

STRATEGY HIGHLIGHTS

As of 30 September 2020

Euro Corporate Bond Strategy

Total Strategy Assets:¹ €250.4 million²

Figures are Calculated in Euros

INVESTMENT APPROACH

- Focus primarily on corporate bonds denominated in euros.
- Integrate proprietary credit and capital markets research to identify market inefficiencies.
- Add value primarily through individual security selection, sector rotation, and term-structure positioning.
- Credit research is the most important element of our corporate bond process and includes credit analysis and relative value assessment.
- Risk management is central to our process, with diversification by issuer and industry the most important elements in our approach.

PORTFOLIO CONSTRUCTION

- Duration is maintained within a range of +/- 0.25 of a year from the benchmark
- Diversified sector exposure
- Maximum 3.0% overweight per issuer
- Up to 20% of the portfolio can be invested in non-investment grade issues
- Average tracking error expected to range between 100 and 150 bps per annum

INDICATIVE BENCHMARK

- Bloomberg Barclays Euro-Aggregate: Corporates Bond Index

PORTFOLIO MANAGEMENT

David Stanley

Lead Portfolio Manager

- 32 years of investment experience;
- 16 years with T. Rowe Price.
- B.A., University of Manchester

Howard Woodward, CFA

- 20 years of investment experience;
- 20 years with T. Rowe Price.
- B.Sc., University of Bristol

PORTFOLIO SPECIALISTS

Stephen Marsh, CFA

- 19 years of investment experience;
- 5 years with T. Rowe Price.
- B.A., University of Central Lancashire

¹ Includes a sub-fund of the T. Rowe Price Funds SICAV. No separate accounts are currently managed in this strategy. Assets reported are As of 31 March 2020 and were current on date of production.

² Assets reported are as of 30 June 2020 and were current on date of production.

PORTFOLIO CHARACTERISTICS

	Representative Portfolio ¹	Bloomberg Barclays Euro-Aggregate: Corporates Bond Index
Weighted Average Coupon	1.87%	1.66%
Weighted Average Maturity	5.39 Years	5.59 Years
Weighted Average Duration	5.06 Years	5.21 Years
Current Yield	-	-
Yield to Worst	1.17%	0.52%

Past performance is not a reliable indicator of future performance.

¹ Net of fees performance reflects the deduction of the highest applicable management fee ("Model Net Fee") that would be charged based on the fee schedule appropriate to you for this mandate, without the benefit of breakpoints. Please be advised that the composite may include other investment products that are subject to management fees that are inapplicable to you but are in excess of the Model Net Fee. Therefore, the actual performance of all the portfolios in the composite on a net fee basis will be different and may be lower than the Model Net Fee performance. However, such Model Net Fee performance is intended to provide the most appropriate example of the impact management fees would have by applying management fees relevant to you to the gross performance of the composite. Past performance cannot guarantee future results.

Supplemental information. See "GIPS® Disclosure" for additional performance information. Valuations and performance are computed in US Dollars and converted to euros. When converting US Dollar composite returns, benchmarks, dispersion, and asset data, the same exchange rate source is used consistently. Total returns in non-US dollar performance by the percent change in the US dollar/foreign currency exchange rate (as determined by an independent third party) for the time periods selected. For sourcing information, please see Additional Disclosures.

RISK/RETURN CHARACTERISTICS

Five Years Ended 30 September 2020

Past performance is not a reliable indicator of future performance.

Statistics based on monthly gross returns. Returns would have been lower as the result of the deduction of applicable fees.

Past performance is not a reliable indicator of future performance. Monthly composite performance is available upon request. **See below for further information related to net of fee calculations.**

² Preliminary - subject to adjustment.

T. Rowe Price (TRP) has prepared and presented this report in compliance with the Global Investment Performance Standards (GIPS®). TRP has been independently verified for the 23-year period ended June 30, 2019 by KPMG LLP. The verification report is available upon request. Verification assesses whether (1) the firm has complied with all the composite construction requirements of the GIPS standards on a firm-wide basis and (2) the firm's policies and procedures are designed to calculate and present performance in compliance with the GIPS standards. Verification does not ensure the accuracy of any specific composite presentation.

TRP is a U.S. investment management firm with various investment advisers registered with the U.S. Securities and Exchange Commission, the U.K. Financial Conduct Authority, and other regulatory bodies in various countries and holds itself out as such to potential clients for GIPS purposes. TRP further defines itself under GIPS as a discretionary investment manager providing services primarily to institutional clients with regard to various mandates, which include U.S., international, and global strategies but excluding the services of the Private Asset Management group. The minimum asset level for equity portfolios to be included in composites is \$5 million and prior to January 2002 the minimum was \$1 million. The minimum asset level for fixed income and asset allocation portfolios to be included in composites is \$10 million; prior to October 2004 the minimum was \$5 million; and prior to January 2002 the minimum was \$1 million. Valuations and performance are computed in U.S. dollars and converted to Euro. When converting U.S. dollar composite returns, benchmarks, dispersion and asset data, the same exchange rate source is used consistently. Total returns in non-U.S. dollar currencies are calculated by adjusting U.S. dollar performance by the percent change in the U.S. dollar/foreign currency exchange rate (as determined by an independent third party) for the time periods selected.

Gross performance returns are presented before management and all other fees, where applicable, but after trading expenses. Net of fees performance reflects the deduction of the highest applicable management fee that would be charged based on the fee schedule contained within this material, without the benefit of breakpoints. Gross and net performance returns reflect the reinvestment of dividends and are net of nonreclaimable withholding taxes on dividends, interest income, and capital gains. Effective June 30, 2013, portfolio valuation and assets under management are calculated based on the closing price of the security in its respective market. Previously portfolios holding international securities may have been adjusted for after-market events. Policies for valuing portfolios, calculating performance, and preparing compliant presentations are available upon request. Dispersion is measured by the standard deviation across asset-weighted portfolio returns represented within a composite for the full year. Dispersion is not calculated for the composites in which there are five or fewer portfolios.

Some portfolios may trade futures, options, and other potentially high-risk derivatives which generally represent less than 10% of a portfolio.

Benchmarks are taken from published sources and may have different calculation methodologies, pricing times, and foreign exchange sources from the composite.

Composite policy requires the temporary removal of any portfolio incurring a client initiated significant cash inflow or outflow greater than or equal to 15% of portfolio assets. The temporary removal of such an account occurs at the beginning of the measurement period in which the significant cash flow occurs and the account re-enters the composite on the last day of the current month after the cash flow. Additional information regarding the treatment of significant cash flows is available upon request.

The firm's list of composite descriptions and/or a presentation that adheres to the GIPS® standards are available upon request.

ADDITIONAL DISCLOSURES

Portfolio Construction: There is no guarantee that the investment will remain within the anticipated ranges of exposure.

The information shown does not reflect any exchange-traded funds that may be held in the portfolio.

T. Rowe Price uses the current MSCI/S&P Global Industry Classification Standard (GICS) for sector and industry reporting. T. Rowe Price will adhere to all updates to GICS for prospective reporting.

Diversification exhibits may not add to 100% due to exclusion or inclusion of cash.

Sources for Credit Quality Diversification: Moody's Investors Services, Standard & Poor's, and Fitch. If each rating agency rates a security, the median rating is used. If only two rating agencies rate a security, the most conservative rating is used. If there is only one rating, that rating is used.

Numbers may not total due to rounding.

The representative portfolio is an account in the composite we believe most closely reflects current portfolio management style for the strategy. Performance is not a consideration in the selection of the representative portfolio. The characteristics of the representative portfolio shown may differ from those of other accounts in the strategy. Please see the GIPS disclosure page for additional information on the composite.

OBJECTIVES AND RISKS

The Euro Corporate Bond Composite seeks current income and capital appreciation primarily through investment in corporate fixed income securities denominated in euros. The strategy may invest in preferred stock and other transferable debt securities, including those issued by the governments of countries participating in the euro.

Risks – the following risks are materially relevant to the portfolio:

- **Country risk (Russia and Ukraine)** - in these countries, risks associated with custody, counterparties and market volatility are higher than in developed countries.
- **Credit risk** - a bond or money market security could lose value if the issuer's financial health deteriorates.
- **Default risk** - the issuers of certain bonds could become unable to make payments on their bonds.
- **Derivatives risk** - derivatives may result in losses that are significantly greater than the cost of the derivative.
- **Emerging markets risk** - emerging markets are less established than developed markets and therefore involve higher risks.
- **Interest rate risk** - when interest rates rise, bond values generally fall. This risk is generally greater the longer the maturity of a bond investment and the higher its credit quality.
- **Liquidity risk** - any security could become hard to value or to sell at a desired time and price.
- **Sector concentration risk** - the performance of a portfolio that invests a large portion of its assets in a particular economic sector (or, for bond portfolios, a particular market segment), will be more strongly affected by events affecting that sector or segment of the fixed income market.

General Portfolio Risks

- **Capital risk** - the value of your investment will vary and is not guaranteed. It will be affected by changes in the exchange rate between the base currency of the portfolio and the currency in which you subscribed, if different.
- **Counterparty risk** - an entity with which the portfolio transacts may not meet its obligations to the portfolio.
- **Geographic concentration risk** - to the extent that a portfolio invests a large portion of its assets in a particular geographic area, its performance will be more strongly affected by events within that area.
- **Hedging risk** - a portfolio's attempts to reduce or eliminate certain risks through hedging may not work as intended.
- **Investment portfolio risk** - investing in portfolios involves certain risks an investor would not face if investing in markets directly.
- **Management risk** - the investment manager or its designees may at times find their obligations to a portfolio to be in conflict with their obligations to other investment portfolios they manage (although in such cases, all portfolios will be dealt with equitably).
- **Operational risk** - operational failures could lead to disruptions of portfolio operations or financial losses.
