QUARTERLY REVIEW

Spectrum Moderate Allocation Fund

As of March 31, 2024

PORTFOLIO HIGHLIGHTS

The Spectrum Moderate Allocation Fund outperformed the Morningstar Moderate Target Risk Index for the three-month period ended March 31, 2024.

Relative performance drivers (versus the combined index portfolio):

- Selection among large-cap stocks aided relative returns.
- Inclusion of emerging markets and high yield bonds also contributed.
- Conversely, inclusion of real assets equities detracted from performance.

Additional highlights:

- We added to equities and are now overweight relative to bonds. Stocks are supported by firming growth and moderating inflation, positive earnings trends, and more reasonable valuations outside of large-cap growth. Within fixed income, we remain modestly overweight cash relative to bonds. Cash continued to provide attractive yields with Fed rate cuts pushed further out and the yield curve remaining inverted.
- Despite the prominence of macroeconomic factors in driving the sustained rally in stocks and the recent downturn in bonds, we believe that earnings expectations and corporate fundamentals will be a more significant driver of near-term market performance. Key risks to global markets include the impacts of geopolitical tensions, volatility surrounding the central banks' policy divergence, a retrenchment in growth, stubborn inflation, and the trajectory of Chinese growth and policy.

FUND INFORMATION

Symbol	TRPBX
Inception Date of Fund	July 29, 1994
Benchmark	Morningstar Moderate Target Risk
Expense Information (as of the most recent Prospectus)*	0.94% (Gross); 0.75% (Net)
Fiscal Year End	May 31
12B-1 Fee	–
Total Assets (all share classes)	$2,033,390,308.85

*The fund's net expense ratio reflects a permanent waiver of a portion of the T. Rowe Price Associates, Inc. management fee charged to the fund. This waiver is an amount sufficient to fully offset any acquired fund fees and expenses related to investments in other T. Rowe Price mutual funds. T. Rowe Price funds would be required to seek regulatory approval in order to terminate this arrangement.

Performance data quoted represents past performance and is not a reliable indicator of future performance. Investment return and principal value will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than the performance data quoted. To obtain the most recent month-end performance, visit troweprice.com.
The fund's total return figures reflect the reinvestment of dividends and capital gains, if any.

[1] As of August 1, 2012 Combined Index Portfolio consisted of 42% Russell 3000 Index, 18% MSCI All Country World Ex-U.S Net Index, 30% Bloomberg U.S. Aggregate Bond Index, and 10% FTSE 3-Month Treasury Bill Index. July 1, 2008 until July 31, 2012, the Combined Index Portfolio consisted of a range of 42-48% Russell 3000 Index, 12-18% MSCI All-Country World Ex USA Index Net, 30% Bloomberg U.S. Aggregate Bond Index, and 10% FTSE 3-Month Treasury Bill Index. From Inception until June 30, 2008, the Combined Index Portfolio consisted of a range of 51-48% Wilshire 5000 Index , 9-12% MSCI EAFE Index Net, 30% Bloomberg U.S. Aggregate Bond Index, and 10% FTSE 3-Month Treasury Bill Index. The indices or percentages may vary over time. Historical benchmark representations were not restated to reflect the component benchmark changes.

The Spectrum Moderate Allocation Fund-I Class shares the portfolio of an existing fund (the original share class of the fund referred to as the "investor class"). The total return figures for the I Class shares have been calculated using the performance data of the investor class up to the inception date of the I Class (3/23/16) and the actual performance results of the I Class since that date. Because the I Classes are expected to have lower expenses than the Investor Classes, the I Class performance, had it existed over the periods shown, would have been higher.

The fund is subject to the risks of stock investing, including possible loss of principal. The bond portion will be subject to interest rate and credit risk.

The fund(s) may have other share classes available that offer different investment minimums and fees. See the prospectus for details.

PERFORMANCE REVIEW

AI Optimism Boosts Stocks, While Bonds Slip

Global equity markets produced strong first-quarter gains that lifted several broad indexes to all-time highs. U.S. stocks climbed, driven by optimism about the corporate profit potential stemming from advances in artificial intelligence (AI), as well as the Federal Reserve's (Fed's) most recent monetary policy meeting that signaled three quarter-point interest rate cuts by the end of 2024. European equity markets were mostly positive in dollar terms, although oil and natural gas exporter Norway experienced losses during the period. Developed Asian markets were widely mixed in dollar terms, but Japanese shares led the region with strong gains. Stocks in Australia and Singapore rose very slightly, while stocks in New Zealand and Hong Kong declined. Emerging equity markets rose but trailed stocks in developed markets. In Latin America, markets in Peru, Colombia, and Argentina advanced broadly. Turkish shares also jumped as investors were encouraged that the central bank raised interest rates to fight elevated inflation. On the other hand, Chinese stocks slipped slightly as the property market remained in distress and investors were somewhat discouraged that the government had not taken stronger measures to boost the economy.

Global fixed income markets mostly declined in the first quarter as U.S. Treasury interest rates retraced some of their late-2023 declines due to higher-than-expected inflation readings, which in turn led the Fed to keep short-term interest rates steady throughout the quarter. In the investment grade bond universe, sector performance was mixed, with the worst performance from mortgage-backed and Treasury securities. High yield corporate bonds, which are less sensitive to interest rate movements and more sensitive to credit-related trends, produced gains and outperformed the broad investment-grade market. In U.S. dollar terms, bonds in developed non-U.S. markets declined. Switzerland's central bank surprised investors with a quarter-point rate cut on March 21. Official short-term interest rates in England and the eurozone were unchanged, but longer-term bond yields in Europe generally increased. Also, a stronger dollar versus European and British currencies reduced local returns in U.S. dollar terms. In Japan, long-term Japanese government bond yields increased while the yen fell versus the dollar, reaching 34-year lows even though the Bank of Japan decided on March 19 to lift its benchmark interest rate out of negative territory.

Security Selection

Selection Among U.S. Large-Cap Equities Contributed

U.S. stocks produced strong first-quarter gains that lifted several broad indexes to all-time highs, aided by tailwinds from enthusiasm linked to the potential for artificial intelligence to boost profits, which translated to strong returns from the information technology sector. Within the S&P 500 Index, the communication services and energy sectors fared best, while only the real estate sector posted losses.

• U.S. large-cap value equities aided relative performance due to stock selection as the allocation outpaced its style-specific benchmark.
Stock choices in the industrials and business services sector were a notable contributor to relative results, driven by holdings in industrial conglomerates. Selection within the health care and financials sectors aided results as well.

• Security selection within the U.S. large-cap growth stock allocation also added value. The information technology sector contributed to relative results due to stock selection. Stock choices in consumer discretionary also had a positive impact, driven by positioning in automobiles.

• Selection among U.S. large-cap core equities aided relative performance as this allocation outperformed its style-specific benchmark. Stock picks in the information technology sector, driven by holdings in the semiconductors and semiconductor equipment
industry, positively contributed to performance. Selection within the consumer discretionary and utilities sectors aided results as well.

Selection Among International Equities Detracted

International equities rose during the first quarter as investors hoped that easing inflation pressures would enable central banks to reduce short-term interest rates. The MSCI EAFE Index produced strong positive returns during the period, led by the information technology and consumer discretionary sectors.

• Selection among international equities detracted during the quarter. Stock picks within the health care and financials sectors were the leading drivers of underperformance during the period. Regionally, security selection within developed Europe also weighed on relative results.

Tactical Allocation

Overall, tactical allocation decisions had a muted impact on relative results. An overweight allocation to equities initiated during the period aided relative performance as equities strongly outperformed bonds. However, this impact was mostly offset by an unfavorable overweight allocation to real assets equities. An overweight to cash relative to bonds was also favorable.

Structural Effect

Exposure to Real Assets Equities Detracted

The inclusion of real assets equities detracted from relative returns for the quarter. Although the sector produced slight gains, it trailed the broader equity market. Within energy, oil prices climbed throughout the quarter and reached four-month highs in March. Natural gas prices in the U.S. fell to their lowest levels since the early 1990s as mild weather depressed demand and supply levels remained elevated. Global and U.S. real estate markets also edged lower during the period amid expectations for higher-for- longer interest rates.

Emerging Markets and High Yield Bonds Contributed

Exposure to emerging markets and high yield bonds added value over the period. High yield and emerging markets debt advanced thanks to steady risk-appetite, investor preference for higher-yielding securities, and data indicative of resilient global growth

PORTFOLIO POSITIONING AND ACTIVITY

We added to risk assets during the period, most notably with respect to our overall allocation to stocks relative to bonds. As positive sentiment sustained the risk-on rally that has marked markets over recent periods, this decision was a source of added value over the short term. However, we continue to evaluate long-term valuations along with the durability of current economic growth as we assess compelling opportunities and potential risks through the remainder of the year.

Favor Stocks Over Bonds

We added to equities and are now overweight relative to bonds. Stocks are supported by firming growth and moderating inflation, positive earnings trends, and more reasonable valuations outside of large-cap growth. Within fixed income, we remain modestly overweight cash relative to bonds. Cash continued to provide attractive yields with Fed rate cuts pushed further out and the yield curve remaining inverted.

Neutral Between U.S. and International Equities

We are neutral between U.S. and international equities. Within the U.S., earnings expectations are improving as economic activity remains resilient and financial conditions are loosening. Technology and pharmaceutical innovations are a key differentiator. However, valuations may have limited upside. Valuations for international equities appear attractive on a relative basis, but European equities remain challenged with most economic indicators bottoming. Chinese economic growth appears to have stabilized.

Favor U.S. Value Over Growth

We are underweight to growth equities relative to value equities. An improving economic outlook and better financial conditions could be supportive for value, and higher-for-longer rates and improving prospects for energy demand should also be positive for value-oriented sectors.

Favor Real Assets Over Global Equities

We are overweight to inflation-sensitive real assets equities as their valuations are attractive and offer an effective potential hedge to stickier inflation. Additionally, oil prices may be set for structural increases due to peaking productivity over the intermediate term and rising geopolitical tensions over the near-term.

High Yield Bonds

We remain overweight to high yield bonds on still-attractive absolute yield levels and reasonably supportive fundamentals.

Floating Rate Loans

Valuations and yields remain attractive on less aggressive Fed cut expectations. The default rates are expected to rise but should be contained to certain names.

Long-Term U.S. Treasuries

We are neutral to long-term U.S. Treasury bonds as longer-term yields are biased higher on increased supply, resilient growth, and stickier inflationary backdrop.

MANAGER'S OUTLOOK

The rising tide in global equities continued its advance in the year's first quarter, while fixed income markets experienced losses. Market sentiment has been lifted by positive corporate profits and enthusiasm surrounding artificial intelligence. However, the Federal Reserve has signaled that it will delay interest rate cuts further into the future after higher-than expected inflation data in February gave the central bank cause for caution. Japan's more accommodative monetary policy, which has been notably out of step with other major central banks, pivoted when it raised interest rates in March for the first time since 2007. Meanwhile, the European Central Bank may begin cutting interest rates earlier than expected due to decelerating inflation and fragile growth in the eurozone. Although uncertainty remains surrounding the timing of interest rate cuts, we do see positive indicators in the fight to tame inflation, such as stabilizing energy costs as well as an uptick in unemployment and slowing wage growth without signs of deterioration in economic conditions. The path ahead for China is also uncertain, especially with the country's ongoing property crisis, but we are seeing incremental economic improvement that may bolster consumer confidence and be further supported by policy changes aimed at stabilizing the country's economy. Despite the prominence of macroeconomic factors in driving the sustained rally in stocks and the recent downturn in bonds, we believe that earnings expectations and corporate fundamentals will be a more significant driver of near-term market performance. We also think volatility may increase with the coming U.S. presidential election, and a resilient labor market along with wage growth, which could cause the Fed to keep rates high if it significantly increases, could pose economic headwinds as financial conditions tighten. Against this backdrop, we are mindful of maintaining liquidity given both attractive higher-quality, short-term yields, and for the potential to add to risk assets should volatility create attractive opportunities. Key risks to global markets include the impacts of geopolitical tensions, the central banks' policy divergence, a retrenchment in growth, a resurgence in inflation, and the trajectory of Chinese growth and policy. While we increased allocations to risk assets during the recent period given the potential upward inflection in earnings, we continue to evaluate long-term valuations along with the durability of current economic growth as we seek to assess compelling opportunities and potential risks through the remainder of the year.

Diversification cannot assure a profit or protect against loss in a declining market.

[1] Value Added: The performance difference between the fund and its Combined Index Portfolio.

[2] Allocation Effect: The allocation effect identifies value added as a result of asset class variances away from neutral allocations. The primary sources of the value added measured by this effect are the tactical allocation decisions made by the Asset Allocation Committee.

[3] Security Selection Effect: This measures the value added by underlying investment sectors relative to their respective benchmark.

[4] Structural Effect: The impact of any differences between the fund's strategic neutral design and its benchmark, including the use of investment sectors that are not represented in the benchmark, and the performance differences between an asset class and the underlying investment sectors chosen to represent it.

[5] Other: If applicable, reflects the impact of intra-month cash flows and rebalancing transactions.

Figures are shown gross of fees. Returns would be lower as a result of the deduction of such fees. Performance for each security is obtained in the local currency and, if necessary, is converted to U.S. dollars using an exchange rate determined by an independent third party.

Please refer to the Performance table on page 1 for the definition of the Combined Index Portfolio.

PORTFOLIO MANAGEMENT

Portfolio Manager:	Managed Fund Since:	Joined Firm:
Charles Shriver	2011	1991
Toby Thompson	2020	1993

Fund Information

	Spectrum Moderate Allocation Fund	Spectrum Moderate Allocation Fund - I Class
Symbol	TRPBX	TPPAX
Expense Information*	0.94% (Gross) 0.75% (Net)	0.81% (Gross) 0.62% (Net)
Fiscal Year End	5/31/21	5/31/21
12B-1 Fee	–	–

*The fund's net expense ration reflects a permanent waiver of a portion of the T. RowePrice Associates, Inc. management fee charged to the fund. This waiver is an amount sufficient to fully offset any acquired fund fees and expenses related to investments in other T. Rowe Price mutual funds. T. Rowe Price funds would be required to seek regulatory approval in order to terminate this arrangement.

The Spectrum Moderate Allocation Fund is co-managed by Charles Shriver and Toby Thompson. The portfolio managers are responsible for the strategic design and day-to-day management of the Fund. This includes portfolio design, positioning, performance, and risk-management oversight. The Fund's tactical asset allocation decisions are made by the firm's Asset Allocation Committee. The Committee is co-chaired by Charles Shriver and David Eiswert, and includes some of the firm's most senior investment management professionals across major asset classes.

Individual security selection is made by portfolio managers of the Fund's component strategies drawing on the fundamental insights of T. Rowe Price's team of around 200 global research analysts.

ADDITIONAL DISCLOSURES

Consider the investment objectives, risks, and charges and expenses carefully before investing. For a prospectus or, if available, a summary prospectus containing this and other information, call 1-800-638-7890 or visit troweprice.com. Read it carefully.

The manager's views and portfolio holdings are historical and subject to change. This material should not be deemed a recommendation to buy or sell any of the securities mentioned. The specific securities identified and described do not represent all of the securities purchased, sold, or recommended for the Fund and no assumptions should be made that the securities identified and discussed were or will be profitable.
