INVESTMENT APPROACH

- The Target Funds invest in a diversified portfolio of T. Rowe Price stock and bond funds with an increasing allocation to bonds over time. Each Target Fund's allocation between stock and bond funds will change over time. The funds maintain a substantial allocation to equities both prior to and after the target date, which can result in greater volatility over shorter time horizons.

DISTINGUISHING CHARACTERISTICS

1. Significant experience in managing balanced/asset allocation portfolios.
2. Seeks to support accumulation prior to retirement and withdrawal over a moderate withdrawal horizon, while moderating the risk of principal loss at the target date.
3. Tactical allocations to incorporate market outlook.
4. Strong underlying active management drives excess positive return potential.
5. Allocations continue to shift during retirement.
6. No asset allocation overlay fee and competitive expense ratios.

GLIDE PATH

- Target Funds do not reach a static mix at or near expected retirement.
- Reallocation to a more conservative asset mix over time out to 30 years past expected retirement date.
- Minimum equity exposure of approximately 30% reached 30 years after expected retirement date.

IMPORTANT CHANGES TO THE TARGET DATE FUNDS: T. Rowe Price is making changes to the glide path of our target date funds. The glide path will be transitioning to the allocations shown above. Specifically, beginning in the second quarter of 2020, the funds' glide path will gradually change to increase its overall equity allocation at certain points and accordingly decrease its bond allocation. Note that there will be no change to the allocation at the target retirement date. For example, the equity allocation at the beginning of the enhanced glide path will be increasing from the original 90% allocation and will be increasing from the original 20% allocation at the end of the glide path. Adjustments to equity and bond allocations will be made incrementally, and we expect the transition to the enhanced glide path to be completed in the second quarter of 2022, depending on market conditions. The 2065 vintage follows the enhanced glide path and does not have a transition period. Please see the prospectus for additional details.

The T. Rowe Price Target Funds are an array of professionally managed investment portfolios designed to gradually alter the investment mix over time, providing broad diversification to investors throughout the specific stages of their retirement planning. Diversification cannot assure a profit or protect against loss in a declining market. For Sourcing Information, please see Additional Disclosures.

- The asset mix represents strategic and tactical asset allocation decisions.
- Tactical allocations to incorporate market outlook.

¹The principal value of the Target Funds is not guaranteed at any time, including at or after the target date, which is the approximate year an investor plans to retire (assumed to be age 65) and likely stop making new investments in the fund. If an investor plans to retire significantly earlier or later than age 65, the funds may not be an appropriate investment even if the investor is retiring on or near the target date. The funds' allocations among a broad range of underlying T. Rowe Price stock and bond funds and derivatives will change over time. The funds emphasize asset accumulation prior to retirement, balance the need for reduced market risk and income as retirement approaches, and focus on supporting an income stream over a moderate postretirement withdrawal horizon. The funds are not designed for a lump-sum redemption at the target date and do not guarantee a particular level of income. The funds maintain a significant allocation to equities both prior to and after the target date, which can result in greater volatility. Derivatives may be riskier or more volatile than other types of investments because they are generally more sensitive to changes in market or economic conditions.
