estimates. Both trends affirmed our investment thesis on Siemens, i.e., its efforts to shed lower-returning, noncore businesses and focus on digitalization of industry and smart infrastructure trends would add value over time.

We reduced our holding in UK aerospace company Meggitt after its shares rallied on news that it agreed to be acquired by Parker Hannifin, a U.S. maker of motion and control technologies, in August. We believe that the deal will be completed by the deadline next year and that the UK government will not block it from happening. We opted to reallocate proceeds into other names with greater upside potential.

MANAGER'S OUTLOOK

Vaccine progress is on track in most developed countries, including importantly in Europe, where leading countries like Germany have caught or surpassed the U.S. in vaccine penetration. Japan is on a similar but delayed train, while individual vaccine resistance in the U.S. will likely keep penetration from going much higher unless stronger incentives are provided by governments or rising mortality from COVID-19 variants. Our base case is that the mRNA vaccines especially will continue to be effective enough to allow opening to continue, even against the delta variant, though the probability of renewed restrictions is rising.

The coronavirus pandemic reinforces our view that China and the West will not resolve their intellectual property and security differences because of the reaction to China's dissembling in the early weeks of the outbreak and the likely policy response to better secure and control critical supply chains. Rising tensions between China and the West are becoming more tangible in company operations and decisions, and the market has become more focused on the conflict due to the rising economic and political risks involved.

China's leadership appears to have come down stridently on the side of minimizing risk to the Chinese Communist Party (CCP) versus the benefits of a thriving private sector, especially among large new-economy players. Increasing CCP control and influence over economic and regulatory entities seems incompatible with long-term economic liberalization and dynamism. Meanwhile, tension remains between a shift toward a more sustainable financial system and economic stimulus.

Beyond COVID-19 variants, the main "known unknown" for equity markets is inflation. Bond yields have declined despite at least transient core inflation driven by labor, material, and goods shortages. Rising wages especially have the potential to set an inflationary feedback loop into motion. Other key questions are how long is "transient" for the Fed doves, who we believe will carry the day, and can bond market vigilantes actually force the Fed's hand any longer given its extraordinary toolkit and propensity to use it.

T. Rowe Price uses the current MSCI/S&P Global Industry Classification Standard (GICS) for sector and industry reporting. T. Rowe Price will adhere to all future updates to GICS for prospective reporting.

The Global Industry Classification Standard ("GICS") was developed by and is the exclusive property and a service mark of Morgan Stanley Capital International Inc, ("MSCI") and Standard & Poor's, a division of The McGraw-Hill Companies, Inc. ("S&P") and is licensed for use by T. Rowe Price. Neither MSCI, S&P nor any third party involved in making or compiling the GICS or any GICS classifications makes any express or implied warranties or representations with respect to such standard or classification (or the results to be obtained by the use thereof), and all such parties hereby expressly disclaim all warranties of originality, accuracy, completeness, merchantability and fitness for a particular purpose with respect to any or such standard or classification. Without limiting any or the foregoing, in no event shall MSCI, S&P, any of their affiliates or any third party involved in making or compiling the GICS or any GICS classifications have any liability for any direct, indirect, special, punitive, consequential or any other damages (including lost profits) even if notified of the possibility of such damages.

Diversification exhibits may not add to 100% due to exclusion or inclusion of cash.

Certain numbers in this report may not equal stated totals due to rounding. Unless otherwise stated, data is as of the report date.

Unless indicated otherwise the source of all data is T. Rowe Price.
