

Real Assets Fund

Total Global Real Assets Equity Strategy Assets:¹ \$9.5 billion² | **Total Fund Assets:** \$4.9 billion²

INVESTMENT APPROACH

- The strategy seeks to improve the long-term risk/return profile of a diversified equity portfolio by dampening the sensitivity to material changes in the prevailing inflation regime.
- The fund is designed as an asset allocation product that invests in the securities of companies that are engaged in activities related to real assets.
- “Real Assets” are assets that have physical properties, such as energy and natural resources, real estate, basic materials, equipment, utilities and infrastructure, and commodities. Such assets may produce cash flows and subsequent valuations that increase when the overall price level in the economy is rising.
- The fund is expected to respond more favorably to periods of high or rising inflation than the broad equity market does (where broad equity returns are relatively weak) at the cost of less favorable returns during periods of low or falling inflation (where broad equity returns are relatively strong). Thus, as a strategic component of a diversified portfolio, it seeks to dampen the long term volatility of the real (inflation-adjusted) returns of such a portfolio, which is expected to result in a relatively more consistent growth of capital for a long-term investor.
- Because the fund focuses its investments in certain industries that involve activities related to real assets, the fund is more susceptible to adverse developments affecting one or more of these industries and may perform poorly during a downturn in any of those industries. Since there is no limit on the fund's investments in foreign securities or emerging markets, it will be subject to the risk that some holdings will lose value because of unfavorable currency exchange rates or adverse political or economic developments overseas. Diversification cannot assure a profit or protect against loss in a declining market.

PORTFOLIO CONSTRUCTION

- Invests primarily in equity securities rather than in direct real assets.
- Typically 300-350 names in portfolio.
- Individual position sizes generally less than 5% of total assets.
- Global orientation.
- Broadly diversified across real asset sectors and market capitalization.

BENCHMARK

- MSCI All Country World Index Net
- Combined Index Portfolio*

¹ Includes a U.S.-registered mutual fund, common trust funds, and subadvised portfolios.

² Assets reported are as of December 31, 2021.

*Please see Performance section for further information.

Past performance is not a reliable indicator of future performance. Figures are calculated using monthly data and are net of fees.
 *Please see Performance section for further information.

ADDITIONAL DISCLOSURES

Portfolio Construction: There is no guarantee that the investment will remain within the anticipated ranges of exposure.

Active Share is a holdings based measure of active management representing the percentage of a portfolio's holdings that differ from those in its benchmark. Compared to tracking error, which measures the standard deviation of the difference in a manager's returns versus the Benchmark returns, Active Share allows investors to get a clearer understanding of what a manager is doing to drive performance, rather than drawing conclusions from observed returns. The greater the difference between the asset composition of a product and its benchmark, the greater the active share is.

Unless indicated otherwise the source of all data is T. Rowe Price.
